

I would like to object to this application for the following reasons

1 it will completely industrialise the now rural area with security fencing which spoils the whole reason for living in the countryside

2. Although I'm not against farmers diversifying and believe it to be a good use of poor inland fields this is not the case as the fields they have selected are surrounding villages and roads from which the public cannot escape them

3 there is an abundance of poor quality land that is inland and adjacent the current suggested fields that would suit the development with out impacting so heavily on the community and rural areas.

If this is of national importance and this is the best location for a scheme of this size then let's do it in the least invasive way as possible and not ruin a whole rural community! These fields are the result of a few local land owners gaining all the benefits and is not In the interest of the nation or the locals.
