## BNG Metric Calculations

# 1. Introduction

## 1.1. Purpose of this Document

- 1.1.1. This document has been prepared on behalf of Springwell Energyfarm Ltd ('the Applicant') to present the results of a Biodiversity Net Gain (BNG) assessment to support the application for a Development Consent Order (DCO) for the construction, operation and decommissioning of the proposed Springwell Solar Farm (hereinafter referred to as the 'Proposed Development').
- 1.1.2. The location of the Proposed Development is shown in **ES Volume 2, Figure 1.1: Location Plan [EN010149/APP/6.2]**. The Order Limits presented in **ES Volume 2, Figure 1.2: Order Limits [EN010149/APP/6.2]** comprise approximately 1,280 ha of land and constitute the maximum extent of land that will be required to facilitate the construction, operation (including maintenance) and decommissioning of the Proposed Development.
- 1.1.3. The objectives of this BNG Assessment are to set out:
- a detailed methodology, including assumptions, for undertaking the BNG assessment;
  - the baseline biodiversity value of habitats within the Order Limits prior to construction;
  - the likely biodiversity value of habitats within the Order Limits post-development based on the current design information; and
  - the relative biodiversity change of habitats within the Order Limits after construction compared with before construction, determining whether the Proposed Development has achieved a 10% net gain in biodiversity, the mandatory minimum requirement from the Environment Act 2021 (noting that this requirement does not apply to Nationally Significant Infrastructure Projects (NSIPs) until 2025).
- 1.1.4. The BNG assessment has assessed the **Outline Landscape and Ecology Management Plan (oLEMP) [EN010149/APP/7.9]**. The calculation will therefore be updated as part of the detailed design stage of the Proposed Development to reflect the final design and be included in the Landscape and Ecology Management Plan (LEMP)(s) submitted for approval under the requirement in Schedule 2 of the draft DCO, to demonstrate a minimum 10% BNG is achieved and the trading rules are met. The results of additional habitat surveys required as part of this update will form part of this re-assessment, where undertaken.
- 1.1.5. This BNG assessment is not intended as a habitat implementation or management plan. These matters are set out in the **oLEMP [EN010149/APP/7.7]**.

1.1.6. This BNG assessment is supported by the following documents:

- The Preliminary Ecological Appraisal (PEA) forming the baseline for the Biodiversity ES Chapter (**ES Volume 3, Appendix 7.1 [EN010149/APP/6.3]**).
- oLEMP [**EN010149/APP/7.9**]
- The UK habitat figure (Figure 1, provided in Appendix A)
- The Green Infrastructure BNG Parameters plan (Figure 2, provided in Appendix A)

## 1.2. Policy Context

- 1.2.1. The primary aims of the BNG process are for developments to secure a measurable improvement in habitat for biodiversity, to minimise biodiversity losses and to help to restore ecological networks whilst streamlining development processes. BNG does not replace other existing legislation and policy for nature conservation.
- 1.2.2. The Planning Act 2008 ('PA 2008') provides the legislative basis and defines the application process under which consent NSIPs is sought. This sets out that projects meeting certain defined criteria are classified as NSIPs. It provides that a DCO is required for development that is or forms part of an NSIP (section 31 PA 2008). 3.2.2 The Project is defined as an NSIP under sections 14(1)(a) and 15(1) and (2) of the PA 2008.
- 1.2.3. The Environment Act 2021 introduced a requirement for new developments other than NSIPs to deliver a measurable 10% net gain in biodiversity, normally measured in 'biodiversity units' under Defra/Natural England methodology. It is intended the BNG will apply to all terrestrial NSIPs accepted for examination from November 2025.

