About Us

Delta-Simons is a trusted, multidisciplinary environmental consultancy, focused on delivering the best possible project outcomes for customers. Specialising in Environment, Health & Safety and Sustainability, Delta-Simons provide support and advice within the property development, asset management, corporate and industrial markets. Operating from across the UK we employ over 210 environmental professionals, bringing experience from across the private consultancy and public sector markets.

As part of The Lucion Group, our combined team of 500 in the UK has a range of specialist skill sets in over 50 environmental consultancy specialisms including asbestos, hazardous materials, ecology, air and water services, geo-environmental and sustainability amongst others.

Delta-Simons is a 'Beyond Net-Zero' company. We have set a Science-Based Target to reduce our Scope 1 and Scope 2 carbon emissions in line with the Paris Agreement and are committed to reducing Scope 3 emissions from our supply chain. Every year we offset our residual emissions by 150% through verified carbon removal projects linked to the UN Sustainable Development Goals. Our consultancy services to you are climate positive.

If you would like support in understanding your carbon footprint and playing your part in tackling the global climate crisis, please get in touch with your Delta-Simons contact above who will be happy to help.

1.0 Introduction

1.1 Appointment

Delta-Simons Limited ("Delta-Simons") was instructed by Lanpro Services on behalf of Green Hill Solar Farm Limited (the "Client") to prepare a Preliminary (Geo-Environmental) Risk Assessment for land located between Walgrave and Bozeat, Northamptonshire (the "Site").

This Report was undertaken in accordance with Delta-Simons fee proposals dated 9th June 2023, 12th December 2023 and 8th May 2024. The standard limitations associated with this Assessment are presented in Appendix A.

1.2 Context & Purpose

It is understood that the Site is proposed to be developed as a Solar Farm (Green Hill Solar Farm), however, no specific proposed development plans have been provided. It is anticipated that the majority of the Site will comprise ground mounted solar arrays with associated maintenance access routes and limited infrastructure such as sub-stations and battery storage. At this stage, the exact cable route is unknown, however, an assessment of a cable search area has been undertaken.

The aim of this Report is to support the submission of a planning application for the proposed development.

To that end this study assesses the likely environmental and geotechnical issues associated with soil and groundwater conditions that may affect the proposed development of the Site. This Report is designed in general accordance with guidance on Land Contamination: Risk Management pages of the GOV.UK web pages, the relevant requirements of the National Planning Policy Framework (NPPF) (as revised 2023) (paragraphs 174 & 183-184)¹ and the Planning Practice Guidance (Land Affected by Contamination)².

1.3 Scope of Works

The scope of works includes the following;

Review of the environmental setting of the Site, including the current use / status of the Site and surrounding area, and review of the geology, hydrogeology and hydrology;

Review of the historical activities of the Site and surrounding area;

Review of regulatory information relating to the Site;

Review of the online planning records for the Site;

Review information from the Local Authority in relation to Part 2A of the 1990 Environmental Protection Act;

Review online records of potential unexploded ordnance risks;

Complete a Site reconnaissance by undertaking a visual inspection of readily accessible areas of the Site;

Develop an outline Conceptual Site Model and undertake a Preliminary Risk Assessment with respect to potential contamination focussed on the proposed land use; and

Provide commentary on potential land contamination and geotechnical constraints in the context of the proposed development.

Data sources used in this assessment are listed in Appendix B.

https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/1182_995/NPPF_Sept_23.pdf

² https://www.gov.uk/guidance/land-affected-by-contamination

¹

1.4 Limitations

The standard limitations associated with this Assessment are presented in Appendix A. In addition, there are the following specific limitations that apply to this Assessment:

No specific proposed development has been provided, however, it is anticipated that the majority of the Site will comprise ground mounted solar panels with associated maintenance access routes and limited infrastructure such as sub-stations and battery storage;

A Site walkover has been undertaken as part of this assessment, however, given the scale of the Site it is not feasible to inspect all of the Site, although key areas have been inspected;

The Consultant undertaking the Site inspection maintained a general awareness for evidence of invasive plant species, particularly Japanese Knotweed. While none were observed during the walkover, it should be noted that the Consultant is not a trained ecologist and a separate survey undertaken by an experienced Ecologist would be necessary;

The Report includes an initial assessment of unexploded ordnance (UXO) risks for the Site using online data sources, and

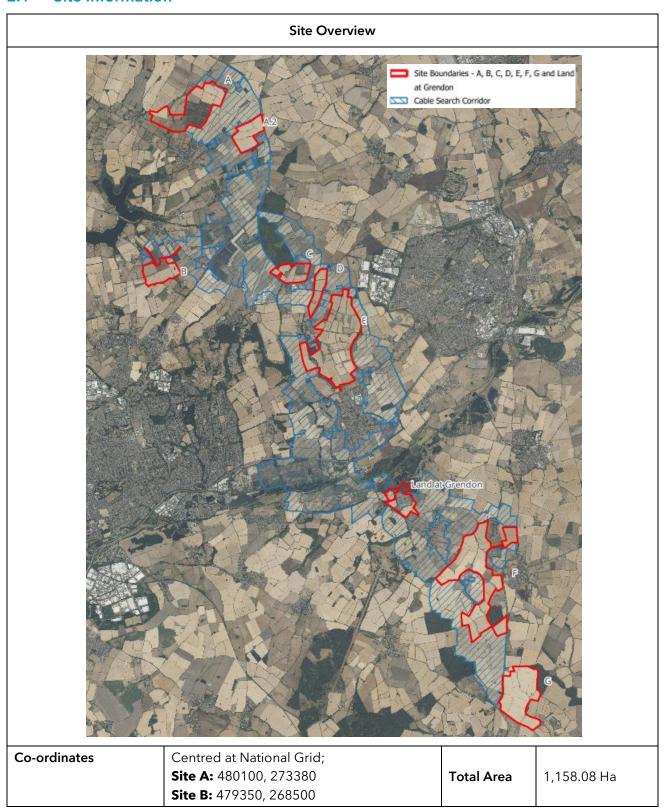

While a detailed radon assessment falls outside of the scope of this Report, a commentary based on UK Health Security Agency guidance (as at ukradon.org.uk) and data presented in the Envirocheck report is provided.

