

I viewed with the horror the visual presentation illustrating the coverage of solar panels on agricultural land by this (and other proposed) projects. The impact is significant and will have huge repercussions for local residents and visitors in terms of their mental health, enjoyment of and connection with, the landscape as well discouraging people from actively wanting to visit and stay in this part of Lincolnshire. The people and small businesses who rely on this would be negatively impacted. The Prime Minister has just visited this region and in an interview he claimed he wanted to protect food production and to protect prime agricultural land. This project, along with the others, is a mockery of that claim!
