# 1. Introduction

#### 1.1 Introduction

- 1.1.1 This document provides the framework for the Decommissioning Environmental Management Plan (DEMP) for East Yorkshire Solar Farm (hereafter referred to as 'the Scheme'). A detailed DEMP will be produced for the Scheme prior to the date of decommissioning.
- 1.1.2 A Development Consent Order (DCO) would provide the necessary authorisations and consents for the Scheme which comprises the construction, operation (including maintenance) and decommissioning of a solar photovoltaic (PV) electricity generating facility with a total capacity exceeding 50 megawatts (MW) and export connection to the national grid, at National Grid's Drax Substation, and associated infrastructure. The Scheme is classified as a Nationally Significant Infrastructure Project (NSIP) under Sections 14(1)(a) and 15(2) of the Planning Act 2008 (Ref. 2).
- 1.1.3 Decommissioning comprises the process of removing all solar PV infrastructure including Solar PV Panels, mounting structures, cabling, inverters, transformers and switchgear, and other associated infrastructure for recycling or disposal in accordance with good practice and market conditions at that time.
- 1.1.4 Within the Solar PV Site the physical infrastructure will be removed to plough depth at the Site and the land returned to the landowners. This will include the areas of agricultural land where the agricultural resource has been maintained (and potentially improved) during operation, and the established habitats. Post-decommissioning, the landowner may return the Site to its original use. It is anticipated that some areas of habitat and biodiversity mitigation and enhancement may be left in-situ for species protection. Any required species licences would be obtained for reinstatement works if necessary.
- 1.1.5 It is common practice for infrastructure such as 132 kV Substations and their associated export cables (i.e., the Grid Connection Substations and Grid Connection Cables) to be retained and used for another purpose after the development they were originally installed to support is decommissioned. Therefore, it is possible that the Grid Connection Substations and Grid Connection Cables may remain in place/operational after decommissioning of the Solar Farm. This cannot be confirmed at this time and will depend upon demand closer to the decommissioning date. The DEMP therefore considers the decommissioning of this infrastructure where relevant.
- 1.1.6 The mode of cable decommissioning for the Grid Connection and Interconnecting Cables will be dependent upon government policy and best practice at that time. Currently, the most environmentally acceptable option is leaving the cables in situ, as this avoids disturbance to overlying land and habitats and to neighbouring communities. Alternatively, the cables can be removed by opening the ground at regular intervals and pulling the cable through to the extraction point, avoiding the need to open up the entire length of the cable route.

- 1.1.7 Upon decommissioning, the physical infrastructure within the Solar PV Site (operational solar farm) which lies above plough depth will be removed and the land returned to the landowner. Noting that the Grid Connection Cables are installed below plough depth and so will not interfere with normal agricultural operations should they remain in place after the Scheme is decommissioned.
- 1.1.8 This will include the areas of agricultural land where the agricultural resource has been maintained (and potentially improved) during operation, and the established habitats. Post-decommissioning, the landowner may return the Solar PV Site to its original use. It is anticipated that some areas of habitat and biodiversity mitigation and enhancement may be left in-situ for species protection. Any required species licences would be obtained for reinstatement works if necessary.
- 1.1.9 The aim of this Framework DEMP is to demonstrate how the mitigation measures included within the Environmental Statement (ES) will be implemented. It also sets out the monitoring and auditing activities designed to ensure that such mitigation measures are carried out, and that they are effective. This document does not address the construction or operational activities, which are subject to separate environmental management plans and procedures (Framework Construction Environmental Management Plan (CEMP) [EN010143/APP/7.7] and Framework Operational Environmental Management Plan (OEMP) [EN010143/APP/7.8]).
- 1.1.10 An Environmental Impact Assessment (EIA) has been undertaken for the Scheme and an ES has been prepared in accordance with the Infrastructure Planning (EIA) Regulations 2017 (EIA Regulations) (Ref. 1). In accordance with the requirements of the EIA regulations, the ES contains the assessment of potential impacts on the environment that may be caused during the decommissioning of the Scheme and describes proposed mitigation measures.
- 1.1.11 It is envisaged that a DEMP may be prepared, approved, and implemented for individual elements of the Scheme (e.g. one DEMP for works in the Grid Connection Corridor and associated Site Accesses, and one for works in the Solar PV Site, Interconnecting Cable Corridor, and associated Site Accesses). As a result, there could be multiple DEMP(s) prepared in accordance with the parts of this Framework DEMP.
- 1.1.12 This document provides the likely structure of the detailed DEMP(s) and some outline information relevant to the detailed DEMP(s). The detailed DEMP(s) will be produced in line with this Framework DEMP following the grant of the DCO when the Scheme is due to be decommissioned. It will then be submitted to the appropriate Local Planning Authorities (LPA) for approval, in accordance with Requirement 18 of the **draft DCO** [EN010143/APP/3.1].
- 1.1.13 The nature of the decommissioning activities and potential for likely significant effects would be similar to construction. The DEMP(s) will therefore include similar measures to those included in the Framework CEMP [EN010143/APP/7.7] submitted within the DCO Application, covering issues such as transportation methods, pollution prevention, and noise management.

- 1.1.14 The key elements of this Framework DEMP are:
  - a. An overview of the Site, Scheme, decommissioning activities and programme;
  - b. Prior assessment of potential environmental impacts (through the EIA);
  - c. Proposed mitigation measures to prevent or reduce potential adverse impacts;
  - d. Monitoring and reporting of effectiveness of mitigation measures;
  - e. Corrective action procedure; and
  - f. Links to other complementary plans and procedures.
- 1.1.15 In summary, this Framework DEMP will identify how commitments made in the ES will be translated into actions on site during decommissioning and includes a process from implementing the actions through to the allocation of key roles and responsibilities.
- 1.1.16 The appointed Contractor(s) will be responsible for working in accordance with the environmental controls documented in the detailed DEMP which will be prepared in accordance with this Framework DEMP, as a requirement of the DCO. The overall responsibility for implementation of the detailed DEMP will lie with the Contractor as a contractual responsibility to the Applicant, as the Applicant is ultimately responsible for compliance with the Requirements of the DCO.
- 1.1.17 This Framework DEMP has been designed with the objective of compliance with the relevant environmental legislation, and the mitigation measures set out within the ES.
- 1.1.18 Any additional licences, permits or approvals that are required will be listed in the detailed DEMP, including any environmental information submitted in respect of them.

## 1.2 The Applicant

- 1.2.1 The Applicant (East Yorkshire Solar Farm Limited) is a wholly owned subsidiary of BOOM Developments Limited who specialise in non-subsidised solar and battery storage projects. BOOM Developments Limited was founded in 2020, and the name BOOM is an acronym for Build Own Operate Maintain. This reflects the organisation's intentions to be involved in sustainable energy projects from day one right the way through to operation.
- 1.2.2 Further information on BOOM Developments Limited can be found in Chapter 1: Introduction, ES Volume 1 [EN010143/APP/6.1] and the Funding Statement [EN010143/APP/4.2].
- 1.2.3 The DCO Application is submitted to the Planning Inspectorate, with the decision of whether to grant a DCO to be made by the Secretary of State for Department for Energy Security and Net Zero (hereafter referred to as the 'Secretary of State') pursuant to the Planning Act 2008 (Ref. 2).

## 1.3 The Site

1.3.1 The Order limits are shown on **Figure 1-2**, **ES Volume 3** [**EN/010143/APP/6.3**] and represent the maximum extent of land to be acquired or used for the construction, operation (including maintenance), and decommissioning of the Scheme. This includes land required for temporary and permanent uses. The 'Site' is the collective term for all land within the Order limits.

- 1.3.2 The Site comprises approximately 1,276.5 hectares (ha) of land, centred on National Grid Reference SE 756 330. It is located between the villages of Gribthorpe, Spaldington, Brind and Willitoft. The nearest town is Howden approximately 1.6 kilometres (km) away at the closest point.
- 1.3.3 The Site includes the following elements:
  - a. The Solar PV Site which will include the Solar PV Panels and supporting solar PV infrastructure;
  - The Grid Connection Corridor includes the area outside of the Solar PV Site within which the 132 kV cabling linking the Grid Connection Substations to the National Grid Drax Substation will be laid;
  - c. The Interconnecting Cable Corridor includes the area outside of the Solar PV Site and Grid Connection Corridor which will contain the 33 kV cabling linking the Solar PV Areas to the Grid Connection Substations;
  - d. Ecology Mitigation Area includes the area of land in the north-east of the Site which is to be managed to provide good quality habitat for overwintering and migratory bird species; and
  - e. Site Accesses includes additional land required to facilitate access to the Site, such as new access routes or measures to provide better visibility splays.
- 1.3.4 The Order limits straddle the boundary between East Riding of Yorkshire Council and North Yorkshire Council. The Solar PV Site, Ecology Mitigation Area and Interconnecting Cable Corridor are solely located within the administrative area of East Riding of Yorkshire Council. The Grid Connection Corridor and Site Accesses are located within the administrative areas of East Riding of Yorkshire Council and North Yorkshire Council.
- 1.3.5 Further details of the Site are presented in **Chapter 2: The Scheme, ES Volume 1 [EN010143/APP/6.1].**

#### 1.4 The Scheme

- 1.4.1 The Scheme will comprise the construction, operation (including maintenance) and decommissioning of a solar photovoltaic (PV) electricity generating facility with a total capacity exceeding 50 megawatts (MW) and export connection to the national grid, at National Grid's Drax Substation.
- 1.4.2 Due to its proposed generating capacity being more than 50 MW the Scheme is classified a Nationally Significant Infrastructure Project (NSIP), which requires a Development Consent Order (DCO) from the Secretary of State for Energy Security and Net Zero.
- **1.4.3** Further details of the Scheme are presented in Chapter 2: The Scheme, ES Volume 1 [EN010143/APP/6.1].

# 2. Decommissioning Environmental Management

## 2.1 Decommissioning Activities

- 2.1.1 The design life of the Scheme is 40 years with decommissioning to commence 40 years after final commissioning (currently anticipated to be 2027). Decommissioning is therefore anticipated to commence in 2067.
- 2.1.2 When the operational phase ends, the solar farm will require decommissioning. All PV modules, mounting poles, inverters transformers and switchgear would be removed and recycled or disposed of in accordance with good practice and market conditions at the time. Buried Onsite (low voltage) cables would be removed. Buried Interconnecting Cables (medium voltage) would either be removed or left in-situ providing the depth of installation was below 0.9 m and would not interfere with normal agricultural operations (ploughing). The majority of the Solar PV Site would be returned to the landowner after decommissioning and will be available for its original use. The future of the Grid Connection Substations, associated control buildings, and the Grid Connection Cable would be agreed with the relevant Local Planning Authority prior to commencement of decommissioning.
- 2.1.3 The specific method of decommissioning the Scheme at the end of its operational life is uncertain at present as the engineering approaches to decommissioning will evolve over the operational life of the Scheme.
- 2.1.4 The drainage of the land within the Scheme will be checked after decommissioning. Should any agricultural drains be altered or removed, they will be restored or the land otherwise re-drained such that agricultural activities could continue after decommissioning of the Scheme.
- 2.1.5 It is anticipated that some areas of habitat and biodiversity mitigation and enhancement may be left in-situ for species protection. Any required species licences would be obtained for reinstatement works if necessary.