2.0 Site Context & Data Review

The following sections provide a summary of the key site features based on the data sources listed in Appendix B. All distances, measurements and dates are approximate and the accuracy limitations of the data sources should be noted.

2.1 Site Information

Site C: 483325, 268350		
Site D: 484280, 267880		
Site E: 484868, 266280		
Site F: 489700, 259890		
Site G: 490400, 254630		
Land at Grendon: 486550, 261010		
 The Solar Scheme comprises six land parcels	s proposed to	house solar arrays

Site Address and Location

The Solar Scheme comprises six land parcels proposed to house solar arrays. Sites A to F are shown on the plan above. In addition, the scheme will include a cable corridor which connects the land parcels to Green Hill Battery Energy Storage System (BESS), cantered around Grendon, Northamptonshire.

Site A: Land east of Broughton Road, Old - Google Maps Link

Site B: Land south of Holcot, Northamptonshire - Google Maps Link

Site C: Land immediately north of Sywell Road - Google Maps Link

Site D: Land immediately west of Highfield Road - Google Maps Link

Site E: Land at Wilby Road, Mears Ashby - Google Maps Link

Site F: Land to the west of Bozeat, Wellingborough - <u>Google Maps Link</u>

Site G: Land northwest of Northampton Road - Google Maps Link

Land at Grendon: Land north of Grendon - Google Maps Link

Site Description

The Site has been assessed through readily available online aerial and street view imagery. In addition, a Delta-Simons representative undertook a Site walkover on 17th November 2023 and 9th February 2024 (covering sites A to F and Land at Grendon) of readily accessible areas. Pertinent entries noted or observed on-Site are described below and shown on Figure 2, with supporting photographs. No walkover was undertaken for Land at Site G.

Given the size and complexity of the study area, the Site has been separated into a series of field references (A to G) and Land at Grendon, as shown above.

From available online imagery the areas of the Site and the cable search corridor predominantly comprises agricultural land. Discreet areas of development including: a concrete storage area in the north west of Site A, a farm yard in the central south of Site E, an agricultural building in the northern central area of Site E, agricultural buildings in the central area of Site F, small buildings and a track associated with the adjacent solar farm in Site C and roads are present within the boundary (which the cable route crosses or runs beneath in several locations).

The concrete storage area in Site A was noted to be in use largely for the storage of hay. A stockpile of rubble including brick and concrete was noted and a metal silage contained was also present at the time of the walkover.

The cable corridor passes through the eastern extent of Sywell Aerodrome, however, no development is noted in this area.

In addition an electrical transmission line and pylon are present in the northern parcel of Site E, southeastern parcel of Site F and central portion of Site G.

The walkover was undertaken following a period of heavy rainfall, as such, water within the drainage ditches was noted to be high and fast moving and several areas in the vicinity of the River Nene were noted to be flooded.

Description of Adjacent and Surrounding Land Uses

The majority of the Sites are surrounded by undeveloped agricultural land and associated buildings for agricultural use. A review of adjacent and surrounding land uses aside from agriculture is provided below:

Industrial warehouse structures are present approximately 70 m west of Site A;

Approximately 600 m south west of Site C are buildings and structures associated with Sywell Aerodrome;

A solar farm immediately north east of Site C;

A garden centre and caravan storage facility are immediately south of Site C;

Park Farm Industrial Estate is present approximately 600 m east of Site E;

A signage/graphics shop is present approximately 120 m north west of Site E:

The A428 adjacent to the south of Site G; and

Land at Grendon is centred around Grendon Electrical Sub-Station.

2.2 Physical Setting

The physical setting of the subject property can influence the susceptibility to, and relative magnitude of, environmental impacts and liabilities associated with on- and off-Site sources of contamination. The following table provides physical setting information for the subject property and surrounding area.

Published Geology		vey (BGS) online viewer dicates that ground conditions at the Sites		
	Strata	Location		
	Superficial Deposits	Superficial Deposits		
	Oadby Member	Across the majority of the northern and central areas (Site A, B, C, D, E, F, G and Cable Search Corridor).

The Site and cable search corridor are not located within a designated groundwater Source Protection Zone.

The Envirocheck Report lists a groundwater abstraction well in the central southern area of Site E relating to the abstraction of groundwater for general farming and domestic use.

	Within the wider area there are twenty-four abstractions from groundwater located within 1 km of the Site. The majority of the entries related to general farming. There is an abstraction listed for public water supply located approximately 30 m west of Site F, however, the license is noted to have been revoked. There are no potable abstractions within 500 m of the Site.
Groundwater Levels	The available BGS borehole information did not indicate the presence of groundwater in the vicinity of Site F. Given the presence of drains, variable superficial deposits and bedrock strata the depth to groundwater is anticipated to vary across the Site, however, may be perched and/or shallow. Shallow groundwater is anticipated in the central area of the cable corridor associated with the River Nene and lakes.
Hydrology	The nearest surface water features for each of the Sites are summarised below:
	Site A - A drainage ditch is present on Site orientated north east to south west;
	Site B - A drainage ditch is present approximately 100 m east and Pitsford Reservoir approximately 1 km north west of the Site;
	Site C - A small pond immediately north-east of the Site;
	Site D - A drainage ditch is present in the centre of the Site orientated north to south;
	Site E - Two drainage ditches are present on Site in the west and along the eastern perimeter. Sywell Reservoir is present approximately 450 m west of the Site.
	Site F - Two drainage ditches are present on Site in the west and central areas. In addition a number of small ponds are present in the north.
	Site G - Multiple drainage ditches present in the centre of the Site draining into a singular tributary of the River Great Ouse (1.60 km south).
	Grendon Land - The northern land parcel is bounded by a stream along the north western boundary which connects to a series of lakes located to the north. The eastern land parcel is also bound by a stream in the east which connects to a series of lakes in the north (Grendon Lakes) and south (Grendon Quarter Pond). In addition, the River Nene is located approximately 620 m north of the Site.
	The cable route will cross the River Nene to the north of Grendon.
	The Site and surrounding area are characterised by a series of drainage ditches given the agricultural use of the wider area. In addition, there are a series of lakes in the southern central area adjacent to Grendon and the River Nene associated with restored quarries.
	The Envirocheck Report lists an abstraction for spray irrigation in the central area of Site C, however, also notes the abstraction location to be Sywell Reservoir which is located approximately 775 m north. The licensed is noted to be revoked, as such is not considered a receptor.
	There are a further eleven surface water abstractions listed within 500 m of the Site and cable corridor, all of which relate to agricultural use of minerals - washing associated with Earls Barton Quarry.

