A38 Derby Junctions – TR010022 (“the Scheme”)

Planning Act 2008

Infrastructure Planning (Examination Procedure) Rules 2010

Markeaton Service Station, A38 Derby, DE24 4AA (the Service Station)

Further Supplementary Statement by Tim Hancock, B.Sc., FRICS, MEI

Relating to the effect of the Scheme in Reducing the Ability of the Service Station to Satisfy the Needs of Motorists using the A38 and A52 and the Benefits of Providing Advance Warning Signs as Part of the Scheme

On behalf of Euro Garages Limited

June 2020
1.0 Markeaton Service Area – Background

1.1 In December 2019, I produced a statement relating to the potential adverse effects of the Scheme on Markeaton Service Station, which together with the adjoining McDonalds Restaurant forms a service area (“the Service Area”), currently providing roadside facilities for the motorist using the A38 and A52 strategic roads.

1.2 On 17th February 2020 I produced a supplementary statement relating to the need for the provision of advance warning signs to provide for the safety and welfare of passing motorists and support the trading potential of the Service Area following completion of the Scheme.

1.3 The parties have held ongoing technical discussions relating to this and other matters to clarify the detailed effects of the Scheme.

1.4 One key outstanding matter relates to the provision of Advance Warning Signs within the approaching highway, as part of the Scheme to mitigate the adverse effects of the Scheme for the motorist and Euro Garages Limited. Despite considerable discussion no substantive response has been received to my supplementary statement.

1.5 As I have noted previously, I think it possible that there is a concern by Highways England as to whether the Service Area complies with all of the requirements set out within the relevant policy for Trunk Road Service Areas. This policy is set out in Circular 2/2013. In particular, and as noted previously, the Service Area does not provide parking for HGVs or coaches although refuelling facilities for HGVs are available.

1.6 My experience however is that many roadside facilities adjoining trunk roads and serving motorists using these roads benefit from advance warning signs even though they do not
provide the full range of such facilities and might not be considered by Highways England to be formally designated as Trunk Road Service Areas.

1.7 In my previous statement dated 17th February 2020, I set out full details of the role played by the Service Area in providing facilities for the motorist using the A38 and A52 roads. These roads are part of the strategic road network.

1.8 In my previous statement dated 17th February 2020, I also set out examples of roadside facilities that have the benefit of advance warning signs notwithstanding the fact that these sites do not have all of the facilities set out within Circular 2/2013. I have been requested to provide more detailed particulars of one of the facilities to which I referred, Braintree Services on the A120 trunk road.

2.0 Examples of Signed Sites not meeting Circular 2/2013 Requirements

2.1 In this report I provide details of the signed Braintree Service in an Appendix. This relatively new facility was provided with signage from the A120 when constructed. It has no HGV or coach parking facilities or space to accommodate these facilities but provides effective and important provision for the substantial majority of the passing traffic. The site is highly successful and has a busy HGV forecourt.

2.2 It is well established that there is widespread signing from trunk roads of roadside facilities that do not meet all the requirements of Circular 2/2013. Generally, this is due to the lack of space to allow facilities for all categories of vehicles or because the passing traffic volume of certain categories of traffic is too low to justify provision.

2.3 I have included in the attached Appendix, by way of further illustration, three additional examples from just two trunk roads, giving, with Braintree Services a total of four sites, two on the A120 and two on the A12. None has parking for HGVs or coaches. All have the benefit of advance warning signs.
2.4 Colchester Services is a relatively new facility on the A12. This is another new facility providing important provision. It is highly successful. It has no HGV or coach parking facilities but provides for the substantial majority of the passing traffic. The site has a busy HGV forecourt.

2.5 Stansted Services are a relatively modern facility on the A120. This is another new facility providing important provision. It has no HGV or coach parking facilities but provides facilities for the substantial majority of the passing traffic. The site has a busy HGV forecourt.

2.6 Brentwood Services are located on the A12. They were redeveloped some 20 years ago and have no HGV forecourt or parking. The site was redeveloped some 21 years ago. The site has the benefit of advance warning signs and is a very busy location. The signs confirm that no HGV facilities area available.

2.7 I was involved in the acquisition and development of all of these facilities and in all cases the case for signage was readily accepted. The needs of the motorist were evidently considered to be of paramount importance.

3.0 Conclusions

3.1 It is not necessary for me to restate my previous conclusions, as set out in my earlier statement dated 17th February 2020 but I confirm that they are unaltered.

3.2 The evidence provided clearly demonstrates that whilst the policy requirements are a reasonable aspiration, Highway England has regularly accepted that welfare and safety considerations are of overriding importance.

3.3 I consider that it would be possible for me to add to this evidence by citing many and further examples throughout England and Wales in any further proceedings. Policy should be applied equitably and consistently, and it is reasonable for Euro Garages to insist that this be the case here.
3.4 In my opinion the case for providing signage to allow this existing facility to serve the “needs” of the passing motorist in the interest of welfare and road safety is compelling and signage should be provided.

This concludes my Further Statement.

COMMENTS

Travelling west, there is no exit services sign or AWS sign on the exit slip at King William Interchange; the motorist must pass the site and take the Chelmsford signed exit slip where there is a services sign. It is nevertheless very easy to miss this slip road given confusion with the King William Interchange exit slip a very short distance before the services exit slip.

Note from first photo that driver came off before the dedicated Chelmsford bound/services slip a little further on highlighting the confusion at this service site location.