## 2.2 Decommissioning Programme

- 2.2.1 Decommissioning is expected to take between 24 and 48 months and would most likely be undertaken sequentially.
- 2.2.2 More details on the sequence and programme of decommissioning will be provided with the detailed DEMP, to include timescales and transportation methods which would be agreed in advance with the relevant Local Planning Authority, as secured through a Requirement in the DCO.

## 2.3 Working Hours

- 2.3.1 The core working hours are defined as:
  - a. Monday to Friday 07.00 to 19.00 (daylight hours permitting);
  - b. Saturday 07.00 to 13.00 (daylight hours permitting); and
  - c. No Sunday or Bank Holiday working unless crucial to decommissioning or in an emergency.
- 2.3.2 Emergency working may extend beyond the times quoted above timescales. For these purposes, "emergency" means a situation where, if the relevant

action is not taken, there will be adverse health, safety, security or environmental consequences that in the reasonable opinion of the undertaker would outweigh the adverse effects to the public (whether individuals, classes or generally as the case may be) of taking that action.

- 2.3.3 Working hours may be shortened if working would necessitate artificial lighting and therefore the working day will be shorter in the winter months. It is not possible to avoid working in the winter period due to the length of the decommissioning programme. However, works requiring the disturbance of soils will be prioritised during the drier summer months where practicable.
- 2.3.4 Quiet, non-intrusive works such as the removal of solar PV panels may take place over longer working hours during the summer months.

## 2.4 Control of Noise

2.4.1 Where on-site works are to be conducted outside the core working hours, they will comply with any restrictions agreed with the relevant planning authorities through the voluntary Section 61 (S61) consent process, in particular regarding the control of noise and traffic. Compliance with these noise limits will ensure adverse effects are unlikely. Abnormal or emergency construction traffic movements may occur outside of normal working hours. In the event of these occurrences, specific noise mitigation measures will be put in place to reduce potential noise impacts at nearby noise sensitive receptors.

## 2.5 Control of Light

- 2.5.1 Decommissioning works will generally be limited to daylight hours only, with focussed task specific lighting provided where this is not practicable. Within temporary compounds and laydown areas task specific and fixed 'general' lighting may be required in winter periods (early mornings and up to 19.00 hours for general workforce) to meet safety requirements. Additionally, lighting would be used by the roving security teams during their regular checks and 'emergency' visits (if an alert is triggered).
- 2.5.2 Outside of core working hours Passive Infra-Red (PIR) controlled lights (motion sensors) will be used at temporary compounds and at welfare areas. The closed-circuit television (CCTV) system will also use Infrared (IR) lighting to provide night vision functionality meaning that no visible lighting will be needed for the security system.
- 2.5.3 Lighting will be directional with care to minimise potential for light spillage beyond the site particularly towards houses, live traffic, and habitats, and will be designed with reference to legislation and guidance at the time, in so far as it is reasonably practicable.
- 2.5.4 Where the use of security cameras is required, no visible lighting will be needed as Infrared (IR) lighting will be provided by the CCTV/security system to provide night vision functionality for CCTV.

## 2.6 Traffic Management and Parking Provision

2.6.1 The traffic management mitigation measures set out in the **Framework Construction Traffic Management Plan (CTMP) (Appendix 13-5, ES Volume 2 [EN010143/APP/6.2]**) are also applicable to decommissioning.

- 2.6.2 A Decommissioning Traffic Management Plan (DTMP) will be developed by a Contractor prior to decommissioning in consultation with the appropriate Local Planning Authorities. The DTMP will use, as its starting point, the measures detailed in **Framework CTMP**, updated to reflect the circumstances prevailing during the period in which decommissioning is to be carried out.
- 2.6.3 The measures defined in the DTMP will ensure that the impacts from decommissioning traffic on the local community (including local residents and businesses and users of the surrounding transport network) are minimised, where reasonably practicable.
- 2.6.4 To reduce site traffic on local roads, it is proposed to utilise internal routes through the Solar PV Areas where practicable as the primary route for removal of materials and staff movements. Figures 13-3 and 13-4 (ES Volume 3 [EN010131/APP/6.3]) show the indicative Heavy Goods Vehicles (HGV) routeing for the Scheme and the roads likely to be used to access the Site.
- 2.6.5 If there is mud or debris on the decommissioning site and a risk of this being tracked out by vehicles onto the public highway, wheel cleaning facilities will be used by vehicles prior to exiting the Site. For loads unable to use a fixed wheel wash, it is anticipated that localised wheel washing would be set up to cater for these individually and as required to ensure no detrimental effect to the highway.
- 2.6.6 Vehicle swept path analysis has been conducted on HGV routes where pinch points have been noted using the largest vehicle assumed to utilise the roads (maximum legal articulated vehicle). Abnormal Indivisible Loads (AIL) vehicles have also been analysed along these routes to ensure safe journeys along the road network. The vehicle swept paths also demonstrate that construction vehicles will be able to turn in/out of the proposed site accesses.
- 2.6.7 The temporary compounds will include parking provisions, the location and size of parking provisions on-site, loading and unloading areas for plant and materials, storage areas, wheel washing facilities and construction traffic management measures, as set out in the DTMP. It will also include a description of any laydown areas or contractor welfare areas.
- 2.6.8 Parking provision will also be provided at the operations and maintenance hub at Johnson's Farm, which will remain in use by the Scheme until the end of the decommissioning period and will revert to the landowner at the end of decommissioning.

## 2.7 Recovery, Recycling and Disposing of Waste

2.7.1 The Contactor will separate the main waste streams on-site, prior to transport to an approved, licensed third party waste facility for recovery, recycling or disposal. The wastes generated at decommissioning will primarily be the electrical components of the Solar PV Site, the solar PV frames, and fencing. Prior to the decommissioning works commencing, a Decommissioning Resource Management Plan (DRMP) will be prepared which will provide a waste estimate, and specify key responsibilities, reporting and auditing requirements and waste recovery targets.

2.7.2 Waste Duty of Care will be followed for all waste generated on Site. All waste to be removed from the Site will be undertaken by fully licensed waste carriers and taken to suitably licensed waste facilities and managed in line with the requirements applicable at the time. The Scheme will apply the waste hierarchy, in priority order: prevention, preparation for reuse, recycled, other recovery and disposal.

#### 2.8 Security

- 2.8.1 Site security during decommissioning will be managed by the Contractor. The Solar PV Site Perimeter Fencing will remain in place throughout the duration of the decommissioning works within each Solar PV Area, being the last element of infrastructure to be removed. It is anticipated that the perimeter CCTV system will be one of the last elements to be decommissioned, and that temporary CCTV may also be installed at strategic locations for example to monitor construction compounds and accesses into the Solar PV Site.
- 2.8.2 Storage of materials will be kept secure to prevent theft or vandalism. A safe system for accessing the materials storage areas would be implemented.

#### 2.9 Good Practice

2.9.1 The Considerate Constructors Scheme (CCS) (or equivalent measure in place at the time of decommissioning) will be adopted to assist in reducing pollution and nuisance from the decommissioning of the Scheme, by employing best practice measures which go beyond statutory compliance, where relevant to decommissioning.

#### 2.10 Public Communication and Liaison

- 2.10.1 Prior to the commencement of decommissioning, the Contractor will develop and implement a Stakeholder Communications Plan that includes community engagement and will detail a complaints procedure. In line with the decommissioning Stakeholder Communications Plan, it is likely that a display board will be installed on-site, and a website will be set up. These will include contact details for the Site Manager or alternative public interface with whom nuisance or complaints can be lodged, and the head or regional office contact information. A logbook of complaints will be prepared and managed by the Site Manager or nominated representative.
- 2.10.2 Any environmental complaints received will be investigated, with appropriate action taken and recorded, so that a full audit trail is available should the complainant raise the issue(s) with the local authority.
- 2.10.3 A Community Liaison Group will also be set up prior to decommissioning and a Community Liaison Officer (or alternative) will be appointed to lead discussions with local communities during the decommissioning works.

## 3. Mitigation and Monitoring

#### 3.1 Purpose

3.1.1 This section of the Framework DEMP sets out the mitigation measures to be included as a minimum in the detailed DEMP(s). It also sets out monitoring

requirements and the responsible party identified for each mitigation measure or monitoring requirement. This section will be updated and developed following consent as part of the preparation of the DEMP(s).

3.1.2 It is assumed that all mitigation is in line with the regulations and guidance at the time when decommissioning is undertaken, estimated in 2067. The following tables present likely mitigation based on present baseline information against current legislation. All mitigation will need to be reviewed and updated prior to decommissioning against the baseline environment at that time.