Site Topography

The regional topography of the area gradually fluctuates whilst generally sloping downwards in a south-easterly direction towards to the River Nene. The highest point of elevation is in the northern areas (Site A and Site B [\sim 125-130m AOD]). The lowest point of elevation is within Site F (\sim 60 m AOD).

Site A: Slopes from ~ 130m in the north east to ~ 105 m in the south east;

Site B: Generally flat at ~125 m;

Site C: Gently slopes from ~ 125 m in the west to ~ 115 m in the east;

Site D: Gently slopes from \sim 120 m in the north to 110 m in the south and slopes down to the west to a minimum of \sim 100 m;

Site E: Gently slopes to the south and slopes to the east and west in the southern area towards the adjacent water features. The Site varies from ~ 115 m in the north to ~ 80 m in the south east and west;

Site F: Slopes from \sim 95 m in the east to \sim 70 m in the west and \sim 60 m in the north west.

Site G: Slopes from ~ 71 m in the south east to ~ 100 m in the northwest.

Grendon Land: Slopes towards the north east, consistent with the wider regional valley topography. The largest level change is noted on the eastern land parcel ranging from 53 m AOD in the south to 48 m AOD in the north.

Mining & Quarrying

Reference to the Coal Authority on-line viewer (<u>bgs.ac.uk/coalauthority</u>) indicates that the Site is not with a Coal Mining Reporting Area. Consequently, a Coal Mining Risk Assessment (CMRA) is unlikely to be required under the planning regime.

The Envirocheck report lists five BGS Recorded Mineral Sites on-Site;

Walgrave Lodge Sand Pit is listed in the north western area of Site A for the extraction of sand. The entry is noted to be ceased. The pit is present in the earliest map edition dated 1884, however, is no longer mapped by 1974.

Walgrave Pit is listed in the central southern area of Site A and is listed to have been in use for the extraction of clay, shale, sand and gravel. The entry is now noted to be ceased. No evidence of quarrying is noted on historical mapping;

An old gravel pit is listed along the south western boundary of Site A. The entry is listed for the extraction of sand and gravel and is noted to be ceased. No evidence of quarrying is noted on historical mapping;

Mears Ashby Iron Ore Pit located along the western boundary of Site C. The entry is for the extraction of iron ore and is noted to be ceased. The pit is shown in historical mapping dated 1901 only, with evidence of the quarrying shown until 1958. From aerial imagery the area is noted to comprise heavily vegetated land with trees; and

Ward's Barn Sand Pit along the western boundary of Site E. The entry is for the extraction of sand via opencast methods and is noted to be ceased. The pit is shown in historical mapping dated 1901 only, with evidence of the quarrying shown until 1988. From aerial imagery the area is noted to comprise a slight topographic bowl.

Within 250 m of the Scheme there are twenty BGS Recorded Mineral Sites which relate to the abstraction of iron ore, sand and gravel, limestone and clay and shale. All entries are noted to be ceased with the exception of one active entry for Earls Barton Quarry located in the central area of the Site near the cable search corridor.

Ground Stability Hazards	The Envirocheck Report indicates the following hazards on the Site; Dissolution - Generally no hazard to low; Landslide - Generally very low to low hazard; Shrinking and swelling clay - No hazard to moderate hazard associated with mapped cohesive materials; Collapsible ground - No hazard to very low;
Radon Gas	Running sands - No hazard to low; Compressible Hazards - Generally no hazard or low hazard across the Site, however, moderate risk associated with discrete areas of superficial Alluvium. The Envirocheck data indicates that the Site lies within an area of variable radon probability, ranging from <1% to 10-30% of homes being above the action level for radon. The requirement for Radon protection will depend on the inclusion and use of any enclosed internal spaces as part of the final
	development.

2.3 Sensitive Land Use

Ecological Receptors	From information provided within the Envirocheck Report, the following statutory ecological receptors are located within 500 m of the Site:		
	Ancient woodlands;		
	o Sywell Wood is noted to be on-Site in the central northern area associated with the cable route, however, the woods are located off-Site and do not form part of the cable corridor;		
	 Hardwick Wood located between 70m and 170 m north east of the central cable route; 		
	 Hom Wood is noted to be on-Site in the southern area of Site F, however, is in fact located off-Site, surrounded by the Site to the south, west and north west; 		
	o Cold Oak Copse located between 310 and 340 m west of Site F;		
	o Three shire Wood is noted to be on-Site however, the woods is located off-Site which borders the northeast of Site G.		
	o Nun Wood located in the east area of Site G.		
	A Site of Special Scientific Interest, Ramsar Site and Special Protection Zone (Upper Nene Valley Gravel Pits) located approximately 360 m east of Site F.		
Heritage Interest	Historic England Records (historicengland.org.uk) indicate that the cable corridor is adjacent to a Grade II listed building (Station Lodge) in the south of the Site, however, it is anticipated that the cable will follow the route of the road. A Grade II listed building (Castle Farmhouse) to the southeast of Site G. No further areas of designated heritage interest are located on or immediately adjacent to the Sites.		

2.4 Historical Use of the Site & Surrounding Area

2.4.1 Approach

The historical development of the Site and surrounding area has been assessed through a review of historical maps, aerial photographs and Google Earth historical satellite imagery. A summary of the key historical Site uses and developments in the surrounding area is presented below. Copies of selected historical maps are included as Appendix D.

2.4.2 Historical Use Summary

Based on a review of the compilation of historical sources dating back to 1888, it appears that the Site has been largely in agricultural use to present day. Discrete areas of development are noted including roadways, a railway, farm tracks and agricultural buildings. A sewage works is noted on-Site in the western area of Site E adjacent to the on-Site stream. The works are mapped from 1927 until 1958 when the area is mapped as a works. By 1999 the works are no longer mapped and the area is noted to comprise an area of woodland from imagery dated 2004 onwards.

There are three areas of agricultural buildings noted in the historical mapping;

Buildings in the northern central area of Site C from the 1900 map edition until 1971;

Barns/storage buildings in the central area of Site E from the earliest map edition dated 1884 until present;

Three barns/storage buildings in the west of Site F from the earliest map edition. The northern barn is no longer visible in 2003 aerial imagery and the central and southern buildings remain until present.

