The report has been prepared for the exclusive use and benefit of the Applicants and solely for the purpose for which it is provided. Unless otherwise agreed in writing by RPS Group Ltd, any of its subsidiaries, or a related entity (collectively 'RPS') no part of this report should be reproduced, distributed or communicated to any third party. RPS does not accept any liability if this report is used for an alternative purpose from which it is intended, nor to any third party in respect of this report. The report does not account for any changes relating to the subject matter of the report, or any legislative or regulatory changes that have occurred since the report was produced and that may affect the report.

The report has been prepared using the information provided to RPS by its client, or others on behalf of its client. To the fullest extent permitted by law, RPS shall not be liable for any loss or damage suffered by the client arising from fraud, misrepresentation, withholding of information material relevant to the report or required by RPS, or other default relating to such information, whether on the client's part or that of the other information sources, unless such fraud, misrepresentation, withholding or such other default is evident to RPS without further enquiry. It is expressly stated that no independent verification of any documents or information supplied by the client or others on behalf of the client has been made. The report shall be used for general information only.

# **Glossary**

Term	Meaning
400 kV grid connection cables	Cables that will connect the proposed onshore substations to the existing National Grid Penwortham substation.
Applicants	Morgan Offshore Wind Limited (Morgan OWL) and Morecambe Offshore Windfarm Ltd (Morecambe OWL).
Baseline	The status of the environment without the Transmission Assets in place.
Climate change	A change in global or regional climate patterns, in particular a change apparent from the mid to late 20th century onwards and attributed largely to the increased levels of atmospheric carbon dioxide produced by the use of fossil fuels.
Cumulative Effects	The combined effect of the Transmission Assets in combination with the effects from other proposed developments, on the same receptor or resource.
Design envelope	A description of the range of possible elements and parameters that make up the Transmission Assets options under consideration, as set out in detail in Volume 1, Chapter 3: Project Description. This envelope is used to define the Transmission Assets for EIA purposes when the exact engineering parameters are not yet known. This is also referred to as the Maximum Design Scenario or Rochdale Envelope approach.
Development Consent Order	An order made under the Planning Act 2008, as amended, granting development consent.
Effect	The term used to express the consequence of an impact. The significance of effect is determined by correlating magnitude of the impact with the importance, or sensitivity, of the receptor or resource in accordance with defined significance criteria.
EIA Scoping Report	A report setting out the proposed scope of the Environmental Impact Assessment process. The Transmission Assets Scoping Report was submitted to The Planning Inspectorate (on behalf of the Secretary of State) for the Morgan and Morecambe Offshore Windfarms Transmission Assets in October 2022.
Environmental Statement	The document presenting the results of the Environmental Impact Assessment process.
Generation Assets	The generation assets associated with the Morgan Offshore Wind Project and the Morecambe Offshore Windfarm include the offshore wind turbines, inter-array cables, offshore substation platforms and platform link (interconnector) cables to connect offshore substations.
Greenhouse gas	A gas that absorbs and emits radiant energy within the thermal infrared range, causing the greenhouse effect. Examples include carbon dioxide and methane.
Impact	Change that is caused by an action/proposed development, e.g., land clearing (action) during construction which results in habitat loss (impact).
Intertidal Infrastructure Area	The temporary and permanent areas between MLWS and MHWS.

Term	Meaning	
Landfall	The area in which the offshore export cables make landfall (come on shore) and the transitional area between the offshore cabling and the onshore cabling. This term applies to the entire landfall area at Lytham St. Annes between Mean Low Water Springs and the transition joint bays inclusive of all construction works, including the offshore and onshore cable routes, intertidal working area and landfall compound(s).	
Local Authority	A body empowered by law to exercise various statutory functions for a particular area of the United Kingdom. This includes County Councils, District Councils and County Borough Councils.	
Local Planning Authority	The local government body (e.g., Borough Council, District Council, etc.) responsible for determining planning applications within a specific area.	
Marine licence	The Marine and Coastal Access Act 2009 requires a marine licence to be obtained for licensable marine activities. Section 149A of the Planning Act 2008 allows an applicant for to apply for 'deemed marine licences' in English waters as part of the development consent process.	
Maximum design scenario	The realistic worst case scenario, selected on a topic-specific and impact specific basis, from a range of potential parameters for the Transmission Assets.	
Mean High Water Springs	The height of mean high water during spring tides in a year.	
Mean Low Water Springs	The height of mean low water during spring tides in a year.	
Morecambe OWL	Morecambe Offshore Windfarm Ltd is a joint venture between Zero-E Offshore Wind S.L.U. (Spain) (a Cobra group company) (Cobra)and Flotation Energy Ltd.	
Morgan and Morecambe Offshore Wind Farms: Transmission Assets	The offshore and onshore infrastructure connecting the Morgan Offshore Wind Project and the Morecambe Offshore Windfarm to the national grid. This includes the offshore export cables, landfall site, onshore export cables, onshore substations, 400 kV grid connection cables and associated grid connection infrastructure such as circuit breaker compounds.	
	Also referred to in this report as the Transmission Assets, for ease of reading.	
Morgan OWL	Morgan Offshore Wind Limited is a joint venture between bp Alternative Energy investments Ltd. and Energie Baden-Württemberg AG (EnBW).	
Offshore export cables	The cables which would bring electricity from the Generation Assets to the landfall.	
Offshore Order Limits	See Transmission Assets Order Limits: Offshore (below).	
Offshore Wind Leasing Round 4	The Crown Estate auction process which allocated developers preferred bidder status on areas of the seabed within Welsh and English waters and ends when the Agreements for Lease are signed.	
Onshore export cables	The cables which would bring electricity from the landfall to the onshore substations.	

