HIA Annex 2.1 – Inventory with summary descriptions of Asset Groups that convey the Attributes of the OUV of the WHS

Asset Group Number	Easting	Northing	Asset Group Name	NHLE reference	HER reference	Description	Period	Location	Condition of monuments with surviving above-ground earthworks <sup>1</sup> .
AG06	408787	144940	Net Down Barrow Cemetery	N/A	MWI6749; MWI6777; MWI6941; MWI7011; MWI7012; MWI7013; MWI7014; MWI7015; MWI7016; MWI7017; MWI7018; MWI7019; MWI7020; MWI7021; MWI7022; MWI7023; MWI7024; MWI7025; MWI7026; MWI7026; MWI7092; MWI7189	<p>A group of perhaps as many as 19 non-designated levelled round barrows on Net Down, ten of which were excavated under the direction of Charles Green between 1958-60 (Green and Rollo-Smith 1984). These are predominantly clustered together in a roughly linear arrangement or cemetery, located outside of the north-western corner of the WHS, immediately to the north of The Packway and to the west of the Rollestone grain store.</p> <p>The Net Down group is unusual amongst the various barrow cemeteries within the landscape surrounding Stonehenge in having been extensively excavated and subject to detailed recording in modern times. Most of the barrows within the Asset Group seem to have been initially identified from aerial photographs, having apparently been levelled by ploughing by the time of Charles Green's excavations.</p> <p>Green's excavations indicated that the barrow cemetery originated with several inhumation burials of the Beaker tradition, which were interred at the end of the Late Neolithic and the start of the Early Bronze Age. These were followed by the interment of numerous Early to Middle Bronze Age inhumation and cremation burials, with cremation becoming the 'principal treatment of the dead' at this time (Lawson 2007 p.375). Quantities of later Bronze Age, Iron Age and Roman pottery from the fills of the excavated barrow ditches, and spatial associations with several ditches and gullies were also interpreted as evidence that the barrows, which were presumably still prominent features in the landscape, influenced the laying out of subsequent field systems and/ or stock enclosures by the end of the first century (Green and Rollo-Smith 1984, p. 315). The barrows seem to have continued to be used as a place of burial after the tradition of constructing and elaborating the monuments had ceased, possibly into the Iron Age or Saxon period, when two further interments (in a single grave) were inserted into one of the mounds</p> <p>Traces of in-situ burning and / or layers of ash and charcoal were found in several of the barrows, and in some cases interpreted as the vestiges of cremation pyres (e.g. Shrewton 5h and 5l). In terms of the morphology of the barrows, these were interpreted as being of either the 'bell', or 'bowl' type, with one example of the 'disc' type represented amongst the group. Evidence for sequential phases of construction or elaboration were also noted in several of the excavated examples. Empty pits and stakeholes provided some indication of activity prior to the construction of the barrow mounds in a number of cases.</p>	Bronze Age, Undated & Late Prehistoric (barrows); Iron Age and Roman (associated finds)	Outside WHS boundary	(Poor)
AG08	409236	142905	Winterbourne Stoke Down Barrows	1015021, 1015022, 1015024, 1015217	MWI7054, MWI7090, MWI73342	<p>The Asset Group includes four scheduled monuments. These are an Early Neolithic long barrow (NHLE 1015021) and three later round barrows (NHLE 1015022, 1015024, 1015217). In addition, the Asset Group contains several known and possible non-designated, levelled round barrows, which have largely been identified from aerial photographs (e.g. MWI7090, MWI73342). The monuments are dispersed across Winterbourne Stoke Down, to the north and south of the A360, west of Airman's Corner and outside of the western boundary of the WHS.</p> <p>The earliest component of the Asset Group is the scheduled long barrow (NHLE 1015021), also known as 'Winterbourne Stoke 53', which is situated within the southwestern part of the Asset Group, to the south of the A360. Though partially levelled/reduced in height at one end, the remainder of the mound survives as a prominent earthwork. The long barrow was partially excavated in the early 19th century by Sir Richard Colt Hoare and William Cunnington, who appear to have discovered a cremation burial covered with flints, along with indications of intense, in situ burning and two deep cists containing wood ash and charcoal (Cunnington 1914 p.407).