

cumulative effect if the number of projects in the area are not being considered

The, size and scale of the development is too large

The low electricity generation versus loss of land is too large.

, the loss of valuable agricultural land is too large. We should be trying to be more self sufficient and reduce import

The , visual impact is significant. Currently green and will become industrial

, well-being of villages will be impacted by trucks etc during building and then by views after

the lack of use of brownfield land is shocking, we should not be reducing green/ farmland

rooftops, nuclear, wind, tidal should be developed not huge solar farms
