

I am 100% against this industrialisation of the countryside for the following reasons

Use of good farmland that should be used for food security and NOT for solar energy.

This park is the largest planned in the UK so far and will completely devastate and ruin a farming community who live and thrive all based on farming.

The area is made up of 5 farms so how can this be classed as one application as all parcels of land must be classed as individual in planning requirements.

The height of the panels have been stated as 3.8m and once again this will be an eyesore and will not fit within the natural environment.

Why have the developers not asked other local land owners to rent fields that are not near houses and roads that would have less impact on the local community. In my opinion this was poor and unresearched from the developer.

40 years is not a temporary solution and goes against local planning laws and recommendations.

Noise will be a significant issue where we live in a tranquil area and this development will impact on our wellbeing.

Solar Farms are not environmentally friendly, and disposal of the panels are a major problem and in 40 years it would be highly unlikely to put the land back to agricultural use, this is very short sighted.

The roads and infrastructure in this area is poor and it will find it very difficult to deal with the traffic to build the size of the development.

this area already has bio digesters and wind turbines. The land in question is used for the spreading of the cake that comes from the local digester plant and this raises a question of where the cake will be disposed of.

The sheer size this development will have a huge impact on the area and also the wellbeing of the people who have moved here for a certain lifestyle away from the towns and cities.

I strongly oppose this development.