</p> <p>The remaining components of the Asset Group are all later round barrows. In contrast to the Winterbourne Stoke 53 long barrow, the earthwork elements of the round barrows have been either levelled, or substantially reduced in height. However, the scheduled examples retain some surface expression as very low, spread mounds. Two examples in the northern part of the Asset Group, to the north of the A360, were partially excavated during the 20th century. The first of these is the scheduled example, also known as 'Winterbourne Stoke 44' (NHLE 1015217), which was excavated in 1959 (Green and Rollo-Smith 1984). Though recorded by the NHLE as being a relatively common 'bowl' type, Green and Rollo Smith (1984) described it as a 'bell' type barrow, also noting parallels with other monuments described as 'hengi-form' types. The excavation uncovered a cremation burial covered by a flint cairn, and a pit containing a partial sheep skeleton of uncertain date, both of which were found beneath the remnant mound. The other barrow, known as 'Winterbourne Stoke 43' was partially excavated in 1960. The investigations demonstrated that it was formed of a mound, encircled by two concentric ditches, the outermost of which had been re-cut (Ozanne 1972). A series of intercut pits, or graves was found within the centre of the monument. Though disturbed by antiquarian investigations,</p>	Neolithic, Bronze Age	Outside WHS boundary	(Fair, poor)

<sup>1</sup> Wessex Archaeology 2012 Condition Survey data; ratings in brackets derive from 2017-2018 site visits undertaken to inform this HIA.

Asset Group Number	Easting	Northing	Asset Group Name	NHLE reference	HER reference	Description	Period	Location	Condition of monuments with surviving above-ground earthworks <sup>1</sup> .
						the earliest burial appeared to be an inhumation accompanied by a Beaker. A secondary cremation burial was subsequently inserted into the barrow, and the remains of at least two other individuals were also found in the backfill of the antiquarian's exploratory excavation. As the other round barrows assigned to this Asset Group have largely been recorded from aerial photographs and surface inspection, relatively little is known about them, excepting some broad indications as to their form / morphology.			
AG10	409984	144371	Rollestone Barrows	1009058, 1009124, 1009129, 1010886, 1010887, 1010888, 1010889, 1010890, 1010891, 1010892, 1010904, 1010905, 1012166, 1012168, 1012169, 1012170, 1013758	MWI6389, MWI7027, MWI7028, MWI7029, MWI7030, MWI7031, MWI7032, MWI7033, MWI7034, MWI7035, MWI7036, MWI7037, MWI7038, MWI7039, MWI7040, MWI7041, MWI7042, MWI7043, MWI7049, MWI7050, MWI7117, MWI7139, MWI7140, MWI7183, MWI7184, MWI7185, MWI7186, MWI7187, MWI12633, MWI12634, MWI12635, MWI12636, MWI12637, MWI12638, MWI12639, MWI12640, MWI12641, MWI12642, MWI12667, MWI12668, MWI12669, MWI12670, MWI12671, MWI12672, MWI12673, MWI12674, MWI12675, MWI12676, MWI12681, MWI12682, MWI12683, MWI12729, MWI73484	The Asset Group consists of numerous Late Neolithic - Bronze Age round barrows of various forms, located at the junction of The Packway and the B3086, known as Rollestone Corner, and partially within the northwestern boundary of the WHS. It includes 17 Scheduled Monuments which include 39 individual monuments, as well as several non-designated examples. It includes several which are classified as being of the more common 'bowl' type, as well as examples of the more elaborate and unusual 'bell', 'disc', 'pond' and 'saucer' sub-types. However, the exact number and morphologies of the barrows in this area is unclear. The monuments are dispersed across a relatively large area. They include a linear grouping on Rollestone Field and another cluster of round barrows further to the east, which is often referred to as the Ammunition Dump Group (e.g. Lawson 2007, p.370-1), as well as several other smaller discrete groups and isolated examples. Few of these monuments retain any prominent surface expression due to early military activity and ploughing, although the substantial 'bell' barrow known as Winterbourne Stoke 48 (part of NHLE 1012170) is a notable exception. Several appear to have been partially excavated by antiquarians, particularly William Cunnington. Some of the round barrows within the Asset Group were also partially excavated during the 20th century. Between 1958-60 Charles Green directed excavations of five of the barrows forming part of the Rollestone Field Group within Shrewton parish (Green and Rollo-Smith 1984; Shrewton 23, 24, 25, 28 & 29). Green's excavations demonstrated that the sequence of burials began with inhumations belonging to the Beaker tradition, with cremation being