Table 1. Climate Change

| Potential Impact   | Mitigation Measure   | Monitoring       | Responsibility  |
|--|--|------------------|---|
| Greenhouse Gas (GHG) emissions<br>from construction traffic (including<br>ehicles on site and transportation<br>f materials) and end embodied<br>missions of materials and<br>roducts.<br>Increased flood risk on-site due to<br>limate change needing to be | <ul> <li>Appropriate standard and good practice control<br/>measures will be included in the detailed DEMP, which<br/>will include: Health and safety plans developed for<br/>decommissioning activities will be required to account<br/>for potential climate change impacts on workers, such<br/>as flooding and heatwaves. To include measures such<br/>as toolbox talks on training on dangers of extreme<br/>weather conditions;</li> </ul> | None<br>required | The overall responsibility will<br>be with the Contractor.<br>Specific responsibilities will<br>be confirmed in the detailed<br>DEMP. |
| considered in the design,  | Encouraging the use of lower carbon modes of   |                  |   |
| Impact on workers – for example<br>flooding and heatwaves.   | transport by identifying and communicating local bus<br>connections and pedestrian and cycle access routes<br>to/from the Scheme to all decommissioning staff, and<br>providing appropriate facilities for the safe storage of<br>cycles;  |                  |   |
|  | <ul> <li>Liaising with decommissioning personnel for potential<br/>to implement staff minibuses and car sharing options;</li> </ul>  |                  |   |
|  | • Removing and recycling all solar PV panels, mounting poles, inverters, and transformers where practicable, in accordance with good practice and market conditions at the time;   |                  |   |

#### Table 2. Cultural Heritage

| Potential Impact   | Mitigation Measure  | Monitoring  | Responsibility   |
|--|---|---|--|
| Potential for impact upon<br>archaeological deposits/features  | Decommissioning will not have any impact beyond the<br>already-disturbed footprint of the Scheme; therefore, it is<br>not anticipated that decommissioning activities will have a<br>direct physical impact upon archaeological<br>deposits/features  | N/A   | N/A  |
| Temporary impacts on the<br>setting of heritage assets during<br>decommissioning associated<br>with increased visual and noise<br>intrusion. | Decommissioning traffic routes and modes of transport<br>will seek to minimise impacts to numerous receptors,<br>including heritage assets. These will be further defined in<br>the DTMP.   | To be<br>determined as<br>part of the<br>detailed DEMP. | The overall responsibility will<br>be with the Contractor.<br>Specific responsibilities will<br>be confirmed in the detailed |
|  | One of the two principal routes decommissioning traffic<br>will use is the A63, to and from the direction of Selby to<br>the main temporary construction compound (identified in<br><b>Figure 2-4, ES Volume 3 [EN010143/APP/6.3]</b> as<br>Construction Compound Area D) located to the east of<br>Hagthorpe and to the west side of the River Derwent.<br>This route is already a principal road into the area and<br>stopping larger construction traffic here will avoid creating<br>potential impacts to heritage assets further to the east,<br>around, and within, Howden. The town of Howden itself,<br>which contains a number of heritage assets will be off-<br>limits to decommissioning traffic. | DEMP.   | DEMP.  |
|  | The other principal route for decommissioning traffic will<br>be the A163 to and from the direction of Holme-on-<br>Spalding-Moor to a temporary construction compound<br>located to the north of Willitoft in Area 1a of the Solar PV<br>Site.   |   |  |

| Potential Impact | Mitigation Measure  | Monitoring | Responsibility |
|------------------|---|------------|----------------|
|                  | Onward transport from the temporary decommissioning<br>compounds to the Solar PV Site areas will be undertaken<br>by decanted loads conveyed via tractor and trailer. This<br>type of transport will allow numerous intra-site journeys to<br>be undertaken within the boundaries of the Solar PV Site<br>areas, reducing road journeys, and, where unavoidably<br>using roads, will more closely reflect existing agricultural<br>vehicle usages. Intra-site journeys will avoid the town of<br>Howden, and the villages of Wressle, Breighton, Gunby,<br>Bubwith, Spaldington, Willitoft and the hamlet of<br>Gribthorpe, by utilising Wood Lane and Street Lane, or<br>travelling across the Solar PV Site areas directly. |            |                |

| Table 3. Ecology   |   |   |   |
|--|---|---|---|
| Potential Impact (Ecological<br>Receptor/Baseline<br>Information) and Scheme<br>Location   | Mitigation Measure  | Monitoring  | Responsibility  |
| Potential for future baseline to<br>differ to that assumed in the<br>EIA   | Pre-decommissioning surveys will be<br>carried out to verify the adequacy of<br>mitigation and protected species licensing,<br>as required at the time of decommissioning.  | To be determined as part of the detailed DEMP.  | The overall<br>responsibility will be<br>with the contractor.<br>Specific<br>responsibilities will be<br>confirmed in the<br>detailed DEMP. |
| introduce/spread invasive non-<br>native species (INNS) within<br>and beyond the Order limits<br>during decommissioning of the<br>Scheme through<br>vehicles/machinery and people identified within a<br>through site surve<br>See Chapter 8: E<br>[EN01043/APP/6<br>Volume 2 [EN010 | Terrestrial and aquatic INNS have been<br>identified within and in the vicinity of the Site<br>through site survey and desk-based study.<br>See Chapter 8: Ecology, ES Volume 1<br>[EN01043/APP/6.1], Appendix 8-2, ES<br>Volume 2 [EN01043/APP/6.2]) and<br>Appendix 8-3, ES Volume 2<br>[EN01043/APP/6.2].  | Ongoing monitoring of habitats and<br>species will be undertaken<br>throughout decommissioning, over<br>seen by an appointed Ecology Clerk<br>of Works (ECoW) of suitable<br>qualifications and experience, or in<br>charge of a team of appropriately<br>qualified ecologists. The ECoW will<br>have the appropriate authority to<br>review RAMS, oversee works and<br>recommend action as appropriate,<br>including temporarily stopping works<br>where non-compliant working is<br>observed, for example to safeguard<br>protected species and their habitats,<br>or where any other breaches of | The overall<br>responsibility will be<br>with the contractor.<br>Specific<br>responsibilities will be<br>confirmed in the<br>detailed DEMP. |
|  | Pre-decommissioning surveys will be<br>undertaken where required to provide an<br>update on the presence and location of any<br>INNS that could be impacted by the<br>Scheme, the findings of which will inform<br>the implementation of measures to prevent<br>their spread.<br>A Biosecurity Plan will be produced prior to<br>decommissioning which will set out |   |   |

| Potential Impact (Ecological<br>Receptor/Baseline<br>Information) and Scheme<br>Location  | Mitigation Measure  | Monitoring   | Responsibility  |
|---|---|--|---|
|   | procedures to ensure that no INNS are<br>brought onto the Site, exported out of the<br>Site or spread within it (e.g. Wildlife and<br>Countryside Act 1981 (as amended)<br>Schedule 9 species). In the event that any<br>future infestations of INNS are identified<br>prior to and or during the decommissioning<br>process, exclusion zones will be established<br>around them, and a suitably qualified<br>ecologist contacted for advice as required.<br>Site / species specific method statements<br>(or similar will be prepared as required. | environmental legislation are likely to<br>occur.                              |   |
| Potential for obtrusive light spill to impact on ecology.   | visual intrusion and potential adverse<br>effects on sensitive ecological features (e.g.  | Daily environmental checks by<br>nominated personnel will include<br>lighting. | The overall<br>responsibility will be<br>with the Contractor.   |
|   | water bodies, watercourses, woodlands,<br>hedgerows and individual trees) will be<br>implemented as far as reasonably<br>practicable (detailed in section 2.5).   |  | Specific<br>responsibilities will be<br>confirmed in the<br>detailed DEMP.                            |
| Potential for spillages to enter<br>watercourses and impact<br>ecology and dust deposition on<br>sensitive ecological features. | <b>Table 4</b> specifies mitigation requirements in relation to the prevention of spillages and water pollution.  | Daily environmental checks by nominated personnel.                             | The overall<br>responsibility will be<br>with the Contractor.<br>Specific<br>responsibilities will be |

| Potential Impact (Ecological<br>Receptor/Baseline<br>Information) and Scheme<br>Location | Mitigation Measure   | Monitoring | Responsibility                  |
|--|--|------------|---------------------------------|
|  | <b>Table 15</b> specifies mitigation requirementsin relation to air quality (including dustemissions).   |            | confirmed in the detailed DEMP. |
|  | <b>Table 7</b> specifies mitigation requirements inrelation to noise and vibration.  |            |                                 |
|  | Prior to decommissioning, the Contractor<br>will develop an Emergency Response Plan<br>(see also section 2.9 and <b>Table 4</b> ).   |            |                                 |
|  | Unless works require the removal of<br>culverts, no works will be undertaken within<br>at least 10 m of watercourses (30m of the<br>River Ouse, River Derwent and<br>Watercourse DE53), which is considered<br>sufficient to mitigate for potential hazards<br>such as chemical and soils spills to avoid<br>potential direct impacts to watercourses and<br>any protected/notable species that use<br>them. The detailed DEMP will also specify<br>requirements for the safe storage of<br>chemicals/other hazardous materials (e.g.<br>fuel) reaching watercourses during flood<br>events during construction. |            |                                 |

| Potential Impact (Ecological Mit<br>Receptor/Baseline<br>Information) and Scheme<br>Location | tigation Measure   | Monitoring   | Responsibility   |
|--|--|--|--|
| Removal of vegetation present<br>within the Site.  | here required vegetation clearance will be<br>dertaken in advance of decommissioning<br>id at an appropriate time of year to avoid<br>e nesting bird period and incidental<br>uring or killing of reptiles and amphibians.<br>herefore, removal will avoid the nesting<br>rd period (i.e., March to August inclusive)<br>r vegetation clearance and, in areas<br>itable for reptiles, would be undertaken at<br>appropriate time of year, concordant with<br>quirements for other species (such as<br>esting birds and brown hare). Where<br>getation clearance cannot avoid the<br>active season and is proposed within the<br>esting bird period, these will be checked<br>r the presence of any nests by a suitably<br>perienced ornithologist, prior to<br>getation removal, and if active nests are<br>und, then appropriate buffer zones would<br>e put in place and the area monitored until<br>e young birds have fledged. Vegetation<br>th the potential to support reptiles will be<br>t in a phased approach, firstly cutting to<br>form (centimetres), then, following a period<br>no less than 24 hours, to 15cm and then<br>ground level, after another 24 hours. Any<br>ibitat features within such areas which | Pre-start surveys and daily<br>environmental checks by nominated<br>personnel. | ECoW.<br>The overall<br>responsibility will be<br>with the Contractor.<br>Specific<br>responsibilities will be<br>confirmed in the<br>detailed DEMP. |

| Potential Impact (Ecological<br>Receptor/Baseline<br>Information) and Scheme<br>Location | Mitigation Measure   | Monitoring | Responsibility |
|--|--|------------|----------------|
|  | may conceal sheltering reptiles and<br>amphibians (e.g., log piles, rubble mound<br>bunds, any other debris) will not be<br>dismantled during their inactive season (i.e.,<br>November to February inclusive).   |            |                |
|  | Checks for nesting birds listed under<br>Schedule 1 of the WCA 1981 (as amended)<br>especially barn owl ( <i>Tyto alba</i> ) and hobby<br>( <i>Falco subbuteo</i> ) will be undertaken prior to<br>decommissioning (including the appropriate<br>season prior to for monitoring purposes,<br>and immediately prior to for vegetation<br>clearance) and will be carried out where the<br>Scheme intersects or passes close to<br>suitable breeding habitats or known<br>breeding locations for these species. If<br>nesting Schedule 1 birds are found, a<br>suitably qualified ornithologist will be<br>consulted to advise whether a temporary no<br>disturbance buffer around the nest is<br>required to avoid disturbance to Schedule 1<br>breeding species, the size of which will be<br>determined by the species, stage of nesting<br>and decommissioning activity proposed. |            |                |

| Potential Impact (Ecological<br>Receptor/Baseline<br>Information) and Scheme<br>Location  | Mitigation Measure   | Monitoring | Responsibility   |

