

The solar proposal will significantly alter the appearance of the local landscape.

We would really like to have solar panels in our neighbourhood but they should be placed in an area where they are compatible i.e. on the roofs of industrial buildings, by roads, car parks etc. the proximity to the converter station plus the paramount need for sustainable energy are all well understood so please help us in the village to make the best advantage of our landscape by erecting windmills for the super windy days and put the solar panels in an industrial situation (car parks, factory roofs, motorway services the opportunity is endless). Please don't mess up our beautiful village with traffic and building works and fences and security lights.