more prevalent amongst subsequent (Early-Middle Bronze Age) burials, both primary and secondary. Four of the barrows in Winterbourne Stoke parish, forming part of the Ammunition Dump Group, were excavated by Faith and Lance Vatcher in 1961 (Gingell 1988; Winterbourne Stoke 46, 47, 49 and 50). Durrington 3 (MWI12570), one of the non-designated barrows on the eastern edge of the Ammunition Dump Group, was also subject to salvage excavations in 1992 (Allen et al ND). Finally, an isolated bowl barrow situated between the main Ammunition Dump Group and the Rollestone Field linear group, known as Winterbourne Stoke 45 (NHLE 1010905), was excavated by Patricia M Christie in 1964 (Christie 1970).	Late Neolithic, Bronze Age	Partially outside WHS boundary	Poor
AG11	410071	143285	Lesser Cursus Barrows and Pit Circle	1008951, 1008952, 1010893, 1010894, 1010897, 1010898, 1010899, 1010900, 1010901, 1010902, 1010903	MWI7044, MWI7051, MWI7048, MWI12800, MWI12801, MWI12802, MWI12803, MWI12804, MWI12805, MWI12806, MWI12807, MWI12808, MWI74693	The Asset Group consists of a group of Late Neolithic-Bronze Age monuments located north of Airman's Corner on Winterbourne Stoke Down, and to the west and south-west of the Lesser Cursus (AG 15). It includes 11 Scheduled Monuments, which include 14 individual barrows of various forms. In addition, the Asset Group includes a non-designated pit circle (MWI74693), interpreted as a possible timber post circle or large post-built structure, which was detected by geophysical survey carried out in association with the development of new Stonehenge Visitors Centre (Wessex Archaeology 2009; 'Anomaly 4001'). The majority of the monuments form a linear arrangement extending in an arc to the west-southwest of the western terminal of the Early Neolithic Lesser Cursus, which appears to have formed the focus for the development of the group. The remainder are outliers located to the south of the linear group. The barrows are sometimes referred to as the 'Silo Group' (e.g. Lawson 2007), after the prominent agricultural silo which is situated amongst them. The earthwork components of several of the monuments within this group appear to have either been levelled, or substantially reduced in height, whilst others may simply never have been especially prominent above ground. Some retain prominent earthwork mounds, particularly the two 'bell' barrows known as Winterbourne Stoke 37 and 40 (NHLE 1010899 and 1008952), and the 'bowl' barrows known as Winterbourne Stoke 36 and 42 (NHLE 1010900 and 1008951). Several of the barrows within this group were partially excavated in the 19th century by Sir Richard Colt Hoare and William Cunnington, and later by John Thurnam. Four of the monuments assigned to this Asset Group were also excavated in 1961 by F.de M. and H.L. Vatcher on behalf of the Ministry of Works (as detailed in Gingell, 1988). These excavations uncovered several inhumation and cremation burials, the earliest of which may date to the Neolithic, as well as evidence for the sequential development and morphologies of the monuments. Subsequent investigations of these monuments have been limited to the application of non-intrusive techniques.	Neolithic, Bronze Age	Within WHS boundary (except Pit Circle 'Anomaly 4001', and NHLE 1008951 / MWI7044)	Fair, poor
AG12	410112	141856	Winterbourne Stoke Crossroads	1011841; 1012368; 1012382;	MWI12453; MWI12459; MWI12485; MWI12500; MWI12543; MWI12615; MWI12623; MWI12677; MWI12678;	The Winterbourne Stoke crossroads cemetery contains 22 round barrows, including 14 bowl barrows, three bell barrows, two disc barrows, two pond barrows and a saucer barrow on a broad northeast – southwest alignment.	Neolithic, Bronze Age	Partially outside	Fair

			<b>Barrows</b>	1011047; 1011842; 1011843	MWI12978; MWI7121; MWI12485; MWI12677; MWI12747; MWI12877; MWI12981; MWI12982; MWI12983; MWI12984; MWI12985; MWI12986; MWI12987; MWI12988; MWI12989; MWI12990; MWI12991; MWI12992; MWI12993; MWI12994; MWI12995; MWI12996; MWI12997; MWI7079; MWI7080; MWI7081; MWI7082; MWI7083; MWI7084; MWI7085; MWI7086; MWI7087	The focal point and origin of the cemetery is a long barrow situated 100 m to the southwest of the monument, its long axis orientated along the ridge on which the cemetery later developed. Five bowl barrows and two saucer barrows forming a discrete barrow cemetery just to the north of the crossroads group with a further small cluster of four bowl barrows seen to the east. Several more scattered barrows lie to the north on a broad east – west alignment while to the southwest is a single barrow and the prehistoric enclosure.			