Term	Meaning
Onshore Infrastructure Area	The area within the Transmission Assets Order Limits landward of Mean High Water Springs. Comprising the offshore export cables from Mean High Water Springs to the transition joint bays, onshore export cables, onshore substations and 400 kV grid connection cables, and associated temporary and permanent infrastructure including temporary and permanent compound areas and accesses. Those parts of the Transmission Assets Order Limits proposed only for ecological mitigation/biodiversity benefit are excluded from this area.
Onshore Order Limits	See Transmission Assets Order Limits: Onshore (below).
Onshore substations	The onshore substations will include a substation for the Morgan Offshore Wind Project: Transmission Assets and a substation for the Morecambe Offshore Windfarm: Transmission Assets. These will each comprise a compound containing the electrical components for transforming the power supplied from the generation assets to 400 kV and to adjust the power quality and power factor, as required to meet the UK Grid Code for supply to the National Grid.
Planning Inspectorate	The agency responsible for operating the planning process for applications for development consent under the Planning Act 2008.
Preliminary Environmental Information Report	A report that provides preliminary environmental information in accordance with the Infrastructure Planning (Environmental Impact Assessment) Regulations 2017. This is information that enables consultees to understand the likely significant environmental effects of a project and which helps to inform consultation responses.
Scoping Opinion	Sets out the Planning Inspectorate's response (on behalf of the Secretary of State) to the Scoping Report prepared by the Applicants. The Scoping Opinion contains the range of issues that the Planning Inspectorate, in consultation with statutory stakeholders, has identified should be considered within the Environmental Impact Assessment process.
Study area	This is an area which is defined for each environmental topic which includes the Transmission Assets Order Limits as well as potential spatial and temporal considerations of the impacts on relevant receptors. The study area for each topic is intended to cover the area within which an impact can be reasonably expected.
Substation	Part of an electrical transmission and distribution system. Substations transform voltage from high to low, or the reverse by means of electrical transformers.
The Secretary of State for Energy Security and Net Zero	The decision maker with regards to the application for development consent for the Transmission Assets.
Transboundary effects	Effects from a project within one state that affect the environment of another state(s).
Transmission Assets	See Morgan and Morecambe Offshore Wind Farms: Transmission Assets (above).
Transmission Assets Order Limits	The area within which all components of the Transmission Assets will be located, including areas required on a temporary basis during construction and/or decommissioning

Term	Meaning	
Transmission Assets Order Limits: Offshore	The area within which all components of the Transmission Assets seaward of Mean Low Water Springs will be located, including areas required on a temporary basis during construction and/or decommissioning.	
	Also referred to in this report as the Offshore Order Limits, for ease of reading.	
Transmission Assets Order Limits: Onshore	The area within which all components of the Transmission Assets landward of Mean High Water Springs will be located, including areas required on a temporary basis during construction and/or decommissioning (such as construction compounds).	
	Also referred to in this report as the Onshore Order Limits, for ease of reading.

### 1 Cumulative screening matrix and location plan

#### 1.1 Introduction

- 1.1.1.1 This document forms Volume 1, Annex 5.5: Cumulative screening matrix and location plan of the Environmental Statement (ES) prepared for the Morgan and Morecambe Offshore Wind Farms: Transmission Assets (hereafter referred to as the Transmission Assets). The ES presents the findings of the Environmental Impact Assessment (EIA) process for the Transmission Assets.
- 1.1.1.2 This annex provides details of the approach to identifying other developments to be considered within the Cumulative Effects Assessment (CEA). It also provides the CEA long list (both onshore and offshore) and cumulative effects screening matrix.
- 1.1.1.3 The CEA long lists and cumulative effects screening matrix have been updated following PEIR to ensure that any additional data on applications already in the CEA long list or additional cumulative applications of allocations are fully considered within the Environmental Statement (ES). This list has been informed by consultation and modelling of Zones of Influence (ZOI). For the purposes of undertaking the assessment work, the CEA long lists were finalised in September 2024 (for onshore and offshore) for use in this CEA matrix. However, the list remains a live document to be continually updated through submission and examination in accordance with guidance (see section 1.3.1). Therefore, the long lists will be considered and updated as new information regarding other existing developments and/or approved developments that come forward after the finalisation of the CEA matrix for the submission of the DCO.(in accordance with guidance (see section 1.3.1)).

### 1.2 Legislative requirements

- 1.2.1.1 As set out in Volume 1, Chapter 1: Introduction of the ES, following a request from the Applicants, on 4 October 2022 the Secretary of State issued a Section 35 direction that the Transmission Assets are to be treated as development for which development consent is required under the Planning Act 2008, as amended.
- 1.2.1.2 The legislative requirements for EIA are set by the Infrastructure Planning (Environmental Impact Assessment) Regulations 2017, as amended (referred to in this report as the 2017 EIA Regulations), which set out requirements for EIA under the Planning Act 2008.
- 1.2.1.3 The 2017 EIA Regulations require:

'A description of the likely significant effects of the development on the environment resulting from, inter alia—

. . .

(e)the cumulation of effects with other existing and/or approved projects, taking into account any existing environmental problems relating to areas of

particular environmental importance likely to be affected or the use of natural resources; ...' (Schedule 4, Part 5)

- 1.2.1.4 This requirement is fulfilled through the CEA, which considers the cumulative effects of the Transmission Assets together with other proposed developments. This includes, for example, effects on a single receptor that may arise from the Transmission Assets in combination with one or more of the other proposed developments identified.
- 1.2.1.5 Further details on legislation and policy relevant to the Transmission Assets, are provided in Volume 1, Chapter 2: Policy and legislation context of the ES.