## 2. Methodology

### 2.1. Calculating Biodiversity

- 2.1.1. This assessment was undertaken in line with guidance from the Chartered Institute of Ecology and Environmental Management, the British Standard for Biodiversity Net Gain (BS 8683) (Ref 1).
- 2.1.2. Good practice Principles for Biodiversity (Biodiversity Net Gain: Good practice principles for development (Ref 2) have been taken into account when undertaking this assessment (see Section 2.6).
- 2.1.3. To calculate the baseline values for the Order Limits, and assess any changes arising from the Proposed Development, this assessment uses methods set out the Statutory Biodiversity Metric (hereafter ‘the Metric’) user guide (Ref 3).
- 2.1.4. The Metric measures biodiversity value for habitats in ‘biodiversity units’. There are three types of biodiversity units, which are calculated in three separate ‘modules’ of the Metric. These are:
- habitat units (e.g. areas of habitat such as woodland, grasslands, wetlands);
  - hedgerow units (e.g. linear vegetated habitats such as hedgerows and lines of trees); and
  - watercourse units (e.g. linear aquatic habitats such as culverts, canals, wet ditches, rivers and streams).
- 2.1.5. Consequently, a site can have three biodiversity unit values, which are assessed using the Metric, but which cannot be summed together or traded between.
- 2.1.6. The Metric is designed to quantify losses and gains of biodiversity as a result of proposed development or land management to inform and improve planning, design, land management and decision-making. The Metric uses habitats and as a proxy to describe biodiversity.
- 2.1.7. The Metric can calculate biodiversity value of:
- existing habitats;
  - habitat enhancement; and
  - habitat creation.
- 2.1.8. Biodiversity unit values of baseline and proposed habitats are calculated by multiplying the area or length of a habitat by factors that indicate quality and value (distinctiveness, condition and strategic significance).

- 2.1.9. In addition, for those habitats that are to be created or enhanced, the risk of failure is accounted for by applying multipliers for risk factors (difficulty, time to target condition, and spatial risk).
- 2.1.10. A brief description of the different multipliers contained within the Metric are presented in **Table 1**.

**Table 1** Metric multipliers and their definitions

Metric multiplier	Definition
<b>Habitat distinctiveness</b>	A measure based on the type of habitat and its distinguishing features. This includes: <ul style="list-style-type: none"><li>• consideration of species richness and rarity;</li><li>• the extent to which the habitat is protected by designations; and</li><li>• the degree to which a habitat supports species rarely found in other habitats.</li></ul>
<b>Habitat condition</b>	A measure of the habitat against its ecological optimum state. Condition is a way of measuring variation in the quality of patches of the same habitat type.
<b>Strategic significance</b>	Describes the local significance of the habitat based on its location and the habitat type.
<b>Difficulty</b>	A measure which represents the uncertainty in the effectiveness of management techniques used to enhance or create habitat.
<b>Time to target condition</b>	The average time taken between starting creation or enhancement of habitats and that habitat reaching its target condition or distinctiveness.
<b>Spatial risk</b>	Spatial risk represents the relationship between the location of biodiversity loss (on-site) and where the off-site habitat is being delivered. This is applied to off-site interventions only

## 2.2. Defining the Habitat Baseline

- 2.2.1. Habitat surveys were carried out as part of the Preliminary Ecological Appraisal (PEA). Full details of the PEA methodology can be found in **ES Volume 3, Appendix 7.1: Preliminary Ecological Appraisal [EN010149/APP/6.3]** in April/May 2022 and January and July 2023. This survey classified the habitats

within the Order Limits before construction using the UK Habitat classification system (Ref 4). This survey also assessed the ecological condition of each habitat parcel using the Defra condition assessment criteria (Ref 3).

2.2.2. The results of the PEA were supplemented with the results of the following surveys to robustly assess the value of the baseline habitats:

- Notable arable flora (non-crop plant) surveys in targeted sample cropped areas were carried out in June 2024. Full details of the survey methodology can be found in **ES Volume 3, Appendix 7.8: Notable Arable Flora [EN010149/APP/6.3]**.
- Botanical survey of four LWS grassland road verges, which are proposed to be removed for highways access, were carried out in June 2024. Full details of the survey methodology can be found in **ES Volume 3, Appendix 7.9: Local Wildlife Site Verges Survey [EN010149/APP/6.3]**.
- Hedgerow surveys, undertaken in August 2023, May 2024 and August 2024 of hedgerows likely to be affected by the Proposed Development within the Order Limits (for internal access roads, highways access and potentially for cable installation). Full details of the hedgerow survey methodology can be found in **ES Volume 3, Appendix 7.11: Important Hedgerow Survey [EN010149/APP/6.3]**.

2.2.3. The results of these surveys were used to determine the extent, classification and condition of all the baseline habitats within the Order Limits (c 1,280 hectares (ha)). The results of the condition assessment for each baseline habitat polygon or line is presented in Appendix B.

2.2.4. Strategic Significance is defined for each habitat parcel within the baseline. This accounts for the local significance of the habitat based on its location and habitat type, as defined in local documents such as the Local Nature Recovery Strategy (LNRS). Where an LNRS has not been published, alternative documents should be used.

