# ENVIRONMENTAL STATEMENT ERRATA SHEET 2

1.1.1.1. This Errata Sheet details further minor errors in the 2019 ES Chapters and sets out their amendments in Table 1 below.

**Table 1 – Errata noted in the 2019 ES**

Location in the 2019 ES	Error noted in the 2019 ES	Amended text in ES Addendum
<b>Appendix 7.1 (Marine Water Framework Directive Assessment) (APP-372)</b>	Paragraph 1.7.2.6 contains an error referring to the maximum area of habitat loss as a result of rock placement within the Isle of Wight East water body.	The paragraph should instead read: <i>Permanent habitat loss as a result of rock placement is expected to incur a maximum loss of 0.66 km<sup>2</sup>, which includes contingency for post construction repair and maintenance (Chapter 3 (Description of the Proposed Development)). Whilst it is not currently known where rock placement as non-burial protection will be required, it is assumed as a worst-case that it can occur anywhere along the cable route, affecting a proportion of several habitats, or all placed in one habitat type.</i>
<b>Appendix 7.1 (Marine Water Framework Directive Assessment) (APP-372)</b>	Paragraph 1.7.2.7 contains an error referring to the maximum percentage of subtidal soft sediment habitat loss as a result of rock placement within the Isle of Wight East water body.	The paragraph should instead read: <i>Should all rock placement be required in the Isle of Wight East water body, this loss represents 1.24% of subtidal soft sediments (A5.2, A5.3 and A5.4) based on figures provided in the summary table accompanying EA (2017) guidance. Subtidal mixed</i>

Location in the 2019 ES	Error noted in the 2019 ES	Amended text in ES Addendum
		<p><i>sediment habitat is widely available in the Isle of Wight East water body. The potential habitat loss is therefore not expected to affect the overall availability or functioning of the wider habitat in Isle of Wight East.</i></p>
