Subject: Carbon capture

[You don't often get email from [REDACTED]. Learn why this is important at [REDACTED]]

Dear sirs, I have contacted you before regarding this.

I attended 2 open day meetings with Harbour energy, we were told a new pipeline was needed for the waste product produced by the manufacture of blue hydrogen. This was obviously a lie.

Hydrogen was to be made from gas, then turned into electricity.

A great chance of leakage a pipe only 1.2 meters deep, a trench depth of 1.8 metres. Should a leakage occur it will kill everything within a five mile radius.

Our King payed us a visit in Theddlethorpe and granted the site a place of natural beauty !!!!how can this be with new buildings to drive the carbon waste under the sea, no doubt it will be driven by diesel.

What a total waste of money and time, why the hell don't you leave us alone.