# Table 6. Arboriculture Impact Assessment

| Potential<br>Impact  | Mitigation Measure  | Monitoring | Responsibility |
|--|---|------------|----------------|
| Tree Loss, or<br>Direct or<br>indirect<br>damage to<br>retained trees. | <ul> <li>An assessment of arboricultural impacts, tree protection measures and the methodology for sensitive works near retained trees will be developed as part of an Arboricultural Method Statement (AMS) and final Tree Protection Plan (TPP) as part of the detailed DEMP.</li> <li>Trees will be protected with a fenced exclusion zone (installed in advance of commencement of works in that location) where feasible. Where access over the Root Protection Area (RPA) of a retained tree is unavoidable this will be achieved using existing hard surfacing or ground protection (which will be sufficient to protect roots and the structure of the soil in which they grow).</li> <li>Where works are unavoidable within the RPA of retained trees, the final working methodology will be detailed in the AMS as part of the detailed DEMP. General guidance measures are set out in Annex D of the Arboricultural Impact Assessment (Appendix 10-5, ES Volume 2 [EN010143/APP/6.2].</li> </ul> | •          |                |
|  |   |            |                |
|  | Where trees require pruning, the extent of pruning will<br>be the minimum feasible to achieve the objective and<br>works will be carried out in accordance with the<br>relevant legislation and guidelines at the time. The final<br>extent of any pruning will be determined by the AMS<br>submitted as part of the detailed DEMP.   |            |                |

| Potential<br>Impact | Mitigation Measure   | Monitoring | Responsibility |
|---------------------|--|------------|----------------|
|                     | The storage of materials and any washing, mixing or<br>refuelling must take place in agreed allocated areas at<br>least 5 m from the edge of the RPA of retained trees.<br>Any slope effect must be taken into account and where<br>there is a potential for run off, heavy duty polythene<br>sheeting and sandbags must be in place as bunding to<br>prevent toxic materials reaching RPAs. |            |                |
|                     | A Biosecurity Plan will be included in the detailed DEMP, secured through the Framework DEMP.  |            |                |

#### Table 7. Noise and Vibration

| Potential Impact   | Mitigation Measure  | Monitoring  | Responsibility  |
|--|---|---|---|
| Volumes of noise that<br>may cause public<br>disturbance during<br>decommissioning<br>operations | Best Practicable Means that would be<br>implemented during decommissioning works are<br>presented below:  | details of monitoring. This will be<br>short term monitoring at the start<br>of new, noisy activities to verify the<br>predictions in the ES and<br>compliance with the predicted<br>significance of effects. | Safety, Health and<br>Environment Manager.<br>The overall responsibility                                  |
|  | <ul> <li>Ensuring that all appropriate processes,<br/>procedures and measures are in place to<br/>minimise noise before works begin and<br/>throughout the decommissioning programme;</li> </ul>  |   | will be with the<br>contractor. Specific<br>responsibilities will be<br>confirmed in the detailed<br>CEMP |
|  | <ul> <li>All contractors to be made familiar with current<br/>legislation and the guidance which should<br/>form a prerequisite of their appointment;</li> </ul>  |   | CEMP  |
|  | <ul> <li>Ensuring that, where reasonably practicable,<br/>noise and vibration are controlled at source<br/>(e.g., the selection of inherently quiet plant<br/>and low vibration equipment), review of the<br/>construction programme and methodology to<br/>consider quieter methods, consideration of the<br/>location of equipment on-site and control of<br/>working hours;</li> </ul> |   |   |
|  | <ul> <li>Use of modern plant, complying with<br/>applicable UK noise emission requirements;</li> </ul>  |   |   |
|  | <ul> <li>Hydraulic techniques for breaking concrete or<br/>rocks to be used in preference to percussive<br/>techniques, where reasonably practicable;</li> </ul>  |   |   |
|  | <ul> <li>Regular and effective maintenance by trained<br/>personnel will be undertaken to keep plant</li> </ul>   |   |   |

| Potential Impact | Mitigation Measure  | Monitoring | Responsibility |
|------------------|---|------------|----------------|
|                  | and equipment working to manufacturer's specifications;   |            |                |
|                  | <ul> <li>All plant and equipment to be properly<br/>maintained, silenced where appropriate,<br/>operated to prevent excessive noise, and<br/>switched off when not in use;</li> </ul>   |            |                |
|                  | <ul> <li>Loading and unloading of vehicles,<br/>dismantling of site equipment or moving<br/>equipment or materials around the Site to be<br/>conducted in such a manner as to minimise<br/>noise generation, as far as reasonably<br/>practicable;</li> </ul> |            |                |
|                  | <ul> <li>All vehicles used on-site shall incorporate<br/>broadband reversing warning devices as<br/>opposed to the typical tonal reversing alarms<br/>to minimise noise disturbance where<br/>reasonably practicable;</li> </ul>                              |            |                |
|                  | <ul> <li>Appropriate routing of construction traffic on<br/>public roads and along access tracks to avoid<br/>sensitive areas where practicable (to be<br/>defined in the DTMP);</li> </ul>   |            |                |
|                  | <ul> <li>Provision of information to the relevant local<br/>authority and local residents to advise of<br/>potential noisy works that are due to take<br/>place;</li> </ul>   |            |                |
|                  | <ul> <li>Monitoring of noise complaints and reporting<br/>to the Applicant for immediate investigation</li> </ul>   |            |                |

| Potential Impact            | Mitigation Measure   | Monitoring   | Responsibility  |
|-----------------------------|--|--|---|
|                             | and action. A display board will be installed<br>on-site (see section 12.14), and a website will<br>be set up. These will include contact details for<br>the Site Manager or alternative public interface<br>with whom nuisance or complaints can be<br>lodged. A logbook of complaints will be<br>prepared and managed by the Site Manager; |  |   |
|                             | <ul> <li>Unnecessary revving of engines will be<br/>avoided, and equipment will be switched off<br/>when not in use;</li> </ul>  |  |   |
|                             | <ul> <li>Drop heights of materials will be minimised;</li> </ul>   |  |   |
|                             | <ul> <li>Plant and vehicles will be sequentially started<br/>up rather than all together;</li> </ul>   |  |   |
|                             | <ul> <li>Plant will always be used in accordance with<br/>manufacturers' instructions. Care will be taken<br/>to site equipment away from noise-sensitive<br/>areas. Where practicable, loading and<br/>unloading will also be carried out away from<br/>such areas;</li> </ul>  |  |   |
|                             | Works undertaken in Grid Connection Corridor<br>and the Interconnecting Cable Corridor would be<br>undertaken at least 15 m from a sensitive<br>receptor where practicable.  |  |   |
| Impacts to nearby residents | Noise generating activities near residential<br>properties, such as use of power tools or pulling<br>of solar PV frame supports, would be limited to<br>the hours between 08:00 and 18:00 from Monday  | Daily environmental checks by nominated personnel. | The overall responsibility will be with the Contractor. |

| Potential Impact  | tential Impact Mitigation Measure Monitoring   |  | Responsibility  |
|---|--|--|---|
|   | to Friday and between 08:00 and 13:00 on Saturday;   | Specific monitoring requirements as agreed with the council. | Specific responsibilities will be confirmed in the  |
|   | Core working hours onsite will be 07:00 to19:00<br>Monday to Friday and 07:00 to 13:00 on<br>Saturday, but will be shortened if working would<br>necessitate artificial lighting and therefore the<br>working day will be shorter in the winter months.<br>There will be no work on a Sunday or Bank<br>Holiday unless crucial to decommissioning (or in<br>an emergency).   |  | detailed DEMP   |
|   | Where high noise generating works are required<br>to be undertaken outside of core daytime working<br>hours, consents will be sought from the relevant<br>local authority where appropriate at the time. This<br>would set out the specific method of working,<br>calculations of noise levels at nearby receptors,<br>the actual working hours required, noise<br>monitoring locations, details of communication<br>measures and the mitigation measures<br>implemented to minimise noise and vibration<br>impacts. |  |   |
| Decommissioning traffic,<br>plant and machinery<br>noise at nearby NSR. | Appropriate routing of traffic on public roads and<br>along access tracks to avoid sensitive areas<br>where practicable (see Chapter 2: The Scheme,<br>ES Volume 1 [EN010143/APP/6.1] and the<br>Framework Construction Traffic Management<br>Plan (CTMP), Appendix 13-5 ES Volume 2   | Further details are to be confirmed<br>in the detailed DEMP. | The overall responsibility<br>will be with the<br>Contractor.<br>Specific responsibilities<br>will be confirmed in the<br>detailed DEMP |

| Potential Impact | Mitigation Measure  | Monitoring | Responsibility |
|------------------|---|------------|----------------|
|                  | [EN010143/APP/6.2] which also contains figures detailing traffic routing);  |            |                |
|                  | Consideration has been given to traffic routing,<br>timing and access points to the Scheme to<br>minimise noise impacts at existing receptors as<br>detailed in <b>Chapter 13: Transport and Access</b> ,<br><b>ES Volume 1 [EN010143/APP/6.1]</b> . Management<br>of Heavy Goods Vehicles (HGV) on the highway<br>network will be managed through the Framework<br>Decommissioning Traffic Management Plan<br>(DTMP), which will be secured through the DCO.<br>Appropriate routing of decommissioning traffic on<br>public roads and along access tracks will be<br>pursuant to the DTMP. |            |                |