2.2.5. In this assessment, Strategic Significance is defined for baseline habitats using the Lincolnshire Biodiversity Action Plan (BAP) 2011-2020 (Ref 5). Each habitat parcel is assessed against the following criteria:

- High – Habitat type and location is mapped in local documentation and delivers the priorities set out in the applicable document.
- Medium – Applied where the above criteria is not met but the habitats location is ecologically desirable.
- Low – Applied where the definitions for high or medium strategic significance are not met.

2.2.6. Those habitats identified within the BAP have been given a higher strategic significance than those that have not which increases their value. A full description of how the biodiversity design of the Proposed Development has

been derived and the iterative approach taken is given in the oLEMP [EN010149/APP/7.9].

## 2.3. Defining the Proposed Development habitats

- 2.3.1. The Zonal Masterplan, which is provided in **ES Volume 2, Figure 3.1: Zonal Masterplan [EN010149/APP/6.2]** and Green Infrastructure Plan, which is provided in **ES Volume 2, Figure 3.3: Green Infrastructure Parameters [EN010149/APP/6.2]**, were used to determine the extent of habitats within the Order Limits after construction.
- 2.3.2. The Green Infrastructure BNG Parameters plan (Figure 2 Appendix A) shows the extent of area outside of the Green Infrastructure parameters to be retained, along with proposing the following:
- Solar PV module areas
  - Mitigation areas
  - Green Infrastructure margin areas for biodiversity enhancement
  - Community growing area
  - Proposed strategic tree and hedgerow planting
  - Vegetation removal plan (provided in **ES Volume 2, Figure 3.11: Vegetation Removal Parameters [EN010149/APP/6.2]**)).
- 2.3.3. Details of the habitats proposed within the areas above are set out in the oLEMP [EN010149/APP/7.9]. This document sets out what habitat intervention is required for mitigation, and what the nature of the other biodiversity enhancements within the Green Infrastructure areas will be for the Proposed Development. This information was used to determine the extent, classification and future condition of the Proposed Development habitats following construction.
- 2.3.4. Strategic Significance was assessed for the Proposed Development habitats following the same methodology defined above.
- 2.3.5. Habitat loss, such as hedgerows, due to the Proposed Development have been accounted for by having reference to the Vegetation Removal Plan which is provided in **ES Volume 2, Figure 3.11: Vegetation Removal Parameters [EN010149/APP/6.2]**.

## 2.4. Trading Rules

- 2.4.1. The trading rules set minimum habitat creation and enhancement requirements to compensate for specific habitat losses, up to the point of no net loss. They are based on the habitat type and distinctiveness of the lost habitat. Losses of higher distinctiveness habitats require replacement of the same habitat type to satisfy the trading rules while losses of lower distinctives can be replaced by similar or better habitats.

2.4.2. The trading rules have been followed throughout this assessment.

## 2.5. Irreplaceable and Very High Distinctiveness Habitats

2.5.1. Irreplaceable habitats are habitats which are very difficult (or take a very significant time) to restore, recreate or replace once destroyed. As such, any losses to irreplaceable habitats cannot be calculated by the Metric and they are removed from the baseline.

2.5.2. Very high distinctiveness habitats are highly threatened, internationally scarce habitats which require conservation action. Impacts to these habitats should be avoided in line with planning policy and would require bespoke compensation if impacted.

2.5.3. There are no irreplaceable or very high distinctiveness habitats within the Order Limits therefore avoidance or bespoke compensation does not need to be explored.

## 2.6. Assumptions and Limitations

2.6.1. The following habitats have been considered in the following modules:

- All area habitats mapped with Arc GIS with a polygon have been assessed in the habitat module.
- All hedgerows and lines of trees are mapped with a line and have been assessed in the hedgerow module.
- All ditches (mapped with lines) that are mapped directly adjacent to a hedgerow have been considered in the hedgerow module using the selection of 'hedgerow – associated with bank or ditch'.
- All ditches not adjacent to a hedgerow have been considered in the watercourse module.
- The stream on-site has been mapped with a line and is considered in the watercourse module.

2.6.2. The Lincolnshire BAP 2011-2020 (Ref 5) was used to assign strategic significance for each habitat in the absence of an available Local Nature Recovery Strategy. Justification of strategic significance for each habitat is provided within the user comments box in the Metric.

2.6.3. The assessment assumes that all baseline ponds, scrub and woodland are retained.

2.6.4. The community growing area, as outlined in **ES Volume 2, Figure 3.1: Zonal Masterplan [EN010149/APP/6.2]**, has been assessed in the Metric as an allotment. It is assumed that the margins in this field will be retained.

