Please stop the Aquind proposal to push the action through, there is no need for it, there are three ways into the city, imagine the immense disruption that will cause to the city a third of these roads impassable for a long , long time.

Aquind has no experience at all and the Government are intent on carrying out this proposal for less than five pounds per annum, why??

The flora and fauna of the route through the city are suffering a blow already and the installation will be hard for them to take, less birds, souless city imagine if you had that to live in.

There must be other ways of supplying the energy we need.