#### Table 8. Socio-Economics and Land-Use

| Potential Impact | Mitigation Measure   | Monitoring   | Responsibility  |
|------------------|--|--|---|
| •                | Removal of the Solar PV Site Perimeter fencing is the last<br>stage of demobilisation in each Solar PV Area,<br>decommissioning activities within the Solar PV Site can<br>therefore operate without impacts to PRoW.  | Monitoring any temporary<br>diversions of PRoWs during the<br>decommissioning. To be<br>confirmed in the detailed<br>DEMP. | with the Contractor.  |
|                  | Elsewhere within the Site, access to all existing PRoW will be<br>retained during the decommissioning phase, with no PRoW<br>closures proposed. There will be a limited number of<br>temporary PRoW diversions around the Scheme as set out in<br>the Framework Public Rights of Way Management Plan<br>(Framework PRoWMP) [EN010143/APP/7.13] submitted as<br>part of this DCO Application. |  | Specific<br>responsibilities will be<br>confirmed in the<br>detailed DEMP |
|                  | Additionally, several PRoW will require management to<br>ensure user safety and accessibility. The management<br>measures and the PRoW to which they apply are fully<br>described in the <b>Framework PRoWMP</b><br>[EN010143/APP/7.13]. Management measures include, but<br>are not limited to:   |  |   |
|                  | <ul> <li>Maximising visibility between decommissioning vehicles<br/>and other users (i.e., pedestrians, cyclists, equestrian);</li> </ul>  |  |   |
|                  | • Implementing traffic management (e.g., advanced signage to advise other users of the works); and   |  |   |
|                  | • Use of manned controls where the Scheme crosses PRoW (i.e., marshals or banksmen), with a default priority that decommissioning traffic will give-way to other users.  |  |   |

| Potential Impact   | Mitigation Measure   | Monitoring   | Responsibility                            |
|--|--|--|---|
| Disruption to local<br>residents,<br>businesses and<br>community<br>facilities | Measures to mitigate the effects of visual impacts during decommissioning are outlined in <b>Table 5</b> . | To be included in the detailed DEMP or as outlined in the aforementioned tables. | As outlined in the aforementioned tables. |
|  | Measures to mitigate the effects of decommissioning noise are outlined in <b>Table 7</b> .                 |  |   |
|  | Measures to mitigate the effects of decommissioning traffic are outlined in <b>Table 9</b> .               |  |   |
|  | Measures to mitigate the effects on air quality are outlined in <b>Table 15</b> .                          |  |   |

| roads leading to the Site.<br>Severance and<br>intimidation associated<br>with increased | <ul> <li>Suitable access points will be identified to enable work of vehicles into sites where appropriate;</li> <li>Some accesses along the Grid Connection Corridor may have been modified/reduced in footprint at the end of the construction period. These may require widening. These would be designed based on the relevant standard at the time of decommissioning. Consultation will also to enable with the standard at the time of decommissioning. Consultation will also to enable will be designed based on the relevant standard at the time of decommissioning. Consultation will also</li> </ul> | monitoring as is necessary,<br>with examples provided in<br>the mitigation /<br>enhancements column. | , management, monitoring and<br>implementation of the<br>individual measures within<br>the detailed DTMP. |  |
| decommissioning traffic<br>and abnormal loads.   |   | Further details to be<br>confirmed in the detailed<br>DEMP.  | Other responsibilities are to<br>be confirmed in the detailed<br>DEMP.                                    |  |
|  |   | Other responsibilities are<br>to be confirmed in the<br>detailed DEMP.                               |   |  |
|  | • Minimum car parking levels will be met across the Site to meet the demand during the decommissioning phase;   | •  |   |  |
|  | <ul> <li>Swept path analysis for AILs, HGVs, and<br/>tractor/trailers has been conducted to ensure<br/>there is knowledge of where routing is<br/>appropriate. Where new routes are proposed,<br/>further analysis will be conducted;</li> </ul>  |  |   |  |
|  | <ul> <li>Pre and post decommissioning road condition<br/>surveys will be undertaken at identified locations<br/>in coordination with the Local Highway Authority;</li> </ul>  |  |   |  |

| Potential Impact | Mitigation Measure   | Monitoring | Responsibility |
|------------------|--|------------|----------------|
|                  | <ul> <li>AILs will be routed in accordance with the<br/>findings of the routing review for large vehicles as<br/>set out in the Framework CTMP (Appendix 13-<br/>5, ES Volume 2 [EN010143/APP/6.2]);</li> </ul>  | 3          |                |
|                  | <ul> <li>Implementing local off-site highway<br/>improvements (e.g., verge clearance, hedge<br/>cutting and/or carriageway widening) where<br/>required to support HGV movements;</li> </ul>   |            |                |
|                  | <ul> <li>Utilising internal routes between Solar PV Areas<br/>to avoid using the existing road network where<br/>practicable;</li> </ul>   |            |                |
|                  | <ul> <li>Managing the areas where traffic may have to<br/>use the road network, by providing adequate<br/>visibility splays between decommissioning<br/>vehicles and other road users, implementing<br/>traffic management (e.g., advanced signage to<br/>advise other users of the works, as well as<br/>manned controls at each crossing point<br/>(marshals/ banksmen)), with a default priority that<br/>decommissioning traffic will give-way to other<br/>users. This will also apply where<br/>decommissioning traffic and PRoW may<br/>intersect;</li> </ul> | t          |                |
|                  | <ul> <li>Positioning of suitably qualified banksmen at<br/>access points to allow all vehicle arrivals and<br/>departures to be safely controlled during the<br/>decommissioning period;</li> </ul>  |            |                |

| Potential Impact | Mitigation Measure  | Monitoring | Responsibility |
|------------------|---|------------|----------------|
|                  | <ul> <li>Ensure temporary traffic signals are implemented<br/>where necessary across the road network to<br/>reflect demand;</li> </ul>   |            |                |
|                  | <ul> <li>Restricting HGV movements to certain routes<br/>along 'higher' order roads, such as A and B<br/>classified roads or the Strategic Road Network<br/>(SRN);</li> </ul>   |            |                |
|                  | <ul> <li>Restrictions on HGV and tractor-trailer<br/>movements on roads through Howden and north<br/>from Howden along the B1228 Station Road;</li> </ul>   |            |                |
|                  | <ul> <li>To minimise the number of HGV movements<br/>between 07:00 and 09:00, as well as 16:00 and<br/>20:00, to avoid increasing traffic levels on the<br/>surrounding highway network during the<br/>traditional weekday peak hours;</li> </ul>   |            |                |
|                  | <ul> <li>Implementing a Delivery Management System to<br/>control the bookings of HGVs from the start of the<br/>decommissioning period. This will be used to<br/>regulate the arrival times of HGVs via timed slots,<br/>as well as to monitor compliance of HGV routing.<br/>In addition, adequate space will be made<br/>available within compounds to ensure no queuing<br/>back onto the surrounding road network occurs;</li> </ul> |            |                |
|                  | <ul> <li>Implementing a monitoring system to record the<br/>route of all HGVs travelling to and from the Site,<br/>to record any non-compliance with the agreed<br/>routing strategy/delivery hours and to<br/>communicate any issues to the relevant suppliers</li> </ul>  |            |                |

| Potential Impact | Mitigation Measure   | Monitoring | Responsibility |
|------------------|--|------------|----------------|
|                  | to ensure the correct routes and times are followed;   |            |                |
|                  | <ul> <li>Decommissioning staff will be directed to take the<br/>most direct route to the Site using 'higher' order<br/>roads, such as A and B classified roads or the<br/>SRN;</li> </ul>  |            |                |
|                  | • Encouraging local staff to car share to reduce<br>single occupancy car trips. This will promote the<br>benefits of car sharing, such as reduced fuel<br>costs. A car share system will be implemented to<br>match potential sharers and to help staff identify<br>any colleagues who could potentially be collected<br>along their route to/from the Site;   |            |                |
|                  | <ul> <li>Implementing a shuttlebus service to transfer<br/>non-local staff to/from local worker<br/>accommodation (assumed average occupancy of<br/>16 workers per service), to reduce vehicle trips<br/>on the surrounding highway network. Minibuses<br/>will also be used to transport staff around the<br/>Site, by making use of the internal routes<br/>wherever practicable to travel between the Solar<br/>PV Site, the Grid Connection Corridor and the<br/>Compounds;</li> </ul> |            |                |
|                  | <ul> <li>Providing limited (but sufficient) on-site car and<br/>cycle parking to accommodate the expected<br/>parking demand of staff associated with the<br/>Scheme. Staff movements will be managed<br/>through the implementation of limited car parking,</li> </ul>  |            |                |

| Potential Impact | Mitigation Measure  | Monitoring | Responsibility |
|------------------|---|------------|----------------|
|                  | car sharing, staff routing, specified staff arrival and departure times, parking strategy and the minibus services;   |            |                |
|                  | • A specialised haulage service will be employed to<br>allow AILs to transport components with the<br>necessary escort, permits and traffic<br>management, with the contractor consulting the<br>relevant highways authorities to ensure the<br>correct permits are obtained. The police will also<br>be given advanced notification.   |            |                |
|                  | • PRoWs within the Solar PV Site will have<br>maintained access throughout decommissioning<br>with minor diversions. The Interconnecting<br>Cables or and Grid Connection Cables would<br>only be impacted during short-term trenching and<br>restoration operations, and will be managed with<br>traffic management measures where necessary.<br>Routes may be temporarily slightly altered, e.g.,<br>moving from one side of a road to the other.<br>Under a worst-case scenario, if any PRoWs<br>require diversion, these will be short-term in<br>duration; |            |                |
|                  | • To mitigate impacts for cyclists and pedestrians a communications strategy including regular meetings with contractors to review and address any issues will be implemented; and  |            |                |
|                  | <ul> <li>Additional mitigation measures would only be<br/>required where significant effects are identified</li> </ul>  |            |                |

| Potential Impact | Mitigation Measure  | Monitoring | Responsibility |
|------------------|---|------------|----------------|
|                  | following the application of embedded mitigation<br>measures. However, as all mitigation is<br>embedded within the Scheme design in relation<br>to transport and access, it is not considered that<br>further additional mitigation measures will be<br>introduced. |            |                |

|------------------|--------------------------------|---|
|                  |                                |   |

Further details with respect to mitigation measures relevant to minimising amenity impacts associated with PRoW, traffic, noise, ground contamination, air quality and major accidents or disasters are set out in

**Table 7.** Noise and Vibration, **Table 8.** Socio-Economics and Land-Use, **Table 9.** Transport and Access; **Table 14.** Major Accidents and Disasters; **Table 15.** Air Quality; and **Table 16.** Ground Conditions.