## 2.7. BNG Good Practice Principles for Development

2.7.1. The Metric sets out a series of good practice principles in accordance with which all BNG assessments should be undertaken. **Table 2** sets out how these principles have been applied to the Proposed Development.

**Table 2** Statutory metric good practice principles for BNG and how they have been applied (Ref 2)

Principle	Justification for how principle has been applied
<b>Principle 1:</b> The metric assessment should be completed by a competent person.	The BNG assessment has been undertaken by Rich Prew (MCIEEM), who has extensive knowledge and expertise in BNG assessments gained through training and experience on a significant number of projects that have required BNG assessments to be undertaken. In addition, this work has been reviewed by Mark Lang (FCIEEM, CEcol, CEnv).
<b>Principle 2:</b> The use of this biodiversity metric does not override existing biodiversity protections, statutory obligations, policy requirements, ecological mitigation hierarchy or any other requirements. This includes consenting or licensing processes, for example woodlands	Existing levels of protection afforded to protected species and habitats are not changed by use of this or any other metric. Statutory obligations will still need to be satisfied. The Environmental Statement details the presence of protected and/or notable species, sites and habitats, and assesses potential impacts and outlines suitable mitigation measures to address these. These required mitigation measures have been factored into this Biodiversity Strategy with a clear distinction made between mitigation and enhancement for biodiversity.
<b>Principle 3:</b> The biodiversity metric should be used in accordance with established good practice guidance and professional codes	The mitigation hierarchy has been applied to the design of the Proposed Development which as outlined in this Biodiversity Net Gain Assessment has been an iterative process. The area of permanent habitat loss has been kept to a minimum without compromising the Proposed Development. The habitats that will be created and enhanced within the Order Limits will be appropriate, and of the correct distinctiveness, to compensate for the habitats that will be impacted.
<b>Principle 4:</b> The biodiversity metric is not a complex or comprehensive ecological model and is not a substitute for expert ecological advice.	It is acknowledged that the Metric has been kept deliberately simple to be of practical use. The calculations have been undertaken by specialists and input is underpinned by robust

Principle	Justification for how principle has been applied
	baseline evidence and ecological knowledge and experience.
<b>Principle 5:</b> Biodiversity units are a proxy for biodiversity and should be treated as relative values.	It is acknowledged that the Metric is a tool to be used as a means of assessing changes in biodiversity value (losses or gains) brought about by the proposed development and is a habitat-based approach to determining a proxy biodiversity value within the Order Limits and the output does not represent absolute values.
<b>Principle 6:</b> This biodiversity metric is designed to inform decisions in conjunction with locally relevant evidence, expert input, or guidance	Impacts to protected and notable species and habitats have been fully assessed as part of the EIA undertaken for Springwell Solar Farm and is reflected in this Biodiversity Assessment with a clear distinction made between mitigation and enhancement for biodiversity.
<b>Principle 7:</b> Habitat interventions need to be realistic and deliverable within a relevant project timeframe.	The habitats chosen for creation and enhancement have been done so based on the existing on-site conditions and local context, not purely to achieve the greatest possible BNG result using the Metric. Any post-development habitats that are created or enhanced will be managed and maintained in accordance with the oLEMP [add ref].
<b>Principle 8:</b> Created and enhanced habitats should be, where practical and reasonable, local to any impact and deliver strategically important outcomes for nature conservation.	As outlined in this Biodiversity Assessment the created and enhanced habitats to achieve the BNG requirements are all being delivered within the Order Limits and are therefore local to the impacts.
<b>Principle 9:</b> The biodiversity metric does not enforce a minimum habitat size ratio for compensation of losses. Proposals should aim to: <ul style="list-style-type: none"><li>• maintain habitat extent - supporting more, bigger, better and more joined up ecological networks</li><li>• ensure that proposed or retained habitat parcels are of sufficient size for ecological function</li></ul>	The BNG Zonal Masterplan (Figure 2, Appendix A) looks to buffer and extend existing calcareous grassland Local Wildlife Site (LWS) verges as well as extending the area managed for biodiversity adjacent to the Wildlife Trust Bloxholm wood nature reserve. This is secured as a <b>Design Commitment</b> [EN010149/APP/7.4].

