

Item on which the ISH7 finished last night was at last a discussion about the dangers of travelling through the route Lime Lane by both proposed Byers Gill and constructed Whinfield.

Reference Pier Assessment for Byers Gill and under Visual photographs, an early version of Visualisation Apps in the d DCO Byers Gill, seek..... Viewpoint 4 Lime Lane near Ricknall lane Figure 7.6. in the pier assessment .

I believe there have been other versions of this particular viewpoint showing High House Farm and what I call the satellite site, the Spur.

I cannot find this view from Lime lane road in the present d DCO.

It is photographed just past the Dog Leg junction which is an accident blackspot with a blind bend. The potential here for an inexperienced lorry driver to capture glint and glare from the Spur in the valley below

the farmhouse, see dotted white lines. Note also High House Farm and setting described as full of visual amenity, a non designated

heritage asset and a landscape of character. ref freely available

Committee Report on Whinfield Solar Farm Durham County Council site. You will also find there responses to the Whinfield.

3 responses only at that time. Identified exactly IN 2021 the elements of your discussion ISH7 on Lime Lane and its potential for accidents.
