Express my concern over this large scale development.

Change in use of productive farmland. The point should be noted you cannot solve one problem by creating another one. Any good business works on this principle.

With the prime minister recently declare “we must leave the planet in a better state than we found it” then what is the plan for the equipment when it goes out of use either by way of the following:

Technology is out of date or it breaks down and is beyond repair

If we are a responsible it is not sustainable when you consider how many are needed to make this much electricity.

When you consider legislation is in place to ensure white goods are the responsibility of the manufacturers. There must be a plan on what will happen to solar panels? Can you publish what it is ?

Impact on nature

It has been said bird life has been so impacted from previous developments people have to go and collect in and dispose of the birds.

What do they plan to do to mitigate this in the current developments?

Please add these points to be considered.