<b>AG13</b>	410385	140893	<b>The Diamond Group</b>	1011045, 1011046, 1010830, 1010834, 1010837, 1011708, 1021349	MWI6398, MWI12486, MWI12666, MWI12760, MWI12783, MWI12970, MWI12971, MWI12972, MWI12973, MWI12974, MWI12975, MWI12976, MWI12977, MWI13131, MWI13135, MWI13159, MWI73294, MWI75694, MWI75695; MWI74641	<p>The Asset Group consists of a nucleated group of seven bowl barrows and a pond barrow, three outlying bowl barrows, three long barrows, a possible henge and a hengi-form feature. The majority of these features are scheduled, although two of the long barrows are non-designated. A scheduled linear boundary of likely Middle Bronze Age date bisects the group from the northwest – southeast, and an additional section of linear earthwork lies to the east of this.</p> <p>The round barrows have all suffered truncation due to ploughing, although recent geophysical survey of the nucleated cemetery has confirmed the survival of the known barrows and indicates a number of further potential monuments as well as possible associated settlement activity to the south (MWI74632; Linford et al. 2015).</p> <p>The scheduled long barrow was partially excavated in 1866 by John Thurnam but was later described by William Cunnington to be ‘in excellent preservation’. The two non-designated long barrows have been identified by geophysical survey (Wessex Archaeology 2016; Linford et al 2015); and subsequently targeted by recent evaluation / small scale excavation, which also identified Late Neolithic/Early Bronze Age features (Wessex Archaeology 2017; Roberts et al 2012).</p> <p>The possible henge monument was identified from aerial photographs, and detected via geophysical survey in 1992 (GSB 1992). More recent geophysical survey has confirmed the earlier survey results (Linford et al. 2015), although the interpretation of this feature has been called into question; it has been suggested to be a possible round barrow or recent military feature. The small hengi-form feature has been identified through geophysical survey and evaluation (Wessex Archaeology 2016; 2017). An outlying barrow to the west of the A360 has also been confirmed by geophysical survey to incorporate a segmented ring ditch (Wessex Archaeology 2016). Limited evaluation of the scheduled linear boundary demonstrated that it is a substantial feature, although no dating evidence was obtained (Wessex Archaeology 2002).</p>	Neolithic, Bronze Age	Within WHS boundary (except NHLE 1011045 / MWI6398)  Also Pit UID 2080 / MWI2086?	Good
<b>AG14</b>	410422	145985	<b>Robin Hood's Ball and Associated Sites</b>	1009060, 1009061, 1009511, 1009515, 1009569, 1009593, 1009597, 1009599, 1009600 (1010091)		<p>A group of prehistoric monuments located outside of the boundary of the WHS, and within the Salisbury Plain Training Area to the northwest of Larkhill Camp. It includes nine Scheduled Monuments. These comprise: the Early Neolithic causewayed enclosure known as Robin Hood's Ball (NHLE 1009593); an Early Neolithic long barrow (NHLE 1009600); seven later round barrows (NHLE 1009515, 1009569, 1009597, 1009599-61); and, an undated earthwork enclosure (NHLE 1009511). The Robin Hood's Ball causewayed enclosure is amongst the earliest monumental constructions within the Stonehenge landscape. It is defined by two concentric circuits of banks and segmented or causewayed ditches, enclosing a slightly irregular area of c.3.5ha. The earthwork remains are not especially prominent when viewed from ground level, although they are more conspicuous on aerial photographs. The site has been subject to small-scale excavations on two occasions; in the 1950's (Thomas 1964) and in 1983-4 (Richards 1990). A detailed analytical earthwork survey of the site was conducted in the 1990s (Oswald et al. 2001), and a geophysical survey was undertaken in 2015 (Bayer 2016). Although subject to only limited excavation, the quantities of ‘cultural debris’ recovered from Robin Hood's Ball has been seen as ‘sufficient to imply a significant focus of occupation, whether periodic or on a more permanent basis in the centuries following 3700 BC’ (Darvill 2006 p.79). Robin Hood's Ball was long thought to be the only causewayed enclosure within the Stonehenge landscape. However, part of a second causewayed enclosure was unexpectedly revealed to the east of Larkhill Camp in early 2017 (Field and McOmish 2017 p. 56).