#### 1.3 Methodology

#### 1.3.1 Overview

- 1.3.1.1 Cumulative effects are effects on a single receptor arising from the Transmission Assets when considered alongside the likely effects arising from other proposed developments. This includes projects that were not present at the time of data collection or survey and, as such, are not considered as part of the baseline for the topic being assessed. The exact approach taken by each technical topic has been described within the CEA section of the relevant ES chapters. Further information on the cumulative effects approach is set out within Volume 1, Chapter 5: Environmental assessment methodology of the ES.
- 1.3.1.2 The CEA for the Transmission Assets has been undertaken in accordance with the following guidance.
  - The Planning Inspectorate's Advice Note Seventeen, version 2 (Planning Inspectorate, 2019).
  - Cumulative Impacts Assessment Guidelines: Guiding Principles for Cumulative Impacts Assessment in Offshore Wind Farms (RenewableUK, 2013).
- 1.3.1.3 Advice Note Seventeen recommends that CEA should be a staged/sequential, but iterative process, with the process repeated several times as part of the drafting of the ES. The suggested stages are as follows.
  - **Stage 1** Establish the project's ZOI for each topic and identify a long list of 'other development', with mapping where possible.
  - Stage 2 Screening of long list: Identify a refined list of 'other development' for the CEA using the application of topic specific threshold criteria.
  - Stage 3 Information gathering on each of the 'other existing development and/or approved development' included in the refined list at Stage 2.
  - Stage 4 Assessment of the cumulative effects of the proposed development with the 'other existing development and/or approved development' identified in Stages 1-3 of the process outlined above.

#### 1.3.2 Stage 1

- 1.3.2.1 Under the first stage of the CEA, a long list of relevant projects, plans and activities occurring within a ZOI around the Transmission Assets is developed. For the onshore elements of the Transmission Assets the initial ZOI was between 1 and 5 km from the Intertidal Infrastructure Area and Transmission Assets Order Limits: Onshore (hereafter referred to as the Onshore Order Limits) (depending on the topic) with onshore windfarm applications considered up to 40 km from the Transmission Asset Order Limits. For the offshore elements of the Transmission Assets, the ZOI was 50 km from the Transmission Assets Order Limits: Offshore (hereafter referred to as the Offshore Order Limits). This was then further refined relevant to the topic specific ZOIs that are introduced in paragraph 1.3.2.4 and outlined in Table 1.1. All ZOI have been chosen based on standard industry guidance.
- 1.3.2.2 The long list includes the details of the relevant operational or planned projects, plans and activities including those in the United Kingdom (UK) and adjoining international jurisdictions based on publicly available information available at the time of preparation.
- 1.3.2.3 Planning Inspectorate Advice Note Seventeen states that:

'It is understood that applicants are required to stop assessment work at a particular point in time in order to be able to finalise and submit an application. The applicant should state any assessment cut-off date' (Planning Inspectorate, 2019).

1.3.2.4 The ZOI for each topic area has been identified primarily based on the extent of likely potential effects. Each topic area has used industry specific guidance along with professional judgement and knowledge of the local area to define the geographical ZOI. The identified ZOIs are presented in **Table 1.1** below.

Table 1.1: ZOI for CEA

Topic	ZOI
Offshore	
Physical processes	Two tidal excursions of the offshore elements of the Offshore Order Limits.
Benthic and intertidal ecology	A 50 km buffer of the offshore elements of the Offshore Order Limits, with the exception of synergistic/interactive effects, which includes two tidal excursions of the Offshore Order Limits.
Fish and shellfish	For synergistic/interactive effects, two tidal excursions of the Offshore Order Limits: Offshore, but a buffer of 50 km of the Offshore Order Limits for additive effects, as per Volume 2, Chapter 2: Benthic subtidal and intertidal ecology of the ES.
	A 100 km buffer of the offshore elements of Offshore Order Limits for impacts of construction related underwater noise.
Marine mammals	Irish Sea biogeographic region.
Offshore ornithology	A 500 km buffer from the offshore elements of the Offshore Order Limits.
Commercial fisheries	ICES rectangles 35E5, 35E6, 35E7 36E5, 36E6, 36E7, 37E5, 37E6 and 37E7.

Topic	ZOI		
Shipping and navigation	Waters of the Irish Sea to the south and east of the Isle of Man (south of 54.5 degrees north and east of 5.0 degrees west).		
Aviation, military and communications	For obstructions, 40 km from Offshore Order Limits, but a buffer of 100 km for the Offshore Order Limits for radar.		
Marine archaeology	A 2 km buffer from the Offshore Order Limits.		
Infrastructure and other users	A 50 km buffer from the Offshore Order Limits.		
Onshore			
Geology, hydrogeology and ground conditions	Within 1 km from the Onshore Order Limits.		
Hydrology and flood risk	Within 1 km of the onshore substations and 250 metres (m) from the Onshore Order Limits.		
Onshore ecology and nature conservation	The other proposed development falls within 1 km of the Onshore Order Limits and 2 km of the onshore substations.		
Onshore and intertidal ornithology	Within 1 km of the intertidal infrastructure area and Onshore Order Limits.		
Historic environment	Within 1 km of the Onshore Order Limits and 5 km of the onshore substations.		
Land use and recreation	Within 1 km of the Onshore Order Limits.		
Traffic and transport	The selection of projects was based upon those that would generate a material volume of traffic into the study area during the peak construction period of the onshore elements of the Transmission Assets (in 2027). This is based on professional judgement with regards to each sites potential timing for granting of planning consent, discharge of conditions etc, construction period and build out rate, opening year and their change in traffic generation during its build out period to when full occupation may be achieved.		
Noise and vibration	Within 250 m of the Onshore Order Limits, 1 km of the landfall and 1 km of the onshore substations.		
Air quality	Within 500 m of the Onshore Order Limits.		
Landscape and visual impact	Within 51 km for Morecambe Offshore Windfarm Generation Assets, within 40 km for onshore windfarms and within 1 km for all other onshore development.		
Aviation	The study area includes all land within the Onshore Infrastructure Area, the Intertidal Infrastructure Area and the airspace encompassing an area of 15 km from this boundary.		
Climate change	The onshore, intertidal and offshore components of the Transmission Assets The climate change risk study area also covers the Transmission Assets Or Limits.		
Socio-economics (onshore and offshore)	Spatial overlap: project is located in close proximity to the Transmission Assets.		
	Temporal overlap: construction and operation and maintenance phases anticipated to overlap.		
	Conceptual overlap: energy infrastructure project, therefore effect-receptor pathway overlaps.		

