Dear Mr. P Hudson

I enclose a copy of a letter received from Halito Energy Group dated 17th Sept 2012, after a meeting with Halito, held at above address on 30th Aug 2012.

I refer mainly to page 2 regarding screening of new access roads which runs off the back of my property, the road being 100m from our property for approx 3/4 of a mile, at closest point away.

Halito states that the funding and screening will all be carried out when the road is constructed if a 50% grant is granted for the project, could this condition of the planning be made of has the above work would not carried out at the time promised by Halito Energy, many thanks and look forward to an early reply.

Yours faithfully,

[Signature]
10th September 2012

Mr K Penswick

Dear Mr Penswick

This letter is to confirm the discussion that took place at [redacted] on the 30th August 2012 in an attempt to answer the questions in your letter to Mr Budinger dated the 8th August 2012.

**BW 45 Field and Hedgerows**
Halite has been working with the EA and the agreement reached is that the heavily contaminated material will be disposed of using a waste disposal company and the remainder will be spread over the field to restore it to normal.

Halite will work with Mr Whitlow through this process which will be carried out in September.

Hedgerows and trees will be replaced by a local landscape contractor and this will be carried out in October.

**Road Surface**
As we discussed the road will have to be returned to its former condition by the local authority so as suggested you should write to them explaining the situation.

/continued...
Screening of the new access road
The bunding and screening of the new road will take place after the construction of the road and not after the construction of the project.

Brinewell monitoring
As I explained we now monitor every brinewell at the underneath of the flange and other monitoring points every 4-6 months. Certain brinewells that may be of more concern we monitor more frequently. This information is given to the geologist at Mott Macdonald who tracks the changes and informs Halite if any action needs to be taken.

Halite is still working with the HSE and EA on a no risk solution for removing the air pockets in some of the brinewells. On several of the brinewells the brine under pressure has been drained into containers to allow further testing to take place. The containers are presently stored at the Heads.

The other issues discussed i.e. the drainage ditch outside of your home and the condition of Corcas Lane will be followed up on.

I trust the information contained in this letter answers your queries, however, please do not hesitate to let me know if I can be of any further assistance.

Kind regards.

Yours sincerely

[Redacted]
BRIAN STANLEY
Safety and Risk Director
Halite Energy Group Limited
