

Please can I bring to your attention another proposed Solar factory which has the name Mylen Leah Solar farm. As a resident in the [REDACTED], and my family are aghast at another 3000 + being forced upon us.

The affect on our quality of life, visual impact and accumulated affect on the landscape for miles and miles is horrific. Nature does not stand a chance of survival no matter what these big companies say.

Boom, still to this date has not answered specific questions. Landscaping, screening, traffic management but just simply quotes statistics that please them.

100% of Gribthorpe residents have objected to Booms plans, but not one question has been discussed properly. For two years residents have lived and dealt with this process and it has taken a heavy toll which I hope you will understand.

The footprint of this application still does not make logical sense when you know and understand this area. The land acreage can be radically reduced to gain the same output.

Will Boom stay around for forty years? I doubt very much they will. One passed Solar farm in Kent already has been sold off to Tesco and Shell.

We have chosen to live where we do for generations and have never been under so much threat from the big companies who just ride roughshod over us for financial gain.

Food security must be taken seriously for animals and humans. We as a country are losing productive land at a alarming rate.

We are in your hands now.