A named farm, Tinick Farm is present in the central area of Site G from the earliest map edition dated 1885 to 1981.

In addition, there are three quarries mapped across the Site;

Walgrave Lodge Sand Pit is present in the north western area of Site A mapped from the earliest map edition dated 1884, until no longer mapped by 1974;

Mears Ashby Iron Ore Pit located along the western boundary of Site C. The pit is shown in historical mapping dated 1901 only, with evidence of the quarrying shown until 1958. From present day aerial imagery the area is noted to be heavily vegetated; and

Ward's Barn Sand Pit along the western boundary of Site E. The pit is shown in historical mapping dated 1901 only, with evidence of the quarrying shown until 1988.

Within the wider area, Sywell Airfield is located in the central area. From readily available online information (source: sywellaerodrome.co.uk) indicates that the airfield was constructed and opened in 1928 and was used as a satellite airfield during the second world war. Sywell Airfield still remains (currently known as Sywell Aerodrome) with an associated aviation museum and hotel present approximately 650 m south-west of the Site. Immediately surrounding the aviation museum is a wider industrial estate with a collection of warehouses predominantly for distribution and logistics. In addition, a small brick works and pit is mapped adjacent to the central eastern boundary of Site F. The works are mapped in the earliest map edition dated 1884 and are later mapped as disused by 1901. The area returned to agricultural use and a pond by 1952.

Grendon Sub Station is noted from 1970 onwards.

No significant potentially contaminated historical land uses have been identified on or off-Site.

2.4.3 Unexploded Ordnance (UXO)

The Zetica Regional Unexploded Bomb Risk Map for the area of the Site (zeticauxo.com) indicates that there is a low risk of UXO in the areas Sites A to F and Land at Grendon at the Site.

A Detailed UXO Risk Assessment was undertaken by 1st Line Defence (ref:DA20134-00), dated 29th June 2024 for Land at Site G after infield Geophysics results indicated evidence of suspected bomb craters and plane wreckage.

Site G and the wider area was used during WWII as a practice bombing range (PBR) known as Lavenham PBR and covered an area of approximately 84,620 m2, operational from at least 1944 under the operational authority of the USAAF 95th Bombing Group.

It is reported in 21st January 1957 a de Havilland Vampire crashed in the fields in proximity to Lower Farm, located in the far east of the Site with wreckage being scattered strewn across the south- east of the Site. However, it was not considered to pose a risk from unexploded ordnance as the aircraft was on a navigation exercise.

In summary, live ordnance (including American live ordinance) was dropped on the Site and therefore is classified as a **Medium Risk** from allied ordnance. The report from German UXO is **Low to Medium Risk**.

Mitigation measures outlined within the Report include implementing a UXO Risk Management Plan and Site Specific UXO Awareness Briefings to all personnel undertaking intrusive works and specifically for open excavations UXO Specialist On-Site Support. The Detailed UXO Report is included in Appendix F.

2.5 Environmental Database Review

The Landmark Envirocheck® Report provides a database of environmental information held by various statutory bodies including the EA, Local Authority (LA), Health & Safety Executive (HSE) and Public Health England amongst others. A copy of the Envirocheck Report is provided in Appendix E and the most relevant information is summarised below.

Features On-Site

The Landmark Envirocheck® Report lists the following pertinent entries for the Site;

There is a Historical Landfill mapped in the central area of the Site adjacent to the cable corridor in the vicinity of Sywell Range. The landfill is noted to have accepted inert waste and from aerial imagery, the land has been 'built-up' to form bunds. As such, it is considered that the cable will not pass through the known landfill;

A Historical Landfill Site is recorded on-Site on Land near Grendon relating to Earls Barton Quarry, held by Mixconcrete Aggregates Limited. The first input date is recorded as 1st October 1979 and the last as 30th September 1986. Deposited waste is recorded as inert.

An extract of the provided landfill boundaries presented, As can be seen the boundary of the landfill follows the boundary stream, however, evidence of quarrying and infill of the void is noted onin the historical mapping, as such, it is considered the entries likely relate to off-Site activities beyond the adjacent stream.

A BGS Recorded Mineral Site relating to Earls Barton Quarry relating to the extraction of sand and gravel. The status is noted as dormant; and

A Pollution Incident to Controlled Water located in the north of the Site which occurred in January 1994. The incident involved a leaking underground pipe and the discharge of oils into the Billing Brook. The incident was categorised as minor. Given the time elapsed since the incident and the severity, the risk to the Site is considered very low.

Potentially Contaminative Features Off-Site

The Landmark Envirocheck® Report lists the following pertinent entries within 250 m of the Site;

There are two further Historical Landfills in the central area associated with Sywell Range. As above, the landfills are noted to have accepted inert waste and from bunds around the shooting range. Given the nature of the accepted materials and given the landfills are above the current ground level, the risk is considered very low;

A Substantiated Pollution Incident Register entry listed approximately 140 m west of the cable route from Site A southward and approximately 915 m north east of Walgrave. The entry relates to a Category 2 - Significant Impact to water dated 2010;

Two Pollution Incidents to Controlled Waters, the closest of which is located approximately 40 m north east of land at Grendon. The incident was recorded as a Category 3 - Minor incident relating to the discharge of an unknown pollutant to Whiston Brook on 21st July 1992. Given the time elapsed since the incident and its severity, the risk to the Site is considered very low; and

Four Contemporary Trade Directory Entries including crushing plant (minerals), car customisation, a caravan dealers and sand and gravel extraction.

As detailed above, it is considered that gravel extraction followed by subsequent landfilling (Earls Barton Quarry, Historical Landfill and Registered Landfill) is actually located off-Site to the north, beyond the adjacent stream. No further BGS, LA or Historical Landfills are mapped within 1 km of the Site.