## 3. Results

### 3.1. Overview

- 3.1.1. The below presents a summary of the BNG assessment for the Proposed Development. The full assessment is detailed in the Metric calculation tool (Excel spreadsheet), which is presented with the application. The condition assessment for each baseline habitat parcel is presented within Appendix B.

### 3.2. Habitat Baseline

- 3.2.1. The baseline habitats are displayed on Figure 1 Appendix A. The baseline values of these habitats are presented below by biodiversity unit type.

#### Habitat Units

- 3.2.2. The area, ecological condition and strategic significance of each baseline habitat recorded within the Order Limits is presented in **Table 3** along with their value in habitat units.

**Table 3 Baseline habitat unit value for the Order Limits before construction**

Habitat	Area (ha)	Condition	Strategic Significance	Baseline habitat units
Cereal crops	433.05	Condition Assessment N/A	Low	866.1
Non-cereal crops	120.01	Condition Assessment N/A	Low	240.02
Temporary grass and clover leys	176.03	Condition Assessment N/A	Low	352.06
Arable field margins pollen and nectar	0.91	Condition Assessment N/A	High	4.186
Winter stubble	12.59	Condition Assessment N/A	Low	25.18
Modified grassland	9.1	Good	Low	54.6
Modified grassland	0.04	Moderate	Low	0.16
Modified grassland	444.24	Poor	Low	888.48
Other grassland	neutral 3.68	Good	High	50.784

Habitat		Area (ha)	Condition	Strategic Significance	Baseline habitat units
Other grassland	neutral	29.54	Moderate	High	271.768
Other grassland	neutral	4.38	Poor	High	20.148
Lowland grassland	calcareous	13.6	Moderate	High	187.68
Lowland grassland	calcareous	0.64	Poor	High	4.416
Mixed scrub		0.2	Moderate	Medium	1.76
Mixed scrub		0.08	Poor	Medium	0.352
Ponds (habitat)	(non-priority	0.01	Good	High	0.138
Ponds (habitat)	(non-priority	0.06	Moderate	High	0.552
Ponds (habitat)	(non-priority	0.04	Poor	High	0.184
Developed land; sealed surface		20.57	N/A - Other	Low	0
Artificial unvegetated, unsealed surface		1.99	N/A - Other	Low	0
Vegetated garden		0.02	Condition Assessment N/A	Low	0.04
Lowland mixed deciduous woodland		1.41	Good	High	29.187
Lowland mixed deciduous woodland		0.06	Moderate	High	0.828
Other woodland; broadleaved		1.11	Moderate	Medium	9.768
Other woodland; broadleaved		0.22	Poor	Medium	0.968

Habitat		Area (ha)	Condition	Strategic Significance	Baseline habitat units
Other mixed	woodland;	5.53	Moderate	Medium	48.664
Other mixed	woodland;	0.39	Poor	Medium	1.716
Other woodland	coniferous	0.03	Poor	Medium	0.066
<b>Total</b>		<b>1,279.53</b>	-	-	<b>3,059.81</b>

3.2.3. The impact of the Proposed Development on the area and habitat unit value of the baseline habitats is displayed in **Table 4**.

**Table 4 Impact of the Proposed Development on the baseline habitat area and habitat unit value**

Impact	Area (ha)	Baseline habitat units
Retained	416.74	1,234.64
Enhanced	389.92	783.46
Lost <sup>1</sup>	472.87	1041.71
<b>Total</b>	<b>1,279.53</b>	<b>3,059.81</b>

## Hedgerow Units

3.2.4. The length, ecological condition and strategic significance of each baseline hedgerow recorded within the Order Limits is presented in **Table 5** along with their value in hedgerow units.

---

<sup>1</sup> In BNG terms habitat lost means the removal of one habitat and replacement with another, including developed land

**Table 5 Baseline hedgerow unit value for the Order Limits before construction**

Habitat	Length (km)	Condition	Strategic Significance	Baseline hedgerow units
Native hedgerow	7.39	Good	High	50.991
Native hedgerow	8.79	Moderate	High	40.434
Native hedgerow	7.92	Poor	High	18.216
Native hedgerow - associated with bank or ditch	3.15	Good	High	43.47
Native hedgerow - associated with bank or ditch	0.55	Moderate	High	5.06
Native hedgerow with trees	16.82	Good	High	232.116
Native hedgerow with trees	8.81	Moderate	High	81.052
Native hedgerow with trees	6.75	Poor	High	31.05
Native hedgerow with trees - associated with bank or ditch	0.37	Good	High	7.659
Native hedgerow with trees - associated with bank or ditch	1.21	Moderate	High	16.698
Species-rich native hedgerow with trees	0.08	Moderate	High	1.104
Ecologically valuable line of trees	0.26	Moderate	High	2.392
Ecologically valuable line of trees	3.77	Poor	High	17.342
Line of trees	0.17	Moderate	High	0.782
Non-native and ornamental hedgerow	0.05	Poor	Low	0.05
<b>Total</b>	<b>66.09</b>	-	-	<b>548.42</b>

- 3.2.5. The impact of the Proposed Development on the total length and hedgerow unit value of the baseline hedgerows is displayed in **Table 6**.

