

I would like to formally and strongly object to the industrial level plans for the EYSF which is in the heart of many villages and towns in our area - all / many of which have already had many adverse impacts from the likes of wind farms (eg my primary objection is cumulative effect) as well as the impact on natural beauty of the area. Please therefore treat this comment and a full and strong objection against that proposals. There is only 1 thing that drives this 50% owned Germany company and that is profit - the only consideration they gave to feedback from the residents when initial plans were shared was to increase the size of the industrial wind farm in their final submission !! It is a total disgrace to suggest consideration of such a plan on such an industrial scale. I am not against solar principally, but get it on new builds, and industrial estate where the electricity is actually needed. The impact of two years of building such a industrial scale wind farm will devastate the area, the roads simply aren't capable of taking the traffic and personal safety will be a major issue. Thank you for your consideration in representing the vast majority of local residents and rejecting the plans.