2.6 Planning Review/Regulatory Enquiries

On-line Planning Review	Wellingborough Council Planning <u>Link</u> West Northamptonshire Council <u>Link</u> North Northamptonshire Council <u>Link</u>	Date Accessed	16 th May 2024
On-Site Applications	There are a number of minor planning app farm access', change of use of land and pertinent applications have been identified	removal of hedge	
	Site C - WP/14/00368/FUL: Installation infrastructure. This application was application relates to the solar farm addition to the currently vacant land in the cu	s permitted in (present immediate	October 2014. This ely north of Site C in
	Site F - WP/1998/0347, WP/1996/0340 and WP/17/00250/CRA relating to sand and gravel extraction in the northern area of Site F. The original application was approved in 1999 and the variation of condition (restoration and aftercare) is currently pending County Council decision.		
	Central area - WP/2010/0020: Creations of a mobile crusher and screen to aggregates to use in the construction go-kart track. It is considered that the Historical Landfills.	tion of inert materi o separate soils and of the mounding a	al and the temporary d recycled secondary nd already permitted
	Site G (Central and northern Site Pornorth)- 06/01290/FULEIS Nunn Wood Harrold Road Construction of a wind Fa 125m to blade tip height, substatio	od Land Between arm comprising 16	London Road And turbines of maximum

	infrastructure. This application was received 23 rd January 2009 and was appealed 20 th December 2019. A separate previous application 08/02118/FULEIS was proposed (also comprising a windfarm development) with associated infrastructure was received 23 rd January 2009 and was appealed 20 th December 2013.
	The cable route crosses through a number of applications in the central Grendon Lakes and River Nene area given the historical gravel extraction.
Off-Site Applications	There is an application for a proposed solar farm on land located the north east of Grendon sub-station (Ref. NW/21/00629/SCQ). In addition, a number of applications relate to the sand and gravel extraction activities in the central area near the River Nene.
	No additional potentially contaminative activities or other information pertinent to this assessment was identified from the historical planning records.

2.7 Previous Reports

No third party reports have been made available to review from the Client or sourced through a review of planning application records.

3.0 Conceptual Site Model

3.1 Introduction

A Conceptual Site Model (CSM) represents the relationships between contaminant sources, pathways and receptors, to support the identification and assessment of contaminant linkages.

3.2 Overall Site Sensitivity

The Site is considered to be of a low to moderate environmental sensitivity given the historical and current agricultural use as well as the underlying aquifer designations.

3.3 Potential Contamination Sources

A source is a contaminant or pollutant that is in, on or under the land that has the potential to cause harm or pollution.

Potential sources of contamination are limited to any small scale spills/leaks associated with the agricultural use of the Site and Made Ground associated with discrete areas of development such as agricultural barns (Site C , E and G), a sewage works (Site E) and existing roadways which may be crossed as part of the cable corridor.

Locally residual contaminants may be present associated with the historical guarrying in Sites A, C and E.

No potential significant sources of ground gases or vapours have been identified on or off-Site, although parts of the Site are within land potentially impacted by elevated Radon.

Historic inert landfills have been identified associated with Sywell Range. It is anticipated that the residual contamination presented by the historic landfills and any potential contamination from the firing range will present a low risk to the proposed development. Additionally, the proposed cable route will not enter the area identified as historic landfill further reducing the risk.

3.4 Potential Pathways

A pathway is a route by which a receptor is or could be affected by contaminant.

The potential pathways are considered to be as follows:

Direct contact, ingestion or inhalation of soil bound contaminants / dust during or following redevelopment.

Inhalation of organic vapours associated with contamination.

Migration of ground gas / vapours into on-Site buildings causing asphyxiation or risk of explosion.

Leaching of contamination into groundwater followed by migration of groundwater to the wider groundwater environment or discharge to surface waters.

Direct contact between aggressive ground conditions and new infrastructure.

3.5 Potential Receptors

A receptor is something that could be adversely affected by a contaminant, for example a person, controlled waters, an organism, an ecosystem, or Part 2A receptors such as buildings crops or animals.

Relevant potential receptors are considered to include:

Construction workers;

Third parties during construction (adjacent Site users and adjacent residents);

Future Site users and maintenance workers;

Surface waters (ponds, drainage ditches and the River Nene) on Site and in the surrounding area;

The underlying aguifers (Secondary A, B and Principal);

The Built Environment (new buildings and infrastructure / utilities).

3.6 Contaminant Linkage Assessment

The table below considered the potential pollutant linkages present on-Site.

Contaminant Linkage Assessment				
Source(s)	Pathway(s)	Receptor(s)	Risk	Comments
	Direct contact/ ingestion and inhalation of dust and vapours.	Site users.	Very Low Risk	No significant potential sources of contamination have been identified associated with the historical agricultural use of the Site. Given the very low sensitivity end use comprising a solar farm the risk to future Site users is considered very low. No further works are considered to be required.
Potentially contaminated soils and/or	Direct contact, ingestion and inhalation of dust and vapours.	Maintenance workers during any future sub- surface works at the Site.	Very Low Risk	Site workers may become exposed to localised contaminated soils and shallow groundwater during intrusive groundworks undertaken at the Site. Safe working practices should be undertaken and appropriate Personal Protective Equipment (PPE) should be used that will reduce the risk to low. Intrusive investigation will inform potential risks in new development areas.
groundwater located beneath the Site.	Leaching of contaminants and vertical migration.	Groundwater beneath the Site.	Very Low Risk	No significant potential sources have been identified and there are no licensed groundwater abstraction records for potable water within 500 m of the Site, as such, the risk to controlled waters is considered very low.
	Direct contact.	Buried infrastructure.	Low Risk	Sulphates within the ground have the potential to attack buried infrastructure. Based on the anticipated natural soils at the Site, the risk is considered low, however it would be prudent to assess the sulphate class of the soils at the time of any geotechnical investigation. It is considered unlikely that new potable supply pipes are
Ground gas /	Vertical and lateral	Site users & the		No significant potential sources of ground gas have been identified. In addition, given the very low sensitivity end use
Radon	migration of ground gases.	buildings on-Site.	Very Low Risk	comprising a solar farm with limited infrastructure comprising battery storage and sub-stations, the potential for hazardous

	Contaminant Linkage Assessment			
Source(s)	Pathway(s)	Receptor(s)	Risk	Comments
				ground gas to accumulate is consider very low as such no further assessment is required.
				The requirement for Radon protection measures will depend on the location of any enclosed confined spaces as part of the proposed development, but the incorporation of Radon protection measures, if ultimately required, will reduce the potential risk associated with elevated Radon.