- 1.3.2.5 The overarching criteria used in the desk study for long listing potentially-relevant 'cumulative project and plans' are other developments with the potential for overlap with the Transmission Assets. This overlap is considered in terms of impacts on sensitive receptors. Additionally, projects that introduce new sensitive receptors, where existing ones are not adequately representative of effects, are also included.
- 1.3.2.6 All projects, plans and activities within the ZOI defined in the **Table 1.1** above have been identified through a desktop study. The projects, plans and activities for the CEA long list seaward of Mean High Water Springs were identified within the ZOIs as defined in **Table 1.1** and through a desktop review of the websites of the following organisations.
  - The Crown Estate.
  - The Planning Inspectorate National Infrastructure Planning.
  - Marine Scotland.
  - Crown Estate Scotland.
  - The Welsh Marine Planning Portal.
  - Natural Resources Wales.
  - Irish Government.
  - Irish Environmental Protection Agency.
  - Isle of Man Government.
  - An Bord Pleanála.
  - The Department of Agriculture, Environment and Rural Affairs.
  - European Marine Observation and Data Network data.
  - Centre for Environment, Fisheries and Aguiculture Science.
  - The Marine Management Organisation.
  - KIS-ORCA.
  - Oceanwise.
  - 4C Offshore.
  - The North Sea Transition Authority.
  - National Air Traffic Services.
  - Developers and project proponents.
- 1.3.2.7 The projects, plans and activities for the CEA long list landward of Mean Low Water Springs were identified within the ZOIs as defined in **Table 1.1** and through a desktop review of the websites of the following organisations.
  - Blackpool Council.
  - Preston City Council.
  - Fylde Council.

- South Ribble Borough Council.
- Lancashire County Council.
- South Ribble Borough Council.
- West Lancashire Borough Council.
- Chorley Council.
- Wyre Council.
- Rossendale Borough Council.
- Sefton Council.
- Health and Safety Executive.
- The Planning Inspectorate National Infrastructure Planning.
- UK Government.
- 1.3.2.8 For the consideration of onshore cumulative projects and plans, these overarching criteria generally exclude minor household applications and business applications (such as extensions or changes of use), of which there are very large numbers at any given time and are not likely to result in any potential for significant cumulative effects. Nevertheless, minor applications were reviewed within 1 km of landfall and the onshore order limits of the Transmission Assets and a judgement taken as to whether they had the potential to result in any significant cumulative effects. Any minor applications that had potential to result in significant cumulative effects were included in the CEA long list. Applications that introduce new projects within the ZOI have been identified and considered within each topic chapter, where appropriate.
- 1.3.2.9 **Table 1.2** provides a summary of the search criteria used to identify 'other developments' for the long list, applied to the consideration of onshore cumulative projects and plans only. Known 'other developments' located outside of the ZOI have been considered on a case-by-case basis as to whether they are likely to result in cumulative effects. These have been included in the long list as appropriate.

Table 1.2: Search criteria for the CEA long list (onshore)

Development /plan		Search criteria				
		Residential housing unit (no)	Residential housing area (hectare (ha))		Non- residential (ha)	
Nationally Significant Infrastructure Projects		Screened in.	Screened in.			
Transport and Works Act Orders		Screened in.				
"Major applications" to Local Planning Authority (LPA) values indicate threshold for screening decision.	Large Scale	200+	4+	10,000+	2+	
	Small Scale	10 -199	0.5 - 4	1,000 – 10,000	1-2	
Other applications to LPA		Professional judgement.				
Local Development Plan allocations		Screened in.				

1.3.2.10 All projects, plans or activities identified as being taken forward to the CEA process, are 'tiered' in accordance with the guidance set out in the Planning Inspectorate's Advice Note Seventeen (the Planning Inspectorate, 2019). This allows the level of certainty associated with the project, plan or activity to be considered. For example, projects which are already under construction are more likely to contribute to cumulative effects than those projects and plans for which an application is not yet submitted. Each development on the long list has been assigned a tier based on **Table 1.3**.

Table 1.3: Assigning uncertainty to projects, plans or activities for CEA

Tier	Criteria
Tier 1	Under construction.
	<ul> <li>Permitted application(s), whether under the Planning Act 2008 or other regimes, but not yet implemented.</li> </ul>
	Submitted application(s) whether under the Planning Act 2008 or other regimes but not yet determined.
Tier 2	Projects on the Planning Inspectorate's Programme of Projects where a scoping report has been submitted and is in the public domain.
Tier 3	Projects on the Planning Inspectorate's Programme of Projects where a scoping report has not been submitted but some information is within the public domain.
	Identified in the relevant Development Plan (and emerging Development Plans – with appropriate weight being given as they move closer to adoption) recognising that there will be limited information available on the relevant proposals.
	<ul> <li>Identified in other plans and programmes (as appropriate) which set the framework for future development consents/approvals, where such development is reasonably likely to come forward.</li> </ul>

1.3.2.11 The refined long lists identified using the above method are presented in **Appendix A** (offshore) and **Appendix B** (onshore) along with figures showing the location of each projects and plans. This list has been updated periodically during the EIA process (refer to **paragraph 1.1.1.3**), informed by consultation and modelling confirming the extent of ZOIs, and has been finalised for use in this annex in September 2024, however the longlist will continue to be updated through application and examination.