</p> <p>The long barrow, which is broadly contemporary with the causewayed enclosure, is one of several on Alton Down, to the north of the WHS boundary and east of Robin Hood's Ball. Partial excavation by John Thurnam in the 19th century appears to have revealed a secondary inhumation burial associated with Beaker pottery. Several of the round barrows within this group were also partially excavated in the 19th century.</p> <p>The precise date and function of the scheduled earthwork enclosure is uncertain, as the site is not known to have been subject to any intrusive archaeological investigation, though it may be of Later Prehistoric or Roman date.</p>	Neolithic, Bronze Age	Outside WHS boundary	(Fair)

Asset Group Number	Easting	Northing	Asset Group Name	NHLE reference	HER reference	Description	Period	Location	Condition of monuments with surviving above-ground earthworks <sup>1</sup> .
AG15	410547	143494	The Lesser Cursus	1010901	MW112436, MW112761	<p>The Asset Group covers the Early Neolithic Lesser Cursus (NHLE 1010901), which lies within the WHS, some 600m to the northwest of the western terminal of the much larger, but broadly contemporary Greater Cursus.</p> <p>The Lesser Cursus exhibits little surface expression, having been levelled by ploughing by the mid-20th century, if not considerably earlier than this. Excavations in 1983 demonstrated that the monument was constructed in at least two phases (Richards 1990 p72-93). The first phase consisted of an insubstantial, slightly trapezoidal enclosure formed by a bank and external ditch, measuring some 200m by 60m. The second phase of construction entailed the enlargement of the earthworks and the creation of an open ended extension, elongated the enclosure eastwards by approximately 200m. The absence of the ditch at the eastern end has given rise to the suggestion that the cursus was unfinished; Field and McOmish (2017 p60) have also noted that 'Like some mortuary enclosures, the Lesser Cursus to the north-west of Stonehenge is open at one end but with a cross division too, and it may be that further elongation was planned for it'. Lawson (2007 p.71) has also remarked on the morphological similarity of the Lesser Cursus and smaller 'long mortuary enclosures'.</p> <p>Radiocarbon dates obtained from antlers at the bases of the ditches suggest that both phases of construction took place at around the same time. There are indications that the ditches may have been deliberately infilled soon after completion (Cleal et al 1995 p481). However, the excavations in 1983 also identified evidence of subsequent, Bronze Age activity in the immediate environs of the Lesser Cursus (Richards 1990 p.81-2 &amp; 198).</p> <p>Subsequent geophysical survey has identified a number of possible pits, faint ring ditches and a small oval enclosure within and around the monument (David and Payne 1997, 87-9), although these have not been subject to intrusive archaeological investigation. Bowden et al (2015. p35) note that the oval enclosure is a 'close parallel' with the Fargo Henge (NHLE 1012402).</p> <p>Although William Stukeley's interpretation of the Greater Cursus as a Roman race track has long since been disproven, the precise function of these types of monument remains uncertain.</p>	Neolithic	Within WHS boundary	(Fair)
AG16	411190	140338	North Kite Enclosure and Lake Barrows	1010863	MW110751, MW110752, MW112493, MW112525, MW112662, MW112663, MW112664, MW112691, MW112692, MW112693, MW112784, MW112820, MW113060, MW113061, MW113062, MW113063, MW113064, MW113065, MW113066, MW113067, MW113068, MW113069, MW113070, MW113071, MW113072, MW113073, MW113074, MW113075, MW113076, MW113077, MW113078, MW113079, MW113080, MW113081, MW113082, MW113083, MW113084, MW113085, MW113086, MW113087, MW113088, MW113131, MW113132, MW113135, MW173297, MW173475, MW173476, MW173477	<p>The Asset Group includes the North Kite Enclosure, numerous round barrows, an Early Neolithic long barrow and sections of several linear boundaries. These form part of a single Scheduled Monument. The Asset group also contains a number of non-designated, round barrows</p> <p>The North Kite Enclosure is a poorly understood trapezoidal earthwork enclosure of uncertain date. Some authors (Bowden et al. 2012, 32; RCHME 1979, 26-28) have suggested that the 'enclosure' is actually a partial survival of a wider complex of linear earthworks, while others see it as the focus for later linear features representing a number of phases of construction. One theory is that the feature is associated with a potential large enclosure around Normanton Down which could suggest a possible 'reserved space around Stonehenge and the Normanton Down barrows' Bowden et al. 2015, 72-75).