4.0 Conclusions & Recommendations

4.1 Land Contamination Risks and Liabilities

Uncertainty and Data Gaps	This assessment is based on desk study information only. No Site specific ground investigation data has made available for review.
Soils	Given the very low sensitivity end use comprising a solar farm the risk to future Site users is considered very low and no further assessment is required.
Groundwater	No significant potential sources have been identified and there are no licensed groundwater abstraction records for potable water within 500 m of the Site, as such, the risk to controlled waters is considered very low.
Ground Gas	No significant potential sources have been identified. In addition, given the very low sensitivity end use comprising a solar farm with limited infrastructure comprising battery storage and sub-stations, the potential for hazardous ground gas to accumulate is consider very low as such no further assessment is required.
	The requirement for Radon protection measures will depend on the location of any enclosed confined spaces as part of the proposed development, but the incorporation of Radon protection measures, if ultimately required, will reduce the potential risk associated with elevated Radon.
Potential Contaminated Land Development Risks	Widespread contamination is considered unlikely and the preliminary risk assessment has identified a very low to low risk of soil/groundwater contamination and hazardous ground gas at the Site.

4.2 Geotechnical Considerations

Uncertainty and Data Gaps	This assessment is based on desk study information only. No Site specific ground investigation data has made available for review.
Preliminary Ground Model	Based on the available information, it is anticipated that the majority of the Site is likely underlain by Topsoil and superficial deposits of Oadby Member. Alluvium and sands and gravels may be identified in the southern area of the scheme. The underlying bedrock varies across the Site. Given the relatively consistent presence of drainage ditches across the Sites, groundwater is expected to be shallow or perched. Groundwater may also be present at depth within the underlying bedrock strata.
Plausible Geo-Hazards	The geohazards listed below have been identified to follow guidance presented in the HE document CD622 'Managing Geotechnical Risk' (2019) which aims to identify and manage the geotechnical risks associated with a scheme throughout its lifespan, from planning to construction to maintenance. The following geohazards are considered to be substantial ground related risks associated with the proposed development. A substantial risk is defined by Delta-Simons in Appendix C. Potential for Made Ground associated with historical development (Site C and E)/former quarries in Site A, C and E. Made Ground is typically variable in nature and strength with a potentially low bearing capacity and unacceptable levels of total/differential settlement may occur; Potential soft, variable and compressible superficial Alluvial deposits which have potentially low bearing capacity and unacceptable levels of total/differential settlement may occur;

The Sites vary from \sim 130m AOD across Site A and B to \sim 60 m AOD in Site F. The sloping ground across the Sites may require earthworks to support the development;

There is the potential for shrink/swelling clays associated with the bedrock and due to trees bordering the Site;

Sulphate testing may be required to determine a suitable concrete grade for any buried infrastructure;

High groundwater table/perched groundwater can lead to unstable excavations which will required suitable shoring and dewatering; and

Variable strata could lead to further requirements for suitable shoring of excavations.

4.3 Recommendations and Other Development Considerations

Recommendations

The following recommendations are considered appropriate;

Confirmation on the routes of below ground services crossing the route, including gas pipelines present in the Site area;

A geotechnical Site investigation to assess in-situ geotechnical soil strength testing / laboratory testing and CBRs, in order to inform proposed foundation/roadway design;

Prior to development works commencing, confirmation should be sought as to the potential requirement for Radon protection measures in any new buildings / internal confined spaces, incorporated within the development;

A discovery strategy should be put in place for groundworks to act upon should potential contamination be identified; and

Subject to the proposed development scheme a Materials Management Plan (MMP) may be required in accordance with regulatory protocols during redevelopment.

Appendix A - Limitations

Limitations

This Report was prepared by Delta-Simons Ltd (Delta-Simons) for the sole and exclusive use of the Client and for the specific purpose for which Delta-Simons was instructed. Nothing contained in this Report shall be construed to give any rights or benefits to anyone other than the Client and Delta-Simons, and all duties and responsibilities undertaken are for the sole and exclusive benefit of the Client and not for the benefit of any other party. Delta-Simons does not intend, without its written consent through a formal letter of reliance or warranty, for this Report to be disseminated to any party other than the named Client or to be used or relied upon by any party other than the named Client. Use of the Report by any other party is unauthorised and such use is at the sole risk of the user. Any party using or relying upon this Report, other than the Client, agrees by virtue of its use to indemnify and hold harmless Delta-Simons from and against all claims, losses and damages (of whatsoever nature and howsoever or whensoever arising), arising out of or resulting from the performance of the work by Delta-Simons. Unless explicitly agreed otherwise, in writing, this Report has been prepared under Delta-Simons' Standard Terms and Conditions as included within our proposal to the Client.

The recommendations contained within this Report represent Delta-Simons professional opinions, based upon the information detailed within the Report, exercising the reasonable skill and care to be expected of a professional consultant holding itself out as having the competence, experience and resources necessary for the purpose of carrying out similar work in scope and character to the services performed. The Report needs to be considered in the light of the proposal and associated limitations of scope. The Report needs to be read and considered in full and isolated sections cannot be used without full reference to other elements of the report and any previous works referenced within the Report.

Where Delta-Simons has obtained, reviewed and evaluated information in preparing this Report from the Client and others and Delta-Simons conclusions, opinions and recommendations has been reasonably determined using this information, Delta-Simons does not warrant the accuracy of the third-party information provided to it and cannot be responsible for any opinions which Delta-Simons has expressed, or conclusions which it has reached in reliance upon information which is subsequently proven to be inaccurate.

Site surveys document the conditions encountered at the time of survey only and conditions may change due to natural processes or human intervention. As such, surveys represent an assessment at a specific point in time and Delta-Simons cannot be responsible for adverse conditions which arise or become apparent after the time of the survey or for conditions which sit outside the scope for which the survey or Report was commissioned.

Where intrusive investigations have been completed, information, comments and opinions given in this report are based on the ground conditions encountered during the site work period and on the results of laboratory and field tests performed during the investigation. Ground conditions are inherently variable such that no investigation can be exhaustive to the extent that all adverse conditions are revealed. Conditions may therefore be present beneath the site that were not apparent in the data reviewed or obtained as part of this assessment. It should be noted that groundwater levels vary due to seasonal and other effects and may at times differ to those measured during the investigation. Delta-Simons does not warrant or guarantee that the Site is free of hazardous or potentially hazardous materials or conditions. Where risk assessment is undertaken, this is based upon the standards, guidance and common practice at the time of the assessment and Delta-Simons cannot be responsible for conditions which become apparent following changes in guidance or practice or advancements in scientific knowledge which change the position in relation to assessment of risk.