### 1.3.3 Stage 2

- 1.3.3.1 A requirement of undertaking CEA is to identify those projects, plans or activities with which the Transmission Assets may interact to produce a cumulative effect. These interactions may arise within the construction, operation and maintenance, or decommissioning phases. The process of identifying those projects, plans or activities for which there is the potential for an interaction to occur is referred to as 'screening'.
- 1.3.3.2 The following criteria have been used in screening the long listed projects and plans for inclusion in the refined long list. These criteria, however, are not exhaustive or wholly prescriptive: expert judgement by the EIA team has also been applied throughout. The following developments have been included in the refined long list.
  - EIA developments or those where an un-determined EIA screening or scoping request indicated the possibility of significant environmental effects was foreseen.
  - 'Major developments' where identified as such in planning application or decision.
  - Developments whose scale, nature or location suggests potential for particular cumulative impacts – e.g., an industrial or combustion process as a source of air or water pollutant or noise emissions, a potential large traffic generator such as distribution warehouse or retail park, or a development in proximity to designated site or other asset.
  - Completed developments that may not be captured in baseline studies (e.g., due to very recent start of operation).
  - Developments that introduce sensitive receptors for which the assessment of effects on existing sensitive receptors identified through baseline study and included in the assessment of a particular environmental impact would not be representative.
- 1.3.3.3 Developments not meeting these inclusion criteria and/or not considered to have potential for cumulative effects have been screened out of the refined long list.
- 1.3.3.4 A process has been developed in order to methodically and transparently screen the projects, plans and activities that may be considered cumulatively alongside the Transmission Assets and produce a refined long list. The following factors have then been used to refine the long list to create a refined long list to be taken forward for each topic.

- Data confidence: data confidence has been taken into account when screening projects, plans and activities into or out of the CEA. The premise is that projects, plans and activities with a low level of detail publicly available cannot meaningfully contribute to a CEA and, as such, are screened out.
- Conceptual overlap: for a conceptual overlap to occur it must be established that an impact has the potential to directly or indirectly affect the same receptor(s) in question. In EIA terms this is described as an impact-receptor pathway and is defined here as a conceptual overlap.
- Physical overlap: a physical overlap refers to the potential for impacts arising from the Transmission Assets to overlap spatially with those from other projects, plans and activities on a receptor basis. This means that, in most examples, an overlap of the physical extent of the impacts arising from the two (or more) projects, plans or activities must be established for a cumulative effect to arise. Exceptions to this exist for certain mobile receptors.
- Temporal overlap: in order for a cumulative impact to arise from two or more projects, a temporal overlap of impacts arising from each must be established. It should be noted that some impacts are active only during certain phases of development, such as UXO clearance during site preparation. In these cases, it is important to establish the extent to which an overlap may occur between the specific phase of the Transmission Assets and other projects, plans or activities.
- 1.3.3.5 All developments that emit, avoid or sequester greenhouse gases (GHGs) have the potential to impact the atmospheric mass of GHGs as a receptor, and so may have a cumulative impact on climate change. Consequently, cumulative effects due to other specific local development projects were not individually considered for the climate change topic with the exception of the Generation Assets. They were however, taken into account when considering the impact of the Transmission Assets by defining the atmospheric mass of GHGs as a high sensitivity receptor in accordance with IEMA GHG Guidance (IEMA, 2022). Further information on the approach to CEA for climate change is presented in Volume 4, Chapter 1: Climate change of the ES.
- 1.3.3.6 The CEA for the human health topic was based on outputs from the other topic chapters. Therefore, projects were not screened specifically for that topic and do not appear as a separate column in the screening matrices below. Further information on the assessments relied upon for the human health CEA is presented in Volume 1, Annex 5.1: Human health assessment of the ES.

### 1.3.4 Stage 3 (information gathering) and Stage 4 (assessment)

1.3.4.1 A desk study search of the available environmental information available for each of the 'other developments' listed in the refined long list has been undertaken, which included searching on LPAs and the Planning Inspectorate websites.

1.3.4.2 The CEA assessments are provided in each of the technical chapters in Volume 2, Volume 3 and Volume 4 of the ES and utilise topic-specific criteria and rationales for individual assessments which are not repeated here. In order to focus the topic-specific CEAs presented in the ES chapters, the refined long list was subject to further topic-specific screening to identify those relevant projects plans within the ZOIs for each topic, as set out in **Table 1.1**. The justification for each topic-specific screening distance, used to refine the refined long list into topic-specific short lists is based on the potential for conceptual, physical and/or temporal overlaps, as well as with the application of professional judgement.

#### **Assessment with Generation Assets**

- 1.3.4.3 Section 5.4.9 of Volume 1, Chapter 5: Environmental assessment methodology of the ES sets out that for the Transmission Assets CEA, the other proposed major developments taken into account include:
  - the Morgan Offshore Wind Project: Generation Assets and the Morecambe Offshore Windfarm: Generation Assets ('the Generation Assets');
  - other Offshore Wind leasing Round 4 projects, including the Mona Offshore Wind Project; and
  - other relevant onshore and offshore developments identified through the process outlined above.
- 1.3.4.4 The CEA for the Transmission Assets draws on, and is informed by, the assessments set out in the ESs for the Generation Assets.
- 1.3.4.5 The following CEA scenarios have been considered, where relevant.
  - Scenario 1: Assessment of the Transmission Assets, together with the Morecambe Offshore Windfarm: Generation Assets.
  - Scenario 2: Assessment of the Transmission Assets, together with the Morgan Offshore Wind Project: Generation Assets.
  - Scenario 3: Assessment of the Transmission Assets, together with both the Morgan Offshore Wind Project: Generation Assets and Morecambe Offshore Windfarm: Generation Assets (the Generation Assets).
  - Scenario 4: Assessment of Scenario 3 and all other relevant projects and plans.
- 1.3.4.6 Scenario 4 includes the cumulative assessment scenario together with all other relevant screened-in projects from the cumulative effects assessment long list (see **Table 1.3**).
  - Scenario 4a: Scenario 3 (Transmission Assets and Generation Assets) and Tier 1 projects, plans and activities which are:
    - under construction;
    - permitted application;
    - submitted application; or

- those currently operational that were not operational when baseline data were collected, and/or those that are operational but have an ongoing impact.
- Scenario 4b: Scenario 4a plus Tier 2 projects, plans and activities for which a:
  - scoping report has been submitted in the public domain.
- Scenario 4c: Scenario 4b plus Tier 3 projects, plans and activities which are:
  - where a scoping report has not been submitted but some information is within the public domain;
  - identified in the relevant Development Plan; or
  - identified in other plans and programmes.

