# APPENDIX 21.6 HERITAGE AND ARCHAEOLOGY CUMULATIVE EFFECT ASSESSMENT MATRIX (STAGE 1 & 2)

---

## 1.1. INTRODUCTION

- 1.1.1.1. This document should be read in conjunction with Chapter 29 (Cumulative Effects) of the Environmental Statement ('ES') Volume 1 (document reference 6.1.29) and Chapter 21 (Heritage and Archaeology) of the ES Volume 1 (document reference 6.1.21) and Appendix 21.7 (Heritage and Archaeology Cumulative Effects Assessment Matrix (Stage 3 & 4)) of the ES Volume 3 (document reference 6.1.21.7).
- 1.1.1.2. The Cumulative Effects Assessment ('CEA') for the Proposed Development follows the recommended approach as detailed by the Planning Inspectorate ('PINS') in PINS Advice Note Seventeen (Planning Inspectorate, 2015). This document summarises the first stages of the CEA approach which include:
- Stage 1 – Establish a Zone of Influence ('ZOI') for each environmental discipline and identify long list of 'other developments'; and
  - Stage 2 – Identify a shortlist of 'other developments'.
- 1.1.1.3. In order to screen projects for the CEA relating to Heritage and Archaeology, the following threshold criteria has been applied:
- The ZOI for other developments has been identified as up to 2 km in Section 1 (Converter Station Area) and 500 m in Section 10 (Landfall) from Eastney Landfall.
  - The scale and nature of other developments: projects greater than 0.5 ha, used as a threshold for likely significant effects in Schedule 2 of the EIA Regulations. However, it is also acknowledged that some projects under this threshold may give rise to cumulative effects, so projects within 100 m of the Order Limits are included due to their proximity to the Proposed Development.

- Temporal scope: construction would need to fall within 1 year with AQUIND construction for cumulative construction effects to be applied.
- Cumulative effects in relation to below-ground archaeological remains have been scoped out; For buried heritage assets, which are buried and therefore intangible it is not feasible to quantify accurately the nature of the resource across the whole study area and beyond, which would enable the identification of a cumulative impact and potential elevated effect.

1.1.1.4. Table 1 lists the long and short list of developments for consideration as part of the CEA for the Proposed Development