</p> <p>Evidence of a section of the ditch beneath one of the barrows excavated by Ernest Green in 1958 suggests it pre-dates a round barrow cemetery which lies within and around it. Fieldwalking in 2004 identified large spreads of predominantly Late Neolithic and Early Bronze Age worked flint within the area of the Asset Group, particularly within and adjacent to the eastern edge of the enclosure and the non-designated barrow group (Wessex Archaeology 2004).</p> <p>The main barrow cemetery, located outside the southwest corner of the North Kite enclosure, comprises 15 bowl barrows, a twin bowl barrow, four bell barrows and two disc barrows, all of which are Scheduled. Three additional non-designated possible barrows have also been identified within the main cemetery (MW112662, MW173297, MW173476) along with two additional further barrows identified from cropmarks just to the south of the Scheduled Monument boundary (MW113082, MW173475). Another possible barrow (MW113068) lies just outside the Scheduled Monument boundary, adjacent to the twin barrow. An intrusive Saxon burial was found within one of the barrows.</p> <p>The Early Neolithic long barrow appears to form the focus of the cemetery, though the North Kite Enclosure's relationship with the earlier long barrow is uncertain. Another discrete barrow group to the east of the North Kite is composed of six possible monuments (MW112784, MW112820, MW113085, MW113086, MW113087, MW113088) with two possible further outliers to the south (one within the Scheduled Monument boundary) (MW113083, MW113084).</p> <p>Many of the barrows were excavated by William Cunnington, Sir Richard Colt Hoare, Edward Duke and William Stukeley. Stukeley referred to the group as 'The Prophets Barrows' in reference to a group of French protestants who supposedly preached from the summit of the largest barrow in 1710. There have also been some more recent investigations by Ernest Greenfield and William Francis Grimes in the late 1950s. There is no record of any excavation of the long barrow (Bowden et al. 2012,10). Although a number of the barrows have been truncated by modern agricultural activity, archaeological and palaeoenvironmental remains with the potential to add to our understanding of funerary practices, landscape, technology and society are likely to survive.</p>	Neolithic, Bronze Age	Within WHS boundary	Fair

			Stonehenge			<p>corresponding NHLE entry as including '....a levelled bowl barrow situated on the crest of Stonehenge Down, overlooking Stonehenge to the east and the Cursus to the north. The barrow is now difficult to identify on the ground. However, the ditch which surrounds the mound and from which material was quarried during its construction, survives as a buried feature and is visible on aerial photographs from which the overall diameter of the barrow can be calculated to be 12m.'</p> <p>The landscape surrounding it is replete with other Neolithic and Bronze Age funerary and ceremonial monuments, including large numbers of round barrows which are often clustered together to form discrete groups or cemeteries. However, this example occupies a somewhat isolated position, some distance from any other known monuments of comparable date, form or function.</p> <p>Little seems to be known about the monument covered by the scheduling; even its precise whereabouts are uncertain. It may be that recorded by the Rev. EH Goddard (1913 p.166) (and subsequently by Leslie Grinsell) as 'Amesbury 11e', which was apparently excavated in the early 19th century by Sir Richard Colt Hoare, who referred to it as 'Druid Barrow No. 13'.