#### 1.4 Consultation

- 1.4.1.1 On 28 October 2022, the Applicants submitted a Scoping Report to the Planning Inspectorate, which described the scope and methodology for the technical studies being undertaken to provide an assessment of any likely significant effects for the construction, operation and maintenance, and decommissioning phases of the Transmission Assets. It also described those topics or sub-topics which are proposed to be scoped out of the EIA process and provided justification as to why the Transmission Assets would not have the potential to give rise to significant environmental effects in these areas.
- 1.4.1.2 Following consultation with the appropriate statutory bodies, the Planning Inspectorate (on behalf of the Secretary of State) provided a Scoping Opinion on 8 December 2022. Key comments raised during the scoping process specific to CEA are listed in **Table 1.4**, together with details of how these issues have been considered in the selection of CEA developments, plans and projects.
- 1.4.1.3 The preliminary findings of the EIA process were published in the PEIR in October 2023. The PEIR was prepared to provide the basis for formal consultation under the Planning Act 2008. This included consultation with statutory and non-statutory bodies under section 42 and 47 of the Planning Act 2008.
- 1.4.1.4 Consultation responses received as part of the section 42 and 47 process and how they are addressed within relevant to the CEA screening are provided in **Table 1.4**

Table 1.4: Summary of key consultation comments raised during consultation activities undertaken for the Transmission Assets relevant to the cumulative assessments

Date	Consultee and type of response		How and where considered in this annex?
8 December 2022	Planning Inspectorate	In light of the number of ongoing developments within the vicinity of	The potential cumulative impacts of the proposed development have been

Date	Consultee and type of response	Comment	How and where considered in this annex?
		the Proposed Development application site, the ES should clearly state which developments will be assumed to be part of the baseline and those which are to be considered as other development for the purposes of the cumulative effects assessment.	considered with the identified projects and plans as set out in this annex.  Topic specific assessment of the potential cumulative effects have been completed within the technical chapters and the results of this screening can be found in <b>Appendix A</b> : Offshore CEA long list and location map and
		Respondents to the Scoping Report have identified proposed developments or provided advice on the types of projects, plans, or activities that should be included (see Appendix 2 of the Scoping Opinion); these should be taken into account in the cumulative effects assessment. The Applicant should seek to agree the scope of the projects assessed with these consultation bodies.	Appendix B: Onshore CEA long list and location map.
November 2023	NRW Advisory (A) – Statutory Consultation	Hynet North West Carbon Capture	The Hynet CCS project has been included in the CEA long list and individually screened for each topic. The screening decisions can be found in the tables of <b>Appendix A</b> : Offshore CEA long list and location map and <b>Appendix B</b> : Onshore CEA long list and location map.
		NRW (A) noted that on the listed projects included for assessment of cumulative effects, the Isle of Man offshore wind farm Mooir Vannin is due to be constructed by 2030 so should also be included.	The Mooir Vannin Offshore Wind Farm and the Mooir Vannin - UK Transmission Assets have been included in the CEA long list and individually screened for each topic. The screening decisions can be found in the tables of <b>Appendix A</b> : Offshore CEA long list and location map and <b>Appendix B</b> : Onshore CEA long list and location map.
8 December 2022	MMO – scoping	The CEA should consider the cumulative effects of other projects on commercial fisheries.	The projects screened in to the CEA for the Commercial fisheries topic can be found in the tables of <b>Appendix A</b> : Offshore CEA long list and location map and <b>Appendix B</b> : Onshore CEA long list and location map.
8 December 2022	Blackpool Council	Consider cumulative effects of Enterprise Zone and Division Lane West access junction works on Common Edge Road.	A list of the projects in the CEA and their screening results with respect to highways and traffic is set out in <b>Appendix B</b> : Onshore CEA long list and location map of this annex
8 December 2022	Blackpool Council	Further consideration should be given on the potential impact upon	A list of projects considered in the CEA and the screening decisions of

Date	Consultee and type of response	Comment	How and where considered in this annex?						
		future development at the Enterprise Zone and Blackpool Airport.	individual topics can be found in <b>Appendix A</b> : Offshore CEA long list and location map and <b>Appendix B</b> : Onshore CEA long list and location map of this annex.						
8 December 2022	Historic England	Consideration should be given to other Irish Sea marine renewable energy generation infrastructure and other seabed development, inclusive of any electricity interconnectors and telecommunications cable circuits.	Marine projects/activities that could have a cumulative effect have been listed in <b>Appendix A</b> : Offshore CEA long list and location map						
8 December 2022	Isle of Man Government	Any significant risk of interference with marine navigation is of concern to the Territorial Sea Committee (TSC) with regard to transport to and from the island, and the shipping lanes in our territorial waters which are used to connect the UK and Ireland. The TSC is particularly concerned about the cumulative impacts from all of the proposed windfarms awarded as part of The Crown Estates Round 4 project and would want to see this fully taken into account as part of this EIA, should construction phases overlap with the other projects.	The Applicants have considered all Round 4 projects, and they are included in the CEA long list. The list and screening decisions for those projects can be found in the tables of <b>Appendix A</b> : Offshore CEA long list and location map and <b>Appendix B</b> : Onshore CEA long list and location map.						
8 December 2022	Isle of Man Government	The proposed offshore windfarm site and hydrocarbon block 112/25 should be included within any assessment for their cumulative impacts. The TSC anticipates significant impact on the Island's shipping routes due to all the proposed offshore windfarms and aims to ensure disruptions to commercial shipping services are minimal so as not affect the Island's economy.	The projects/activities that could have a cumulative effect have been listed in <b>Appendix A</b> : Offshore CEA long list and location map and <b>Appendix B</b> : Onshore CEA long list and location map along with the screening decisions against each project by the individual topics						
8 December 2022	Maritime and Coastguard Agency	Due to there being a significant amount of traffic in the development area, the project should assess the potential cumulative and combined effects on shipping routes, considering proximity to other windfarm developments, existing infrastructure, and its impact on safe navigable sea room.	The shipping and navigation screenin decisions for the projects listed in the CEA for can be found in <b>Appendix A</b> Offshore CEA long list and location m and <b>Appendix B</b> : Onshore CEA long list and location map.						

