

I hope you have seen enough evidence from the public submissions and seen the vast opposition to this solar farm. The Applicant's reports are at times very subjective promising many benefits, they seem to say that even if the whole area was covered in solar panels and batteries, it would be an improvement. Well we are nearly there! They have been unprofessional and I personally cannot take them seriously. Rural populations want to keep the rich agricultural heritage in Lincolnshire and not see it sold out to the highest bidder. Solar targets can be achieved without all these monstrosities covering our farmland and landscape. I am frustrated that the general public feel that they are left to fight against something so wrong and damaging. This type of mass development is horrific. This ever expanding list of local solar farms is nothing more than a free for all which is terrorising rural Lincolnshire. The whole thing needs slowing down and planning properly.