**Table 6 Impact of the Proposed Development on the total baseline length and hedgerow unit value**

Impact	Length (Km)	Baseline hedgerow units
Retained	64.5	537.12
Enhanced	0.23	1.1
Lost	1.36	10.24
<b>Total</b>	<b>66.09</b>	<b>548.42</b>

## Watercourse Units

- 3.2.6. The area and ecological condition of each baseline habitat polygon recorded within the Order Limits is presented in **Table 7** along with their value in habitat units.

**Table 7 Baseline watercourse unit value for the Application Site before construction**

Habitat	Length (km)	Condition	Strategic Significance	Baseline watercourse units
Other rivers and streams	1.51	Moderate	Medium	17.94
Ditches	0.3	Poor	Medium	1.02
<b>Total</b>	<b>1.81</b>	-	-	<b>18.96</b>

- 3.2.7. All watercourse lengths within the Order limits are retained.

## 3.3. Post Development

- 3.3.1. The proposed areas following the construction of the Proposed Development, including those which deliver mitigation and green infrastructure are displayed on **Figure 2, Appendix A**. The proposed classification, condition and strategic significance of the habitats within these areas, along with their biodiversity value, are presented below by biodiversity unit type.

## Habitat Units

- 3.3.2. The area, proposed ecological condition and strategic significance of each habitat planned within the Proposed Development is presented in **Table 8** along with their value in habitat units.

**Table 8 Habitat units delivered by the Proposed Development**

<b>Proposed habitat</b>	<b>Area (ha)</b>	<b>Proposed condition</b>	<b>Strategic Significance</b>	<b>Habitat units delivered</b>
<b>Retained Habitat</b>				
Cereal crops	105.38	Condition Assessment N/A	Low	210.76
Non-cereal crops	60.35	Condition Assessment N/A	Low	120.7
Temporary grass and clover leys	111.22	Condition Assessment N/A	Low	222.44
Arable field margins pollen and nectar	0.42	Condition Assessment N/A	High	1.932
Winter stubble	12.59	Condition Assessment N/A	Low	25.18
Modified grassland	0.04	Good	Low	0.24
Modified grassland	0.04	Moderate	Low	0.16
Modified grassland	51.34	Poor	Low	102.68
Other neutral grassland	2.52	Good	High	34.776
Other neutral grassland	26.58	Moderate	High	244.536
Other neutral grassland	2.9	Poor	High	13.34
Lowland calcareous grassland	11.54	Moderate	High	159.252
Lowland calcareous grassland	0.64	Poor	High	4.416
Mixed scrub	0.2	Moderate	Medium	1.76
Mixed scrub	0.08	Poor	Medium	0.352
Ponds (non-priority habitat)	0.01	Good	High	0.138

<b>Proposed habitat</b>	<b>Area (ha)</b>	<b>Proposed condition</b>	<b>Strategic Significance</b>	<b>Habitat units delivered</b>
Ponds (non-priority habitat)	0.06	Moderate	High	0.552
Ponds (non-priority habitat)	0.04	Poor	High	0.184
Developed land; sealed surface	20.57	N/A - Other	Low	0
Artificial unvegetated, unsealed surface	1.45	N/A - Other	Low	0
Vegetated garden	0.02	Condition Assessment N/A	Low	0.04
Lowland mixed deciduous woodland	1.41	Good	High	29.187

Other woodland; broadleaved	0.22	Poor	Medium	0.968
Other woodland; mixed	5.53	Moderate	Medium	48.664
Other woodland; mixed	0.39	Poor	Medium	1.716
Other coniferous woodland	0.03	Poor	Medium	0.066
<i><b>Sub-total</b></i>	<i><b>416.74</b></i>	<i><b>-</b></i>	<i><b>-</b></i>	<i><b>1,234.64</b></i>