No aspect of this Report constitutes a design. Where this information is used in design, the designer should verify the information has been used appropriately.

Where budgets are prepared and presented within the Report, these are for information only to indicate the likely magnitude of a cost and do not represent an invitation to treat for the works. All budgets and programmes presented should be reviewed and verified by appropriately qualified and experienced independent Project Managers and Cost Consultants.

Appendix B - Data Sources

In completing this Assessment, Delta-Simons has utilised the following data sources and third party information:

Current and Historical Ordnance Survey (OS) maps;

British Geological Survey (BGS) data;

Environment Agency (EA) online data;

Coal Authority (CA) online data;

A Landmark Envirocheck® Report for the Site (Ref. 331729469_1_1 and 324847725_1_1), dated 18th January 2024 and 15th November 2023;

Historical Maps included as part of the Envirocheck Report; and

Information provided by Wellingborough Council, West Northamptonshire Council and North Northamptonshire Council.

Appendix C - Risk Definitions

Contaminated Land Risk Definitions

The following methodology is based on the methodology presented in CIRIA C552 Contaminated Land Risk Assessment: A Guide to Good Practice 2001. It requires the classification of the:

Magnitude of the potential consequence (severity) of the Risk occurring: and

Magnitude of the Probability (likelihood) of the Risk occurring.

The classifications are then compared to indicate the risk presented by each pollutant linkage.

Consequence to Receptor Definition Matrix

	Human Health	Controlled Waters	Buildings/Services
	Acute or chronic permanent	Sensitive controlled water pollution ongoing, or just about	Catastrophic collapse
Consequence	liuman neam	sensitive controlled water	
Mild Consequence		controlled water	Damage to building rendering it unsafe.to occupy (e.g. foundation damage resulting in instability).
Minor Consequence	Non-permanent health effects to human health (easily prevented by means such as personal protective clothing etc).	Slight discoloration of water	Easily repairable effects of damage to buildings, structures and services, i.e. discoloration of concrete

Probability Definitions

Probability	Definition in Context
Higher	There is a pollution linkage and an event that either appears very likely in the short term and almost inevitable over the long term, or there is evidence at the receptor of harm or pollution.
	Positive evidence of source, pathway and receptor.
Likely	There is a pollution linkage and all the elements are present and in the right place, which means that it is probable that an event will occur. Circumstances are such that an event is not inevitable, but possible in the short term and likely over the long term. Suspect source, pathway, and receptor
Low Likelihood	There is a pollution linkage and circumstances are possible under which an event could occur. However, it is by no means certain that even over a longer period such event would take place, and is less likely in the shorter term.
- ,	There is a pollution linkage but circumstances are such that it is improbable that an event would occur even in the very long term. No evidence of hazard, pathway, and receptor

Standard Risk Matrix

		Consequence/Magnitude of impact			
		Severe	Medium	Mild	Minor
Probability	High	Very High	High	Moderate	Moderate/Low
	Likely	High	Moderate	Moderate/low	Low
	Low Likelihood	Moderate	Moderate/low	Low	Very Low
	Unlikely	Moderate/low	Low	Very Low	Very Low

Classified Risks and Likely Action

	•
Significance Level	Definition/Comments
Very High Risk	There is a high probability that severe harm could arise to a designated receptor from an identified hazard, OR, there is evidence that severe harm to a designated receptor is currently happening. This risk, if realised, is likely to result in a substantial liability. Urgent investigation (if not undertaken already) and remediation are likely to be required. Demonstrable contaminated land situation, highest threat & liability level, urgent action recommended.
High Risk	Harm is likely to arise to a designated receptor from an identified hazard. Realisation of the risk is likely to present a substantial liability. Urgent investigation (if not undertaken already) is required and remedial works may be necessary in the short term and are likely over the longer term. Likely contaminated land situation, risk assessment and action recommended.
Moderate	It is possible that harm could arise to a designated receptor from an identified hazard. However, if is either relatively unlikely that any such harm would be severe, or if any harm were to occur it is more likely that the harm would be relatively mild. Investigation (if not already undertaken) is normally required to clarify the risk and to determine the potential liability. Some remedial works may be required in the longer term. Plausible contaminated land situation, risk assessment and possible action recommended.
Low Risk	It is possible that harm could arise to a designated receptor from an identified hazard, but it is likely that this harm, if realised, would at worst normally be mild. Unlikely contaminated land situation, possible risk assessment and possible action.
Very Low Risk	There is a low possibility that harm could arise to a receptor. In the event of such harm being realised it is not likely to be severe. Negligible risk, no action recommended except vigilance for changes in conditions.

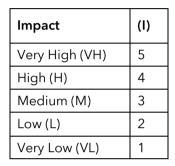

Geotechnical Risk Classification

The geohazards listed in the report within Section 4 follow guidance presented in Clayton, C.R.I. (2001) *Managing Geotechnical Risk*, Thomas Telford and the National Highways document CD622 'Managing Geotechnical Risk' (2020) which aims to identify and manage the geotechnical risks associated with a scheme throughout its lifespan, from planning to construction to maintenance.

For each geohazard the probability of the hazard occurring (P) has been considered together with the impact it would have (I) if it were to happen to calculate the risk rating between 1 and 25.

Risks that fall within Moderate, Significant and Severe categories below are considered to be **substantial** and are therefore listed within the report.

