

Interested Party Reference number: VNZP-AFP174

I'm writing this on behalf of my father David House who is a landowner and partner in Swallow Park. I'm Alice House also a partner in Swallow Park therefore also has an interest in this matter.

My email is [REDACTED]@swallowpark.co.uk

We object to the plan for several reasons:

It fails to address the root cause of carbon emissions stemming from environmentally harmful practices such as oil and gas extraction. There are concerns that CCS may serve as a justification for perpetuating destructive fossil fuel production.

The potential unforeseen circumstances stemming from the extensive geological storage of CO<sub>2</sub> – including the possibility of CO<sub>2</sub> seepage back into the atmosphere. Recent studies have emphasized that the geological challenges associated with the prolonged storage of CO<sub>2</sub> may have been previously underestimated.

There are potential dangers associated with the transportation and storage of CO<sub>2</sub>. CO<sub>2</sub> is an asphyxiant in high concentrations; leaks from pipelines could lead to catastrophic outcomes.

How will this affect my business/livelihood/family's land:

- As a partner in Swallow Park Caravan Site, how will this plan exactly affect the shower block next to the road/entrance at Bleak House Farm? If we incur financial losses, then compensation will be required.
- There is an unwarranted suggestion to expand the entrance to the farmyard of Bleak House Farm. The roads and surrounding land leading to the gas chambers are no longer capable of accommodating heavy traffic. This needs to be discussed.
- The land is a nature conservation area, which has taken 20 years to develop. The land is home to many protected birds and wildlife. Any work completed on this land will patently disturb this wildlife.