Date	Consultee and type of response	Comment	How and where considered in this annex?
8 December 2022	Natural England	The assessment of the proposed development must consider its potential cumulative effects, considering all supporting infrastructure and activities, along with other similar proposals. The ES should thoroughly evaluate the combined impact of the project with existing completed projects, approved but uncompleted projects, ongoing activities, projects under consideration by authorities, and reasonably foreseeable projects that may progress before the development's completion. The goal is to identify, describe, and assess the likely effects resulting from the project when considered in combination with these other activities.	The projects/activities that could have a cumulative effect have been listed in Appendix A: Offshore CEA long list and location map and Appendix B: Onshore CEA long list and location map along with the screening decisions against each project by the individual topics.
8 December 2022	Natural England	The assessment must consider the cumulative effect of the proposed development in conjunction with other relevant existing or proposed developments in the area on the overall landscape and seascape, keeping in mind the visual impact of the proposed development.	The projects/activities that could have a cumulative effect have been listed in <b>Appendix A</b> : Offshore CEA long list and location map and <b>Appendix B</b> : Onshore CEA long list and location map along with the screening decisions against each project by the individual topics.
November 2023	National Farmers Union (NFU) – Section 42 response	NFU would like the Operator to take into consideration the impact of construction on land which is in an agri-environmental scheme. If this land cannot be avoided early notice of any works will be required so as to avoid any breach of obligation. Cumulative Impact – The PEIR (Non-Technical Summary 6.2.4.1) mentions that an assessment of cumulative impacts has been undertaken. Section 8.7.6.1 highlights the potential for significant adverse cumulative effects with other projects in relation to permanent loss of best and most versatile land. The NFU would like further information as soon as possible for landowners affected with respect to the cumulative impact, so they can understand the overall impacts on their businesses. The project should explore options to work collaboratively with other infrastructure projects in the area	The projects/activities that could have a cumulative effect have been listed in Appendix A: Offshore CEA long list and location map and Appendix B: Onshore CEA long list and location map along with the screening decisions against each project by the individual topics.

Date	Consultee and type of response	Comment	How and where considered in this annex?
		to reduce the overall cumulative effect, especially the overall impact on agricultural land and operations.	
November 2023	Fylde Council, statutory consultation response	In addition to the cumulative impact of the infrastructure required to service the two wind farms, there are a number of development commitments in the locality of the proposed substation sites that need to be taken into consideration in an assessment of cumulative impact on the local community. There are several large scale solar farms which have been constructed recently or have planning permission and are awaiting project initiation. These facilities are generally located in the countryside and their impacts on the local landscape have been carefully assessed. The impact of further large scale utilities will add to that impact. It is considered that the assessment of the visual interrelationship of the proposed substation sites to these neighbouring facilities needs to be developed further.	The projects/activities that could have a cumulative effect have been listed in Appendix A: Offshore CEA long list and location map and Appendix B: Onshore CEA long list and location map along with the screening decisions against each project by the individual topics.

Preston & South Ribble Flood Risk Management Scheme - Phases 1 and 2	Coastal Developments	Tier 1	High – third party project details published in the public domain and confirmed as being accurate by the developer.	The main objective is to reduce the high level of flood risk to 4,778 properties (which includes 517 businesses) in Preston & South Ribble. The Scheme runs to the south of Preston City Centre, along a 4.5km stretch of the Ribble, extending upstream from Liverpool Road Bridge to Walton-Le-Dale. It also includes a 4km stretch of the Darwen from the confluence with the Ribble up to Higher Walton.	2.38										Operational	https://marinelicensing.marinemanag ement.org.uk/mmofox5/fox/live/MMO _PUBLIC_REGISTER/view- case?case_ref=MLA/2021/00353	d	f	f	a a	f	d	d	d d	la

Preston City Council	https://selfservi ce.preston.gov. uk/service/plan ning/Application View.aspx?App No=06/2021/14	1	Hybrid Planning Application comprising of: 1. Full planning application for erection of 26no. dwellings; and 2. Outline planning permission for residential development of up to 429no. dwellings seeking approval for access (all other matters reserved).	Tier 1	The application site forms part of the wider 'The Paddocks' residential development. This application comprises phase three of the development.  The full application proposes 42 no. dwellings. These include 2 4 bedroom houses and detached, semi-detached and mews house types. Elevations range from 2-2.5 storeys.  The outline application seeks approval for a residential development of up to 480 no. dwellings. Indicative plans indivate house types ranging from 1 to 5-bedroom properties.	3.35	19.44	16.98	3.35	6.04	3.93	Under construction	Yes	Yes	d (	i (	d	d	с	d	d	d c	i c	:	d
Preston City Council	https://selfservi ce.preston.gov. uk/service/plan ning/Application View.aspx?App No=06/2018/06 88	1	Erection of 22no. dwellings with access from Sandy Lane and 14no. dwellings with access from Maxy House Road 51no. dwellings and associated infrastructure	Tier 1	The application site forms part of the wider 'The Paddocks' residential development. This application is part of phase 1 of the development.  Proposed dwelings would be 2-2.5 storeys in height, and both detached and apartment buidings. There would be a range of dwelling sizes from 2-5 bedrooms. These dwellings are to be constructed in two parcels within the wider development. A parcel off Maxy House road will have 14no. dwellings, whilst a parcel off Sandy Lane will have 51no. dwellings. The 22no. dwellings approved in application 06/2018/0688 have been combined with 30no. dwellings approved in the application 06/2019/0688 of to create 51no. dwellings, approval for which is contained in application 06/2020/1197. Effectively, application 06/2020/1197 has partly replaced application 06/2020/18/0688 at the Sandy Lane but not the Maxy House Road parcel.  Application 06/2021/0169 applied for permission for two further dwellings in the Sandy Lane parcel, which was approved, to take the total dwellings in the Sandy Lane parcel to 53.  The rest of phase 1 of the development is operational.		20.32	17.82	2.96	6.74	3.45	Under construction	Yes	Yes	d	i	d	d	c	d	a	d c	i	:	d

