

We can only repeat what has been said before by us - this project is simply too big and will swamp this village. The solar farm will cover 26.8% of the entire parish area. We wholeheartedly support the expansion of solar and recognise it as a national imperative, but please it should be spread out, it should be on brown field sites (of which there are many in this vicinity) and it should be on domestic and factory rooftops. We have already taken our initiative on this by installing 8kW of solar on our own roof. This density of solar farm has a serious impact on rural communities. Please take note of our very real concerns.