# Table 11. Soils and Agricultural Land

| Potential Impact  | Mitigation/Enhancement Measure   | Monitoring Requirements  | Responsibility   |
|---|--|--|--|
| The Scheme has the potential to impact agricultural land during Decommissioning.                                    | Prior to start of decommissioning, a Soil Management<br>Plan (SMP) following the guidance at the time will be<br>prepared (secured through DCO Requirement). This  | The appointed contractor will<br>undertake such monitoring as<br>is necessary, such as | The overall responsibility will be with the contractor.  |
| The Scheme has the potential to impact soil resources in terms of disturbance and                                   | will be based upon the <b>Framework SMP</b><br>[EN010143/APP/7.10] and the SMP prepared for the<br>Construction phase.   | tor the breechee of  | Specific<br>responsibilities will<br>be confirmed in the |
| damage. Improvements in soil<br>quality may also arise.   | Damage to the structure, function and resilience of soil resources (and consequent impacts to its ability to   | confirmed in the detailed  | detailed DEMP  |
| The Scheme has the potential<br>to result in a loss of soil<br>resources, including related<br>biosecurity effects. | support agriculture) will be mitigated by the use of<br>industry standard good practice measures for the<br>stripping, handling and storage of soil materials, in line<br>with the SMP. The following main rules should be<br>observed during all soil handling tasks: | DEMP.  |  |
|   | <ul> <li>No trafficking/driving of vehicles/plant or materials<br/>storage to occur outside designated areas;</li> </ul>   |  |  |
|   | • No trafficking/driving of vehicles/plant on reinstated soil (topsoil or subsoil);  |  |  |
|   | • Only direct movement of soil from donor to receptor areas (no triple handling and/or ad hoc storage);  |  |  |
|   | <ul> <li>Soils will only be moved under the driest<br/>practicable conditions, and this must take account<br/>of prevailing weather conditions;</li> </ul>   |  |  |
|   | • Soil handling will be undertaken outside of the (wetter) winter period (October to March inclusive) where practicable and will not be undertaken during or immediately after rainfall events. Where the 'wet-working' of soils cannot be avoided specific            |  |  |

| Potential Impact | Mitigation/Enhancement Measure   | Monitoring Requirements | Responsibility |
|------------------|--|-------------------------|----------------|
|                  | methodologies will be followed. These will be set out in the detailed SMP;   |                         |                |
|                  | <ul> <li>No mixing of topsoil with subsoil, or of soil with<br/>other materials;</li> </ul>  |                         |                |
|                  | <ul> <li>Soil only to be stored in designated soil storage<br/>areas, away from watercourse to avoid runoff;</li> </ul>  |                         |                |
|                  | <ul> <li>Soils of different types to be stored separately.<br/>Clear records of the stockpiles (including annotated<br/>plans) will be maintained.</li> </ul>  |                         |                |
|                  | <ul> <li>Plant and machinery only work when ground or soil<br/>surface conditions enable their maximum operating<br/>efficiency;</li> </ul>  |                         |                |
|                  | <ul> <li>All plant and machinery must always be maintained<br/>in a safe and efficient working condition;</li> </ul>   |                         |                |
|                  | <ul> <li>Daily records of operations undertaken, and site<br/>and soil conditions will be maintained; and</li> </ul>   |                         |                |
|                  | <ul> <li>Low ground pressure (LGP models) or tracked<br/>vehicles will be used where practicable.</li> </ul>   |                         |                |
|                  | Soil handling operations will be appropriately<br>supervised to ensure compliance with the SMP to<br>ensure soils are suitable for re-use within the Scheme.<br>The appropriate management of soil resources will<br>maintain soil volumes and quality to prevent<br>loss/lowering of Agricultural Land Classification (ALC)<br>grade at decommissioning and thus potential loss of<br>Best and Most Versatile (BMV) status. |                         |                |
|                  | Topsoil and subsoil from excavation/ working areas<br>will be stripped and stored separately within  |                         |                |

| Potential Impact | Mitigation/Enhancement Measure   | Monitoring Requirements | Responsibility |
|------------------|--|-------------------------|----------------|
|                  | designated storage areas. Soils of different types will<br>be stored separately. Clear records of the stockpiles<br>(including annotated plans) will be maintained. Soils<br>will be replaced in sequence to maintain/restore the<br>soil profile.   |                         |                |
|                  | Access roads and foundations / hardstanding areas<br>within the Solar PV Site will be restored using the soils<br>which were striped and stockpiled during construction.<br>Clear records of the stockpiles (including annotated<br>plans) will be maintained and soils will be reinstated<br>as close as practicable to their point of origin.  |                         |                |
|                  | It is anticipated that some areas of habitat and<br>biodiversity mitigation and enhancement may be left<br>in-situ for species protection. All other land would be<br>fully reinstated as near as practicably possible to its<br>former condition and land use.  |                         |                |
|                  | The loss of soil resource is considered as the main<br>cause of disease and pathogen transfer, due to the<br>transfer of soil (and incorporated seed/spore bank)<br>from infected to uninfected areas. A SMP to be<br>prepared prior to decommissioning will set out<br>appropriate measures to minimise soil loss and hence<br>biosecurity risk. This will also be covered in the<br>Biosecurity Plan delivered prior to decommissioning.<br>This may include measures such as appropriate<br>cleaning and/or disinfection of machinery and<br>equipment in areas considered to be at high risk<br>before moving into uninfected areas. |                         |                |

| Potential Impact | Mitigation/Enhancement Measure  | Monitoring Requirements | Responsibility |
|------------------|---|-------------------------|----------------|
|                  | UK Government's website (relevant at the time of<br>writing) advertising current occurrences and imposed<br>restrictions with regards to animal and plant diseases<br>should be checked throughout decommissioning. The<br>Contractor should also subscribe to the Animal<br>Disease Alert Subscription Service. All restrictions will<br>be adhered to and may include additional biosecurity<br>measures being implemented such as restricted<br>movements within prevention zones and additional<br>measures around the disinfection of plant and<br>equipment (including boots and manual tools).                             |                         |                |
|                  | Soil stockpiles anticipated to be in place for longer<br>than six months should be seeded with appropriate<br>seed mix. Along with protecting the soil against<br>erosion and nutrient loss, this will also help prevent<br>colonisation of the stockpile by nuisance weeds (such<br>as Blackgrass ( <i>Alopecurus myosuroides</i> ) which<br>landowners have reported as being present within<br>areas of the Solar PV Site) that could spread seed<br>onto adjacent land. Stockpiles will be monitored for<br>the presence of undesirable weed species and the<br>stockpile vegetation cover will be managed as<br>appropriate. |                         |                |

# Table 12. Telecommunications, Television Reception and Utilities

| Potential Impact             | Mitigation Measure   | Monitoring              | Responsibility                        |
|------------------------------|--|-------------------------|---------------------------------------|
| utility infrastructure above | The risk of damage to utilities during decommissioning will be minimised through mitigation, which will involve:   | No monitoring required. | To be confirmed in the detailed DEMP. |
| and below ground             | <ul> <li>a) Locating decommissioning activities outside of utilities' protected<br/>zones;</li> </ul>  |                         |                                       |
|                              | <ul> <li>b) Consultation and agreement of decommissioning/demobilisation<br/>methods will be undertaken prior to works commencing (this would<br/>be covered by the protective provisions included in the DCO).</li> </ul> |                         |                                       |

#### Table 13. Material and Waste

| Potential Impact                                   | Mitigation Measure   | Monitoring  | Responsibility  |
|--|--|---|---|
| to impact on sensitive receptors (humans, wildlife | During decommissioning, the Scheme will aim to<br>prioritise waste prevention, followed by preparing<br>for reuse, recycling and recovery and lastly<br>disposal to landfill as per the waste hierarchy.<br>All management of waste will be in accordance<br>with the relevant regulations and waste will be<br>transported by licensed waste hauliers to waste<br>management sites which hold the necessary<br>regulatory authorisation and/or permits for those<br>wastes consigned to them. | As defined in the DWMP.<br>A register of all waste loads leaving<br>the Order limits would be<br>maintained to provide a suitable<br>audit trail for compliance purposes<br>and to facilitate monitoring and<br>reporting of waste types, quantities<br>and management methods. | The overall<br>responsibility will be<br>with the contractor.<br>Specific<br>responsibilities will<br>be confirmed in the<br>detailed DEMP. |
|  | The types, quantities and destination of waste<br>generated during the decommissioning phase<br>would be identified, measured and recorded<br>through the Decommissioning Waste<br>Management Plan (DWMP). The DWMP will set<br>out:   | ning phase<br>recorded<br>re  |   |
|  | <ul> <li>The waste streams that will be generated;</li> <li>How the waste hierarchy will be applied to these wastes;</li> <li>Good practice measures for managing waste; and</li> <li>Roles and responsibilities for waste management.</li> <li>To reduce the potential impacts from materials and waste, and to achieve high levels of</li> </ul>   |   |   |

| Potential Impact | Mitigation Measure  | Monitoring | Responsibility |
|------------------|---|------------|----------------|
|                  | sustainability in the Scheme as a whole, the<br>Contractor will apply the principles of the waste<br>hierarchy and adopt best practice measures<br>(BPM) which go beyond statutory compliance.<br>This may include BPMs set out in construction<br>industry guidance. |            |                |
|                  | The following approaches will be implemented,<br>where practicable, to minimise the quantity of<br>waste arising and requiring disposal during<br>decommissioning:  |            |                |
|                  | <ul> <li>Segregation of waste at source, where<br/>practical, to facilitate a high proportion and<br/>high-quality recycling; and</li> </ul>  |            |                |
|                  | <ul> <li>Off-site reuse, recycling and recovery of<br/>materials and waste where reuse on-site is not<br/>practical, e.g. Through use of an off-site waste<br/>segregation or treatment facility or for direct<br/>reuse or reprocessing off-site.</li> </ul>         |            |                |
|                  | The Principal Contractor will implement the<br>following waste management measures, where<br>practicable, in order to minimise the likelihood of<br>any localised impacts from pollution or nuisance<br>from waste on the surrounding environment:                    |            |                |
|                  | <ul> <li>Damping down of surfaces during spells of dry<br/>weather and brushing/water spraying of<br/>heavily used hard surfaces/access points<br/>across the site as required;</li> </ul>  |            |                |

| Potential Impact | Mitigation Measure   | Monitoring                            | Responsibility |
|------------------|--|---------------------------------------|----------------|

#### Table 14. Major Accidents and Disasters

| Potential Impact | Mitigation Measure |
|------------------|--------------------|
|------------------|--------------------|

Monitoring

#### **Plant or Animal Disease**

A Biosecurity Plan will be provided as an appendix, to the detailed DEMP. This will provide measures to prevent the spread of plant or animal diseases and the transfer of injurious weed species and invasive species. Measures are likely to include appropriate cleaning and/or disinfection of machinery and equipment in areas considered to be at high risk.

The UK Government's website advertising current occurrences and imposed restrictions with regards to animal and plant diseases other relevant will be checked during decommissioning (noting this is the website at the current time and whatever alternative is available at decommissioning will be checked accordingly).

All works will be undertaken in accordance with relevant Health and Safety legislation and guidance. Details of fire, police, emergency services and hospitals will be publicised and included in the site induction.

The relevant risk assessments for safety during decommissioning will be required and produced by the contactor prior to construction, which will be implemented to minimise the risk of accidents and disasters on site.