South Ribble Borough Council	FUL   Erection of storage building with ancillary staff welfare facilities, office and compost bagging line following removal of 7 existing portacabins/shi pping containers together with the formation of ground mounted solar PV array   Farington Moss Recycling Centre Moss Lane Farington Moss Lancashire (southribble.go Y.uk)	i f	welfare facilities, office and compost bagging line following removal of 7 existing portacabins/shipping containers together with the formation of ground mounted solar PV array		Permission is sought to install a 49.05 kWp ground-mounted off-grid solar PV array. This will require 90 solar panels (30 rows of 3 panels in portrait) at 545 watts each and measure 34.77m wide and 4.175m high. It is intended that the panels will supply AC electricity via a 3 phase hybrid inverter to a 60 kWh battery storage system, which will then be able to power the site. This will help the site to move away from diesel generators and avoid circa 10 - 12,000 litres of diesel fuel per annum.  Permission is also sought to construct a 24.834 m (L) x 24.834 m (W) x 4.572 m (H) agricultural-style building on land within the existing site. This building will replace the need for 7no. porta-cabins/shipping containers and allow equipment to be stored undercover (including solar linked batteries and power room), provide improved staff welfare and office facilities (on a mezzanine) and also support the installation of a compost bagging line		22.90	20.57	3.25	10.06	2.45	Permitted	Yes	Yes	d	đ	d d	c	d			i d	c	d

Blackpool Council	23/0319   Scoping request for coastal works between North Pier and South Pier   PROMENADE BETWEEN NORTH AND SOUTH PIER, BLACKPOOL	832	Scoping request for coastal works between North Pier and South Pier	Tier 1	Blackpool Beach Management Outline Business Case (OBC) is being led by Blackpool Council to identify a solution to reduce the risk of coastal erosion along Blackpool Central Area  The Scheme is located along sub-unit B1.5 (Blackpool Central Area) in Lancashire, extending 3km between North Pier and South Pier.  Blackpool Beach Management OBC has identified the following potential preferred options: 100m long fishtail rock headlands/ groynes at 100m spacing to retain beach material and reduce the rate of beach lowering along the frontage. It is proposed that 10,000m3 of beach recharge (sand) is to be deposited on the upper beach (in the bays between the rock headlands/ groynes), every 10 years from year 10.	2.84	3.28	2.84	3.70	13.43	19.30	Pending	Yes	Yes d	C	d	d c	i c	d	d (	d	d c		ı

Lancashire County Council	https://planning egister.lancash re.gov.uk/Planr ing/Display/SC R/2023/0007	ni n	Screening Opinion for proposed new driving range, par 3 course and chipping area	Tier 1	The proposal is intended to reprofile and increase the overall levels in a disused area of the golf course to create a high quality driving range, chipping green, putting course and par 3 short game area. The scheme includes target greens, greens, tees and driving range teeing off point. As part of the scheme there is also new proposed native species tree planting and improvements to adjacent habitats. The scheme will include associated landscaping, water attenuation area and a new drainage system to combat the waterlogging issues that these areas currently encounter. There will be an opportunity for habitat creation as part of the scheme, in particular woodland planting The site area in question extends to approximately 14 hectares. The project would involve reforming of levels using imported inert material from the construction industry, top-soiling, seeding and the installation of land drains to form the suitable levels for the extended course. The depth of fill material would be maximum 5 metres at its highest and it is anticipated that it would be completed	8.88	10.25	8.88	9.10	12.68	18.02	Pending	Yes	Yes d		d	d (	d (	d	d	đ	d c

	https://pa.fylde. 877 gov.uk/Planning //Display/23/075 9	ERECTION OF TWO BUILDINGS TO PROVIDE A TOTAL OF 12 EMPLOYMENT UNITS FOR USE AS GENERAL INDUSTRY (B2) OR STORAGE AND DISTRIBUTION (CLASS B8), WITH ASSOCIATED VEHICULAR ACCESS FROM NAZE LANE EAST AND CAR PARKING ARRANGEMENTS.		The applicant seeks planning permission for the erection of two single storey buildings comprising 12 industrial units, to bused for purposes falling within Use Classes B1 and B2. It is intended that the proposed industrial units will function as starter units' for small businesses. The proposed buildings will measure 37.2 by 14.1m. They will have pitched roofs with a height of 4.9m to eaves and 6.9m to ridge. On its front elevation, the buildings will feature roller shutter doors and standard pedestrian doors; one of each to serve each unit, with fire doors to the rear. No other window and door openings are proposed apart from a series of polycarbonate roof lights. The buildings will be constructed in fire resistant composite sheets to have the appearance of typical industrial units while providing and an adequate level o safety.	e	13.33	10.87	1.74	2.07	6.12	Pending	Yes	Yes	d	d	d d	d	c	d	d	d c		2	d

## Table B.1: Onshore cumulative effects matrix - Spatial and Temporal

a	Included as part of the topic baseline and hence not considered within the cumulative impact assessment.
b	Part of the baseline but has an ongoing impact and is therefore considered relevant to the cumulative impact assessment: Screened in to assessment.
C	Potential cumulative impact exists: Screened in to assessment.
d	No conceptual or physical effect-receptor pathway: Screened out of assessment.
е	Low data confidence: Screened out of assessment.
f	No temporal overlap: Screened out of assessment.
g	Project has been withdrawn from development or operational
