Dear Examiners

In response to your written questions issued 13th September 2024

Q1.16.5 Vibration

Do the provisions of the Outline Construction Noise and Vibration Plan [REP2-044] address your concerns about vibration [REP1-086]? If not, please explain your conclusion.

We remain concerned about vibration based on our experiences to date of occasional works that have been undertaken near our property. The reference to the Outline Construction Noise and Vibration Plan [REP2-044] with frequent references made to 'where practical' are open to interpretation and do not address our concerns.

The works to date that we have experienced have been towards the South, East and West of our property where instances of Limestone are found. We do not know how far these Limestone features extend and would appreciate more detail from Geological studies that have been undertaken as to the locations of these features which can then be compared to construction activity sites to enable a more knowledge based assessment to be made, particularly given the piling works and foundation works that will cover a large area in relative close proximity to our property.

Yours Sincerely
Martyn & Margaret Hussey
