- Proposed Development Site - 250 m Buffer
- Main Site

Natural Ground Subsidence - Compressible Deposits

- Compressible Strata Are Not Thought To Occur.
- Compressibility And Uneven Settlement Problems Are Not Likely To Be Significant On The Site For Most Land Uses.
- Compressibility And Uneven Settlement Hazards Are Probably Present. Land Use Should Consider Specifically The Compressibility And Variability Of The Site.
- Highly Compressible Strata Present. Significant Constraint On Land Use Depending On Thickness.

Groundsure search area is based on the Red Line Boundary available at the time of the data purchase (March 2023).