### **Enhanced and created habitats**

Lowland calcareous grassland (mitigation)	161.35	Moderate	High	564.33
---	--------	----------	------	--------

Proposed habitat	Area (ha)	Proposed condition	Strategic Significance	Habitat units delivered
Other neutral grassland (mitigation)	7.64	Good	Medium	66.19
Arable field margins – wild bird mix (mitigation within Green Infrastructure area)	25.46	Condition Assessment N/A	High	113.02
Other neutral grassland (rough grass margins within Green Infrastructure area)	34.23	Poor	High	149.88
Other neutral grassland (flower-rich neutral grassland margins within Green Infrastructure area)	23.04	Moderate	High	165.20
Legume-rich modified grassland (Solar PV Module area)	593.85	Fairly Poor	Low	1671.72
Allotments (community garden area)	1.86	Moderate	Low	7.18
Other woodland; broadleaved (proposed tree planting)	15.35	Poor	Medium	56.52
<i>Sub-total</i>	862.78	-	-	2,794.04
<b>Total</b>	<b>1,279.53</b>	<b>-</b>	<b>-</b>	<b>4028.67</b>

3.3.3. The proposed condition of the habitats enhanced or created for mitigation, biodiversity enhancement or amenity is based upon each habitat considered likely to meet a certain number of condition assessment criteria. These are displayed in **Table 9**.

**Table 9 Condition assessment criteria considered achievable for proposed habitats**

<b>Proposed habitat</b>	<b>Proposed condition</b>	<b>Condition assessment criteria considered achievable<sup>2</sup></b>
<b>Lowland calcareous grassland (mitigation)</b>	Moderate	Consistently high proportion of characteristic indicator species. Varied sward height. cover of bare ground is between 1-5%. cover of bracken and scrub <5%.
<b>Other neutral grassland (mitigation)</b>	Good	>10 species per m <sup>2</sup> would be present. Consistently high proportion of characteristic indicator species. Varied sward height. cover of bare ground is between 1-5%. cover of bracken and scrub <5%. cover of suboptimal species and damaged ground <5%.
<b>Arable field margins – wild bird mix (mitigation within Green Infrastructure area)</b>	Condition Assessment N/A	N/A
<b>Other neutral grassland (rough grass margins within Green Infrastructure area)</b>	Poor	Varied sward height. cover of bracken and scrub <5%.
<b>Other neutral grassland (flower-rich neutral grassland margins within Green Infrastructure area)</b>	Moderate	Consistently high proportion of characteristic indicator species. Varied sward height. cover of bracken and scrub <5%.
<b>Legume-rich modified grassland (Solar PV Module area)</b>	Fairly poor	There are 6-8 vascular plant species per m <sup>2</sup> including 2 forbs. Sward height is varied

<sup>2</sup> Criteria used by the Condition Assessment methodology in guidance produced by DEFRA for the statutory metric.

Proposed habitat	Proposed condition	Condition assessment criteria considered achievable <sup>2</sup>
		Scrub <20% of total grassland area. Cover of Bracken <20%
Allotments (community garden area)	Moderate	Vegetation structure is varied. Contains different plant species beneficial to wildlife.
Other woodland; broadleaved (proposed tree planting)	Poor	No significant browsing damage present. No invasive species present. > 5 native tree or shrub species. Tree mortality < 25%. No nutrient enrichment or damaged ground evident.

## Hedgerow Units

3.3.4. The length, ecological condition and strategic significance of each hedgerow planned within the Proposed Development is presented in **Table 10** along with their value in hedgerow units.

Table 10 Hedgerow units delivered by the Proposed Development

Proposed Habitat	Length (km)	Proposed Condition	Strategic Significance	Hedgerow units delivered
<b>Retained Hedgerows</b>				
Native hedgerow	7.18	Good	High	49.542
Native hedgerow	8.35	Moderate	High	38.41
Native hedgerow	7.71	Poor	High	17.733
Native hedgerow - associated with bank or ditch	3.15	Good	High	43.47
Native hedgerow - associated with bank or ditch	0.55	Moderate	High	5.06
Native hedgerow with trees	16.61	Good	High	229.218

