

The main concerns of a Bess (Battery Storage Storage System) is the size of the shipping containers, and how many there will be situated on the site and the noise from the site, and how close they are to residential properties. If the BESS is operational for 60 years which I know it will be, how many incidents will happen over those years one incident is too many for me, but I know there will be more, these containers are not safe made of metal that will be hot in summer what if they over heat causing a Battery Unit to spark which could cause a significant explosion causing a major fire, which cannot be put out by the Fire Brigade, they can only cool the other Battery Storage Containers down, the fire has to burn itself out, so then we have a fire that will take days to go out, causing TOXIC fumes from Thermal runaway, not knowing what harm they will do us in the short term, and in the long term, and my concerns of contamination of the farmland, and the wildlife. The thought of living near a Battery Storage System is so frightening and a constant dread, this has caused me to be very anxious, and stressed, I feel that my quality of life will be destroyed constantly worried, also the community feel off the village will change, the look of the village will change which is so very disheartening.
