North Wales Wind Farm Connections

Interested party 10031169

Response to Examining Authority's question for the deadline 1 September 2015, 12 Noon.

- Reference 5.4
 - I am concerned about the lack of clarity on decommissioning in some of the most staggeringly natural and beautiful areas of rural Wales.
- Reference 6.11
 - In relation to bio-diversity interests, in combination effects of the grid connection and Wind Farm development (particularly at Clocaenog Forest) are of serious concern and serve to illustrate why grid connection and Wind Farm applications should be determined together.
- Reference 8.1 – Land and visual impact
 - I do not agree with the statement. On balance, undergrounding would be the least worst option for this development, because of its effect on visual tranquillity.
- Reference 10.1

Those visiting the area for peace and tranquillity are unlikely to return to what would be a more industrialised landscape with factory-sized Wind Farms. Therefore, in my opinion, there would be a negative effect on tourism in the area.