<b>Proposed Habitat</b>	<b>Length (km)</b>	<b>Proposed Condition</b>	<b>Strategic Significance</b>	<b>Hedgerow units delivered</b>
Native hedgerow with trees	8.44	Moderate	High	77.648
Native hedgerow with trees	6.63	Poor	High	30.498
Native hedgerow with trees - associated with bank or ditch	0.36	Good	High	7.452
Native hedgerow with trees - associated with bank or ditch	1.21	Moderate	High	16.698
Species-rich native hedgerow with trees	0.06	Moderate	High	0.828
Ecologically valuable line of trees	0.26	Moderate	High	2.392
Ecologically valuable line of trees	3.77	Poor	High	17.342
Line of trees	0.17	Moderate	High	0.782
Non-native and ornamental hedgerow	0.05	Poor	Low	0.05
<i><b>Sub-total</b></i>	<i><b>64.5</b></i>	<i><b>-</b></i>	<i><b>-</b></i>	<i><b>537.12</b></i>
<b>Enhanced and created habitats</b>				
Native hedgerow with trees	0.23	Good	High	1.8
Species-rich native hedgerow	13.83	Moderate	High	106.47

<b>Proposed Habitat</b>	<b>Length (km)</b>	<b>Proposed Condition</b>	<b>Strategic Significance</b>	<b>Hedgerow units delivered</b>
Species-rich native hedgerow with trees	1.7	Moderate	High	16.43
<i>Sub-total</i>	<b>15.76</b>	-	-	<b>124.7</b>
<b>Total</b>	<b>80.26</b>	-	-	<b>661.83</b>

## Watercourse Units

3.3.5. The length, ecological condition and strategic significance of each watercourse planned within the Proposed Development is presented in **Table 11**, along with their value in watercourse units.

**Table 11 Watercourse units delivered by the Proposed Development**

<b>Retained habitats</b>				
<b>Proposed Habitat</b>	<b>Length (km)</b>	<b>Proposed condition</b>	<b>Strategic Significance</b>	<b>Watercourse units delivered</b>
Other rivers and streams	1.51	Moderate	Medium	17.94
Ditches	0.3	Poor	Medium	1.02
<b>Total</b>	<b>1.81</b>	-	-	<b>18.96</b>

## 3.4. Biodiversity Net Change

3.4.1. The change in biodiversity value delivered by the Proposed Development is summarised in **Table 12**.

**Table 12 Change in units through the Proposed Development**

<b>Unit type</b>	<b>No. baseline units</b>	<b>No. units delivered</b>	<b>Unit change net</b>	<b>Percentage net change</b>
<b>Habitat units</b>	3,059.81	4028.67	968.87	31.66
<b>Hedgerow units</b>	548.42	661.83	113.41	20.68
<b>Watercourse units</b>	18.96	18.96	0	0

- 3.4.2. The table above indicates that the Proposed Development would result in an increase of **968.87 habitat units**, which equates to a **31.66%** biodiversity net gain. The trading rules of the Metric have been satisfied for habitat units, indicating that the distinctiveness of the proposed habitats is sufficient to account for habitats lost.
- 3.4.3. There would also be an increase of **113.41 hedgerow units**, which equates to a **20.68%** biodiversity net gain. The trading rules of the Metric have not been satisfied for hedgerow units due to the marginal loss of 'native hedgerow with trees – associated with bank or ditch' habitat and no proposed hedgerow creation that is associated with a bank or ditch. This could be overcome by creating some of the proposed new hedgerows on a bank or creating a ditch along an existing hedgerow.
- 3.4.4. There would be no change in watercourse units due to no impacts to the watercourses, which equates to no net loss. The trading rules of the Metric have been satisfied for watercourse units because no watercourses will be affected by the Proposed Development.

1.61	0.00	18.92	0.00	0.00	0.00				

Comments as other than the 17.94 units and 0.00 m length lost are as follows:  
Line 02 28 and 42: Medium stream length and width both enhanced. No watercourse encroachment because there are no significant changes in the stream bed or banks and no dredging and no encroachment onto the channel. The stream is located in a field margin and has presence of field margin and moderate riparian vegetation. Line 02 28 and 42: Medium stream length and width both enhanced up to 27% of the area between 4-12m. Moderate riparian enhancement due to presence of a local plan but serves as an ecological corridor through presence of field margin and moderate riparian vegetation. Line 02 28 and 42: Medium stream length and width both enhanced but serve as an ecological corridor through the area. No watercourse encroachment. Major riparian enhancement due to presence of a local plan but serves as an ecological corridor through presence of field margin and moderate riparian vegetation. Line 02 28 and 42: Medium stream length and width both enhanced but serve as an ecological corridor through the area. No watercourse encroachment. Moderate riparian enhancement due to agricultural
