APPENDIX A : M55 HEYHOUSES LINK ROAD ASSUMPTIONS	23
APPENDIX B : GROWTH RATES	24

Glossary

Term	Meaning
Annual Average Daily Traffic Flows	The total volume of vehicular traffic on a section of highway for a year divided by 365 days.
Growthed	The application of traffic growth rates to traffic flows
Heavy Vehicle	Any goods or passenger vehicle which has an operating weight exceeding 7.5 tonnes.

Acronyms

Acronym	Meaning
AADT	Annual Average Daily Traffic Flows
ATC	Automatic Traffic Counters
ES	Environmental Statement
HV	Heavy Vehicle

1 Base traffic flows

- 1.1.1.1 This annex presents a summary of the base traffic flows for the Morgan and Morecambe Offshore Wind Farms: Transmission Assets (referred to hereafter as the Transmission Assets) which have been used to define a baseline transport position as set out in Volume 3, Chapter 7: Traffic and transport of the Environmental Statement (ES).
- 1.1.1.2 The observed traffic survey and traffic flow data is set out in Volume 3, Annex 7.2: Traffic survey data of the ES. A summary of these base traffic flows is set out in **Table 1.1** and have been used to define a baseline transport position as set out in Volume 3, Chapter 7: Traffic and transport of the ES. Some of the observed traffic flows are dated 2019, however, a comparison of these with adjacent traffic surveys that are dated 2022 shows that these validate well against one-another and that those 2019 traffic flows remain up to date and representative of current traffic conditions.
- 1.1.1.3 As set out in section 7.6.4 of Volume 3, Chapter 7: Traffic and transport of the ES, some of the base traffic flows will be impacted by the opening of the M55 Heyhouses Link Road. Some of the base traffic flows set out in **Table 1.1** have therefore been adjusted as set out in section 7.6.4 of Volume 3, Chapter 7: Traffic and transport of the ES. Details of these adjustments are set out in **Appendix A** and the resultant base traffic flows are summarised in **Table 1.2**.
- 1.1.1.4 **Figure 1.1** of this annex presents the location of the highway link references listed in **Table 1.1**, **Table 1.2**, **Table 1.3**, **Table 1.4** and **Table 1.5**.
- 1.1.1.5 Traffic growth rates obtained from TEMPro have been applied to the base traffic flows to determine 2027 future year traffic flows, presented in **Table 1.1**. Details of the growth rates are attached at **Appendix B** and the 2027 growthed traffic flows are set out in **Table 1.3**. Committed development traffic flows are set out in **Table 1.4** and described in further detailed within section 7.6.6 of Volume 3, Chapter 7: Traffic and transport of the ES.
- 1.1.1.6 A future year baseline of 2027 has been calculated as this is the year in which the peak daily construction traffic flows of the Transmission Assets would be generated.
- 1.1.1.7 The 2027 baseline traffic flows are set out in **Table 1.5** and define a baseline transport position using the base traffic flows (with appropriate adjustments for the M55 Henhouses Link Road) growthed to 2027 plus the addition of the committed development traffic flows.
- 1.1.1.8 The base peak hour traffic flows used to assess driver delay within section 7.11.3 of Volume 3, Chapter 7: Traffic and transport of the ES are derived directly from the traffic survey data contained in Appendix F of Volume 3, Annex 7.2: Traffic survey data of the ES and are summarised in section 7.11.3 of Volume 3, Chapter 7: Traffic and transport of the ES.

Notes on assumptions and calculations

- Information and data for adjustments to observed or base traffic flows have been taken from The traffic Modelling and Economic Appraisal Report.
- Figure 4.1 of the modelling report presents the routes that will be affected by the M55 Heyhouses Link Road. This covers routes 1, 2, and 3, the links that have been adjusted are those that are covered by the routes presented on this figure.
- Initially for the three main routes we have taken the 2019 with and without scheme scenario from Figure 4.3 and Figure 4.4 of the modelling report and calculated the change in traffic flows.
- For Queensway (route 1, link 20a and 20b), the modelling report sets out that modelled flows are only 30% of affected flows as this does not include Blackpool traffic. Therefore the without scheme scenario has been divided by 0.30 to get 100% of flows. The change in traffic flows has then been calculated.
- The percentage change from the without scheme to with scheme has then been calculated for the three main routes.
- For links 20a, 20b, 24, 28, 30, 31a and 31b the total vehicles and HV base AADT has been taken from observed data. For links 20a, 20b, 31a, and 31b, the percentage change has been applied to the total vehicles AADT.
- For link 24 (B5261 Blackpool Road) based on the routing figure (Figure 4.1) from the modelling report it is presented that route 1 does not use link 24 and the only change to link 24 is the addition of Peel Road (L30) traffic flows. Similarly link 28 (B5410 Lytham St Annes) route 1 is already using L28 therefore the only change to L28 is the addition of Peel Road (L30) traffic flows.
- For link 31 (Ballam Road), the modelling report change in traffic flows is based on Peel Road as set out in the modelling report (figure 4.3 and 4.4) therefore the change of traffic flows for Peel Road has been applied to link 31 (Ballam Road).
- For links 25 (B5410) and 26 (B5410), the total vehicles base traffic flow is taken from the without 2019 scenario flows, as the modelling report provides the traffic flows for the AM and PM peak hour only, a rate has been calculated from surrounding links from traffic survey data to apply to the AM and PM peak hour flows from the modelling report to create an AADT. The rate from Peel Road has been used which is 5.52.
- To calculate the change of total vehicles traffic flows for links 25 (B5410) and 26 (B5410) the change in total vehicles traffic flows from Peel Road and Queensway have been applied to this as these are the movements that will route along the updated M55 link road. This has then created a base total vehicles AADT.
- For HVs, the HV percentage from the observed traffic flows has been applied to the updated total vehicles AADT. For links 25 and 26 the HV percentage from the base traffic flows for L24 (Blackpool Road B5261) has been applied to the total vehicles AADT.