Probability	(P)
Very Likely (VLk)	5
Likely (Lk)	4
Plausible (P)	3
Unlikely (U)	2
Very Unlikely (VU)	1

(R)	Risk
20 - 25	Severe
15 - 19	Substantial
10 - 14	Moderate
5 - 9	Minor
1 - 4	Negligible

Ordnance Survey Plan Published 1958 Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Large-Scale National Grid Data Published 1993 Source map scale - 1:2,500

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

## **Northamptonshire Published 1951 - 1952** Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

# **Large-Scale National Grid Data** Published 1993 Source map scale - 1:2,500

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Northamptonshire Published 1900 - 1901 Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Northamptonshire Published 1926

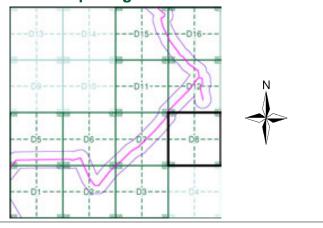

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

### Source map scale - 1:2,500

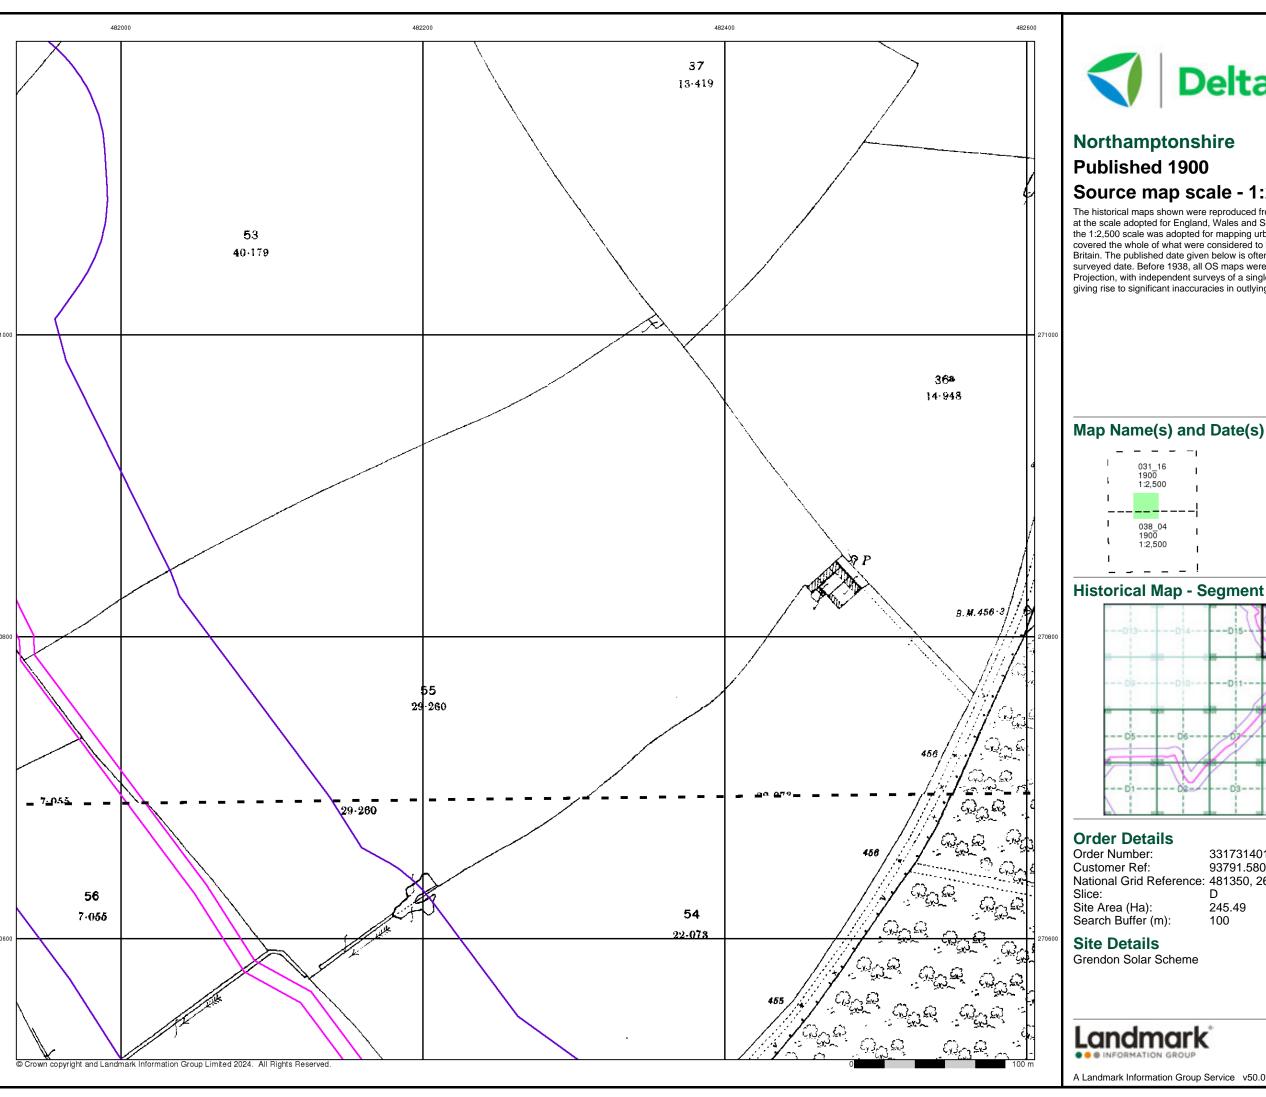

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Northamptonshire Published 1884 - 1885 Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Northamptonshire Published 1884 - 1885 Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Large-Scale National Grid Data Published 1993 Source map scale - 1:2,500

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Ordnance Survey Plan Published 1965 Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Large-Scale National Grid Data Published 1993 Source map scale - 1:2,500

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

# **Northamptonshire Published 1884** Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

# **Ordnance Survey Plan Published 1975** Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

# **Northamptonshire Published 1884** Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

# **Ordnance Survey Plan Published 1958** Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

## **Northamptonshire Published 1884** Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

# 10k Raster Mapping Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

## Ordnance Survey Plan Published 1965 - 1972 Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

## **Large-Scale National Grid Data** Published 1993 Source map scale - 1:2,500

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

# Ordnance Survey Plan Published 1972 Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

# **Large-Scale National Grid Data**

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

## **Northamptonshire** Published 1884 - 1885 Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

# **Ordnance Survey Plan Published 1971 - 1977** Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

# Northamptonshire

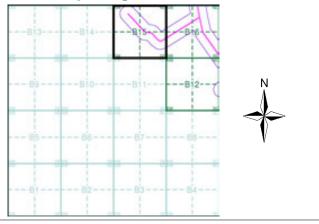

# Published 1885 Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

# **Large-Scale National Grid Data** Published 1993 Source map scale - 1:2,500

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

# **Northamptonshire** Published 1884 - 1885 Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

# **Northamptonshire** Published 1900 - 1901 Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

# **Large-Scale National Grid Data** Published 1993 Source map scale - 1:2,500

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

# Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.
