

I am very concerned about the following issues.

1. The destruction of the environment as hedges are ripped out, security fences erected, grass strips are lost and the loss of the benefit of agricultural crops being grown to wild animals, insects and birds .
 2. The cumulative effect, size and scale of the developments which will effect the mental and physical health of an estimated 40,000 people. This 10,000 acre proposed site is a public health disaster waiting to happen.
 3. The low electricity generation versus loss of land - it is well known that solar is not that effective in this region.
 4. The loss of valuable agricultural land at a time when we should be guarding food security carefully with a war on the edge of Europe.
- Solar panels should be placed on industrial roofs, house roofs and on brown field sites and contaminated land.
