Dear Sir / Madam

I live on the route proposed for the enormous cables emitting electromagnetic fields.

I intend to be living here for the next 40 years.

I am very concerned that the long term health impacts of this technology are unknown.

It is known that the technology heats up body tissues... Constantly for 40 years.... Can't Be a good thing!!

It is also reported by World Health Organisation that they are contuing to investigate links between power lines and cancer.

I attach an extract from the WHO, please consider if this was your home, would you support it...

- The main effect of radiofrequency electromagnetic fields is heating of body tissues.
- There is no doubt that short-term exposure to very high levels of electromagnetic fields can be harmful to health. Current public concern focuses on possible long-term health effects caused by exposure to electromagnetic fields at levels below those required to trigger

acute biological responses.

- WHO's International EMF Project was launched to provide scientifically sound and objective answers to public concerns about possible hazards of low level electromagnetic fields.
- Despite extensive research, to date there is no evidence to