# Table 15. Air Quality

| Potential Impact  | Mitigation Measure   | Monitoring  | Responsibility   |
|---|--|---|--|
| Increased nitrogen dioxide<br>(NO <sub>2</sub> ) and particulate<br>matter (PM <sub>10</sub> ) from on-site<br>and off-site<br>decommissioning<br>vehicle/plant emissions.<br>Increased particulates and<br>deposited dust from Site<br>activities, materials<br>transportation, storage and<br>handling, including use of<br>haul roads. | <ul> <li>The adoption of good site practice will be implemented through good practice measures to control dust. As decommissioning operations are predicted to be similar to construction, the same good practice measures are predicted to apply.</li> <li><b>Communications</b> <ul> <li>Develop and implement a stakeholder communications plan that includes community engagement before work commences on-site;</li> <li>Display the name and contact details of person(s) accountable for air quality and dust issues on the Site. This may be the environment manager/engineer or the site manager;</li> </ul> </li> <li>Display the head or regional office contact information; and</li> <li>Prior to decommissioning develop and implement a Dust Management Plan (DMP), which may include measures to control other emissions, approved by the Local Authority. The level of detail will depend on the risk and should align with good practice at the time. The desirable measures should be included as appropriate for the Site. The DMP may include, as appropriate/necessary, monitoring of dust deposition, dust flux, real-time PM<sub>10</sub></li> </ul> | <ul> <li>Measures in the detailed DEMP will include the implementation of:</li> <li>Inspection procedures at the Order limits boundary to regularly visually assess any dust and air pollution which may be generated</li> <li>Inspection and maintenance schedules for decommissioning vehicles, plant and machinery; and - Inspection and recording procedures relating to the level of traffic movements, use and condition of haul routes.</li> </ul> | The overall<br>responsibility will<br>be with the<br>contractor.<br>Specific<br>responsibilities will<br>be confirmed in the<br>detailed DEMP. |

| Potential Impact | Mitigation Measure  | Monitoring  | Responsibility |
|------------------|---|-------------|----------------|
|                  | continuous monitoring and/or visual inspections.  |             |                |
|                  | Site Management   |             |                |
|                  | <ul> <li>Site Management</li> <li>Record all dust and air quality complaints, identify cause(s), take appropriate measures reduce emissions in a timely manner, and record the measures taken;</li> <li>Make the complaints log available to the loca authority when asked;</li> <li>Record any exceptional incidents that cause dust and/or air emissions, either on-site or offsite, and the action taken to resolve the situation in the logbook;</li> <li>Hold regular liaison meetings with high-risk construction sites within 500m of the Site (if applicable), to ensure plans are co-ordinated and dust and particulate matter emissions arminimised. It is important to understand the interactions of the off-site transport/deliveries which might be using the same strategic road network routes;</li> <li>Carry out regular site inspections to monitor compliance with the DMP, record inspection results, and make an inspection log available the local authority when asked;</li> <li>Increase the frequency of site inspections by</li> </ul> | e<br>S<br>d |                |
|                  | the person accountable for air quality and du issues on-site when activities with a high  |             |                |

| Potential Impact | Mitigation Measure  | Monitoring | Responsibility |
|------------------|---|------------|----------------|
|                  | <ul> <li>potential to produce dust are being carried out and during prolonged dry or windy conditions; and</li> <li>Agree, where necessary/appropriate, dust deposition, dust flux, or real-time PM<sub>10</sub> continuous monitoring locations with the Local Authority. Where practicable commence baseline monitoring at least three months before work commences on-site or, if it a large site, before work on a phase commences. Further guidance is provided by Institute of Air Quality Management (IAQM) on monitoring during demolition, earthworks and construction.</li> </ul> |            |                |
|                  | Preparing the and Maintaining the Site  |            |                |
|                  | <ul> <li>Plan site layout so that machinery and dust causing activities are located away from receptors, as far as is practicable.</li> <li>Erect solid screens or barriers around dusty activities that are at least as high as any stockpiles on-site where stockpiles (if required) are within 100 m of receptors.</li> </ul>  |            |                |
|                  | <ul> <li>Fully enclose specific operations where there is<br/>a high potential for dust production and the Site<br/>is active for an extensive period where<br/>operations are within 100 m of receptors.</li> </ul>  |            |                |
|                  | <ul> <li>Avoid site runoff of water or mud.</li> <li>Keep site fencing, barriers and scaffolding clean using wet methods.</li> </ul>  |            |                |

| Potential Impact | Mitigation Measure  | Monitoring | Responsibility |
|------------------|---|------------|----------------|
|                  | <ul> <li>Remove materials that have a potential to produce dust from the Site as soon as practicable, unless being re-used on-site. If they are being re-used on-site, cover as described below.</li> <li>Cover, seed or fence stockpiles to prevent wind whipping.</li> <li>Operating Vehicles / Machinery and Sustainable Travel</li> </ul>   |            |                |
|                  | <ul> <li>Ensure all vehicles switch off engines when<br/>stationary – no idling vehicles.</li> </ul>  |            |                |
|                  | <ul> <li>Avoid the use of diesel- or petrol-powered<br/>generators and use mains electricity or battery<br/>powered equipment where practicable.</li> </ul>   |            |                |
|                  | <ul> <li>Impose and signpost a maximum-speed-limit<br/>of 15 mph on surfaced and 10 mph on<br/>unsurfaced haul roads and work areas (if long<br/>haul routes are required these speeds may be<br/>increased with suitable additional control<br/>measures provided, subject to the approval of<br/>the nominated undertaker and with the<br/>agreement of the local authority, where<br/>appropriate).</li> </ul> |            |                |
|                  | <ul> <li>Produce a Delivery Management System (may<br/>also be referred to as a Decommissioning<br/>Logistics Plan) to manage the sustainable<br/>removal of goods and materials.</li> </ul>  | ,          |                |

| Potential Impact | Mitigation Measure   | Monitoring | Responsibility |
|------------------|--|------------|----------------|
|                  | <ul> <li>Implement a Travel Plan that supports and<br/>encourages sustainable travel (public<br/>transport, cycling, walking, and car-sharing).</li> </ul>   |            |                |
|                  | Operations   |            |                |
|                  | <ul> <li>Only use cutting, grinding, or sawing<br/>equipment fitted or in conjunction with suitable<br/>dust suppression techniques such as water<br/>sprays or local extraction, e.g.: suitable local<br/>exhaust ventilation systems.</li> </ul> |            |                |
|                  | <ul> <li>Ensure an adequate water supply on the Site<br/>for effective dust/particulate matter<br/>suppression/mitigation, using non-potable<br/>water where practicable and appropriate.</li> </ul>   |            |                |
|                  | <ul> <li>Ensure equipment is readily available on-site<br/>to clean any dry spillages and clean up<br/>spillages as soon as reasonably practicable<br/>after the event using wet cleaning methods.</li> </ul>                                      |            |                |
|                  | Waste Management   |            |                |
|                  | <ul> <li>Burning of waste or unwanted materials will<br/>not be permitted on-site.</li> </ul>  |            |                |
|                  | Earthworks   |            |                |
|                  | <ul> <li>Re-vegetate earthworks and exposed<br/>areas/soil stockpiles to stabilise surfaces as<br/>soon as practicable.</li> </ul>   |            |                |

| Potential Impact | Mitigation Measure   | Monitoring | Responsibility |
|------------------|--|------------|----------------|
|                  | <ul> <li>Use Hessian, mulches or tackifiers where it is<br/>not practicable to re-vegetate or cover with<br/>topsoil, as soon as practicable.</li> </ul>   |            |                |
|                  | <ul> <li>Only remove the cover in small areas during<br/>work and not all at once.</li> </ul>  |            |                |
|                  | Construction   |            |                |
|                  | <ul> <li>Avoid scabbling (roughening of concrete<br/>surfaces) if practicable.</li> </ul>  |            |                |
|                  | • Ensure sand and other aggregates are stored<br>in bunded areas and are not allowed to dry<br>out, unless this is required for a particular<br>process, in which case ensure that appropriate<br>additional control measures are in place.        |            |                |
|                  | <ul> <li>Ensure bulk cement and other fine powder<br/>materials are delivered in enclosed tankers<br/>and stored in silos with suitable emission<br/>control systems to prevent escape of material<br/>and overfilling during delivery.</li> </ul> |            |                |
|                  | <ul> <li>For smaller supplies of fine powder materials<br/>ensure bags are sealed after use and stored<br/>appropriately to prevent dust.</li> </ul>   |            |                |
|                  | Trackout   |            |                |
|                  | <ul> <li>Use water-assisted dust sweeper(s) on the<br/>access and local roads, to remove, as<br/>necessary, any material tracked out of the</li> </ul>   |            |                |

| Potential Impact | Mitigation Measure  | Monitoring | Responsibility |
|------------------|---|------------|----------------|
|                  | Site. This may require the sweeper being continuously in use.   |            |                |
|                  | <ul> <li>Avoid dry sweeping of large areas.</li> </ul>  |            |                |
|                  | <ul> <li>Ensure vehicles entering and leaving the Site<br/>are covered to prevent escape of materials<br/>during transport.</li> </ul>  |            |                |
|                  | <ul> <li>Inspect on-site haul routes for integrity and<br/>instigate necessary repairs to the surface as<br/>soon as reasonably practicable.</li> </ul>                                       |            |                |
|                  | <ul> <li>Record all inspections of haul routes and any<br/>subsequent action in a site logbook.</li> </ul>  |            |                |
|                  | <ul> <li>When required, dampen down with access<br/>tracks and haul routes with fixed or mobile<br/>sprinkler systems, or mobile water bowsers<br/>and implement regular cleaning.</li> </ul> |            |                |
|                  | <ul> <li>Implement a wheel washing system (with<br/>rumble grids to dislodge accumulated dust an<br/>mud prior to leaving the Site where reasonabl<br/>practicable).</li> </ul>               |            |                |
|                  | <ul> <li>Locate access gates at least 10 m from receptors where practicable.</li> </ul>   |            |                |

#### Table 16. Ground Conditions

| Potential Impact  | Mitigation/Enhancement Measure  | Monitoring<br>Requirements | Responsibility                       |
|---|---|----------------------------|--------------------------------------|
| Potential for risks to human<br>health associated with waste<br>generation, land contamination,<br>airborne contamination and<br>groundwater contamination. | As decommissioning operations are predicted to be similar to<br>construction, the same good practice measures are predicted to<br>apply. The mitigation measures set out below are considered to be<br>standard measures that form part of the general environmental<br>management of the Scheme:                     | None                       | To be included in the detailed DEMP. |
| The discovery of any ground contamination during  | <ul> <li>All workers would be required to wear Personal Protective<br/>Equipment (PPE) such as dust masks as applicable;</li> </ul>   |                            |                                      |
| groundworks, such as the removal of cabling and structures.   | • Containment measures would be implemented, including drip<br>trays, bunding or double-skinned tanks of fuels and oils; all<br>chemicals would be stored in accordance with regulations and<br>guidelines valid at the time, whilst spill kits would be provided in<br>areas of fuel/oil storage;                    |                            |                                      |
|   | • All plant and machinery would be kept away from surface water<br>bodies wherever practicable, checked regularly and, where<br>necessary, the use of drip trays would be employed. Refuelling<br>and delivery areas would be located away from surface water<br>drains;  |                            |                                      |
|   | <ul> <li>An Emergency Response Plan will be produced, which staff<br/>would have read and understood, and provisions made to<br/>contain any leak/spill;</li> </ul>   |                            |                                      |
|   | • Should any potentially contaminated ground, including isolated<br>'hotspots' of contamination and/or potential deposits of<br>asbestos containing materials (ACM), be encountered, the<br>contractor would be required to investigate the areas and<br>assess the need for containment or disposal of the material. |                            |                                      |

