Subject: Public opinion

You don't often get email from [REDACTED]

If public opinion and consultation count for anything, you should be told time and time again, solar panels belong in built up areas, industrial buildings roofs with existing energy infrastructure, run out of these first. The use of greenbelt, food production land is bordering on criminal destruction of traditional farming land and supporting communities. It has all the appearance of deliberate and insidious targeting of UK food security, has nothing been learned from the recent past of empty shop shelves. It's nothing short of agricultural vandalism. Net Zero is a questionable policy if it costs the UK and estimated £300billion to make no difference whatsoever globally. Increasingly the public just don't buy into the countryside catastrophe this project is a part of. within a few years the panels will be less efficient because current technology isn't good enough
In just a few decades the panels will be landfill and other energy sources will have overtaken. As you will be aware the huge geo-engineering programme spraying over Britain will ensure that insufficient sun will be available to make the panels of ant significant contribution.
All in all the solar farm proposed has way too many negatives and sacrifices just so the Minister for energy van virtue signal whilst the taxpayers, farming and rural communities will pay the price

Regards
Les Allen