| Potential Impact | Mitigation/Enhancement Measure  | Monitoring<br>Requirements | Responsibility |
|------------------|---|----------------------------|----------------|
|                  | The contractor would also be required to assess whether any additional health and safety measures are required;   |                            |                |
|                  | <ul> <li>To further minimise the risks of contaminants being transferred<br/>and contaminating other soils or water, demolition workers<br/>would be briefed as to the possibility of the presence of such<br/>materials;</li> </ul>  |                            |                |
|                  | <ul> <li>In the event that contamination is identified, appropriate<br/>remediation measures would be taken to protect demolition<br/>workers, future site users, water resources, structures, and<br/>services;</li> </ul>   |                            |                |
|                  | <ul> <li>The contractor would be required to place arisings and<br/>temporary stockpiles away from watercourses and drainage<br/>systems, whilst surface water would be directed away from<br/>stockpiles to prevent erosion;</li> </ul>  |                            |                |
|                  | <ul> <li>The risk to surface water and groundwater from run-off from<br/>any contaminated stockpiles during demolition works would be<br/>reduced by implementing suitable measures to minimise<br/>rainwater infiltration and/or capture runoff and leachates,<br/>through use of bunding and/or temporary drainage systems.<br/>These mitigation measures would be designed in line with<br/>current good practice, follow appropriate guidelines and all<br/>relevant licences/permits;</li> </ul> |                            |                |
|                  | <ul> <li>The contractor would ensure that all material is suitable for its<br/>proposed use and would not result in an increase in<br/>contamination-related risks on identified receptors, including<br/>any landscaped areas and underlying groundwater;</li> </ul>   |                            |                |

| Potential Impact | Mitigation/Enhancement Measure   | Monitoring<br>Requirements | Responsibility |
|------------------|--|----------------------------|----------------|
|                  | <ul> <li>Any waters removed from excavations by dewatering would be<br/>discharged appropriately, subject to the relevant permits being<br/>obtained from the Environment Agency.</li> </ul>                               |                            |                |
|                  | <ul> <li>The contractor will implement a dust suppression/management<br/>system in order to control the potential risk from airborne<br/>contamination migrating off-site to adjacent sites.</li> </ul>                    |                            |                |
|                  | <ul> <li>A Water Management Plan which includes details of pollution<br/>prevention will be prepared post-consent. The mitigation for<br/>pollution prevention is covered in <b>Table 4.</b> Water Environment.</li> </ul> |                            |                |

## 4. Complementary Plans and Procedures

4.1.1 A suite of complementary environmental plans and procedures for the decommissioning phase will be developed alongside the detailed DEMP. These plans and procedures will build on the principles and procedures set out in this Framework DEMP and described in the ES. These supporting and supplementary plans and procedures will be clearly outlined in the detailed DEMP(s) and cross referenced.

## 5. Implementation and Operation

- 5.1.1 The detailed DEMP(s) will set out all roles, responsibilities and actions required in respect of implementation of the measures described in this Framework DEMP, including:
  - a. An organogram showing team roles, names and responsibilities;
  - b. Training requirements for relevant personnel on environmental topics;
  - c. Information on-site briefings and toolbox talks that will be used to equip relevant staff with the necessary level of knowledge to follow environmental control procedures;
  - d. Measures to advise employees of changing circumstances as work progresses;
  - e. Communication methods;
  - f. Document control;
  - g. Monitoring, inspections and audits of site operations; and
  - h. Environmental emergency procedures.

## 6. Checking and Corrective Action

#### 6.1 Monitoring and Reporting

- 6.1.1 To meet the requirement of the detailed DEMP(s), environmental monitoring of the Scheme and its impacts will be undertaken throughout the decommissioning phase. Monitoring requirements will be detailed in the detailed DEMP(s).
- 6.1.2 As part of the monitoring process, the applicant will allocate a designated Safety, Health and Environment Manager supported by an Ecological Clerk of Works (ECoW) where required, who will be present on Site throughout the decommissioning phase and when are activities are commencing. The Safety, Health and Environment Manager will observe site activities and report any deviations from the detailed DEMP, along with the action taken and general conditions at the time. The Applicant will be informed of any deviations from the detailed DEMP as soon as practicable following identification of such issues. The Safety, Health and Environment Manager will also act as day-to-day contact with relevant local authorities and other regulatory agencies, such as the Environment Agency.

6.1.3 The Safety, Health and Environment Manager will arrange regular formal inspections to ensure the requirements of the detailed DEMP. After completion of the works, the Safety, Health and Environment Manager will conduct a final review.

### 6.2 Records

- 6.2.1 The Safety, Health and Environment Manager or Project Manager will retain records of environmental monitoring and implementation of the detailed DEMP. This will allow provision of evidence that the detailed DEMP is being implemented effectively. These records will include:
  - a. Environmental Action Schedule;
  - b. Licences and Approvals;
  - c. Results of inspections by Safety, Health and Environment Manager/ ECoW/ Project Manager;
  - d. Other environmental surveys and investigations; and
  - e. Environmental equipment test records.
- 6.2.2 The detailed DEMP will be updated as necessary, with a full review as required (at least quarterly) throughout the decommissioning period.
- 6.2.3 A brief report will be produced and submitted to the relevant local authorities on a quarterly basis and following completion of decommissioning. This will summarise the monitoring process, observed deviations from the detailed DEMP and the corrective actions taken.

#### 6.3 Management Review

6.3.1 The detailed DEMP will be signed off on completion of the decommissioning works by an appropriately qualified person(s).

## **Glossary of Frequently Used Terms**

| Term   | Definition   |  |  |
|--|--|--|--|
| Applicant  | East Yorkshire Solar Farm Limited  |  |  |
| Detailed Construction<br>Environmental<br>Management Plan<br>(CEMP)        | Subsequently produced following the appointment of the contractor, when the detailed design of the Scheme is known, in accordance with a requirement of the DCO prior to commencing construction. It will be a live document and will provide a systematic approach to environmental management so that environmental risks are identified, incorporated in all decision-making and managed appropriately. |  |  |
| Development Consent<br>Order (DCO)   | Development consent is required pursuant to the<br>Planning Act 2008 for Nationally Significant Infrastructure<br>Projects. A development consent order is the order which<br>grants development consent when an application is<br>made to the Secretary of State.   |  |  |
| Environmental impact   | The change in the environment from a development such as the removal of a hedgerow.  |  |  |
| Environmental Impact<br>Assessment (EIA)                                   | A process by which information about environmental<br>effects of a proposed development is collected, assessed<br>and used to inform decision making. For certain projects,<br>EIA is a statutory requirement.   |  |  |
| Framework CEMP   | This document. Provides a framework from which a final CEMP will be developed to avoid, minimise or mitigate any construction effects on the environment.  |  |  |
| Framework<br>Decommissioning<br>Environmental<br>Management Plan<br>(DEMP) | A specific plan developed to ensure that appropriate<br>environmental management practices are followed<br>during the decommissioning phase of a project.  |  |  |
| Framework Operational<br>Environmental<br>Management Plan<br>(OEMP)        | A specific plan developed to ensure that appropriate<br>environmental management practices are followed<br>during the operational phase of a project.  |  |  |
| Grid Connection Corridor   | Corridor which represents the maximum extent of land within which the cable route would be located.  |  |  |
| Grid Connection<br>Substation  | A compound containing electrical equipment to enable connection to the National Grid.  |  |  |
| Interconnecting Cable<br>Corridor  | The land outside of the Solar PV Site and the Grid<br>Connection Corridor in which the 33 kV cables linking the  |  |  |

| Term  | Definition   |
|---|--|
|   | Solar PV Areas to the Grid Connection Substations will be installed.   |
| Interconnecting Cables                                      | 33 kV cables which link the Solar PV Areas to the Grid<br>Connection Substations. (This excludes the 132 kV Grid<br>Connection Cable).   |
| Inverter  | Inverters convert the direct current (DC) electricity<br>collected by the PV modules into alternating current<br>(AC), which allows the electricity generated to be<br>exported to the National Grid. Battery energy storage<br>systems also use inverters to convert between DC and<br>AC. The batteries function in DC and electricity must be<br>converted to AC to pass into or from the grid. |
| Mitigation  | Measures including any process, activity, or design to avoid, prevent, reduce, or, if practicable, offset any identified significant adverse effects on the environment.   |
| National Grid Drax<br>Substation                            | The substation at Drax Power Station west of Drax<br>village, North Yorkshire, owned and operated by National<br>Grid and where the Grid Connection Cable will connect<br>to.  |
| Nationally Significant<br>Infrastructure Projects<br>(NSIP) | NSIPs are large scale developments such as certain new<br>harbours, power generating stations (including wind<br>farms), highways developments and electricity<br>transmission lines, which require a type of consent<br>known as 'development consent' under procedures<br>governed by the Planning Act 2008 (and amended by the<br>Localism Act 2011).   |
| Scheme  | The project (as described in section 1.3 of this document) for which the DCO Applicant is sought.  |
| Site  | The Site is the collective term for the Solar PV Site, the<br>Interconnecting Cables and the Grid Connection<br>Corridor.  |
| Solar photovoltaics (PV)                                    | Solar electricity panels, also known as PV, capture the sun's energy and convert it into electricity for consumer use.   |
| Solar PV Areas  | Areas of land within which the solar PV panels, Field<br>Stations and Grid Connection Substations are to be<br>located. For clarity of reporting, individual Solar PV Areas<br>have been assigned an identification number e.g. 1a, 1b,<br>etc.  |
| Solar PV Site   | The Solar PV Site comprises the 18 Solar PV Areas. This is the anticipated maximum extent of land potentially required for the solar photovoltaic (PV) panels,   |

| Term                            | Definition   |
|---------------------------------|--|
|                                 | associated infrastructure and on-site energy storage facilities; including land for landscaping and habitat enhancement  |
| Solar PV Panels                 | Convert sunlight into electrical current (as direct current, DC). Typically consist of a series of photovoltaic cells beneath a layer of toughened, low reflectivity glass.  |
| String inverters                | A device used with solar arrays to convert the energy<br>that is generated (DC) to usable electricity for a home<br>(AC)   |
| Switchgear                      | Switchgear is an integral part of an electric power<br>system. It includes fuses, switches, relays, isolators,<br>circuit breaker, potential and current transformer,<br>indicating device, lightning arresters, etc. that protects<br>electrical hardware from faulty conditions. |
| Temporary construction compound | Any working area defined for the purpose of storage of plant, materials or equipment or for the use of welfare and site management.  |
| Transformers                    | Transformers control the voltage of the electricity generated across the site before it reaches the electrical infrastructure.   |