</p> <p>The lack of surface expression of the monument is probably the result of historical ploughing, which had apparently been responsible for the partial levelling of other barrows on Stonehenge Down during the 19th century (as detailed in Field and Pearson 2011 &amp; Barber 2014). The establishment of the Stonehenge Aerodrome on Stonehenge Down between 1917 and 1921, and the subsequent use of the site as a pig farm may also have resulted in further degradation of any surviving earthwork components of the monument.</p> <p>Geophysical surveys carried out as part of the Hidden Landscapes Project (Gaffney et al 2012) have identified an 'annular feature' approximately 100m to the southeast of the Scheduled Monument. It is possible that this feature may relate to that described by Grinsell / Goddard as 'Amesbury 11e' and / or Colt Hoare's 'Druid Barrow No. 13'. It is unclear if these, or other recent surveys have detected any clear traces of the monument described by the NHLE entry.</p>	Bronze Age	boundary

It includes 14 Scheduled Monuments. These are classified by the NHLE descriptions as encompassing: one twin bell barrow; six bell barrows, including one particularly large example known as 'The Monarch of the Plain' ('Amesbury 55'; NHLE 1012395); nine bowl barrows, one of which ('Amesbury 50'; NHLE 1012399) coincides with a possible earlier hengi-form monument/pit circle (Gaffney et al. 2012); one pond barrow (NHLE 1010895); one disc barrow (NHLE 1012403); and the Fargo hengi-form monument (NHLE 1012402). In addition, the Asset Group includes five other possible non-designated monuments (MWI12717, MWI12644, MWI12903, MWI12905, MWI12913) identified from aerial photographs and geophysical surveys, and the approximate location in which a Beaker burial (MWI12523), interred in a flat grave, was found in 1939.</p> <p>The precise nature and chronology of the monuments within this group are not fully understood. However, they appear to represent a complex series of monuments with multiple phases spanning the Late Neolithic and Early Bronze Age. Most of these are primarily understood to be funerary monuments, forming a cemetery group, although they may also have played a role in ceremonial or ritual activity. In some instances, the barrows may have been constructed directly above earlier, and more unusual forms of monument (Gaffney et al. 2012, Bowden et al. 2015 35-6).</p> <p>The Fargo hengi-form, discovered in 1937 and excavated the following year (Stone 1939), consists of a 7m diameter oval enclosure with opposing entrances to the north and south. The monument is undated, though it is widely assumed to be of Late Neolithic date (Bowden et al. 2015, 26). A number of inhumation and cremation burials of Beaker/Early Bronze Age date were also excavated at the site. Many of the other monuments were partially excavated in the early 19th Century by Sir Richard Colt Hoare and William Cunnington, and at least two appear to have been investigated by William Stukeley and Lord Pembroke in the early 18th Century (Amadio and Bishop 2010). More recent investigations have tended to be limited to the application of non-invasive techniques, although the bell barrow known as 'Amesbury 51' (NHLE 1012398) was excavated in 1960 (Ashbee 1978).</p> <p>Some of the monuments incorporate substantial and conspicuous earthwork mounds, banks and ditches. The earthworks of several of the monuments, particularly those clustered tightly together at the eastern end of the group, are particularly large and well preserved. As a result, they are amongst the most prominent monuments in the landscape, and are clearly visible from Stonehenge.</p>	Neolithic, Bronze Age	Within WHS boundary	Fair, poor

The barrows occupy an elevated position, although they are sited off the highest point, overlooking land to the south and southwest. They form two nucleated cemeteries, along with several individual outliers and smaller groups of barrows. The first nucleated cemetery lies within Durrington Down Plantation and comprises nine bowl barrows, two disc barrows and two saucer barrows within a central group as well as three bowl barrows and a pond barrow as possible outliers to the east and west. The second nucleated cemetery lies west of Durrington Down Farm and contains two saucer barrows and three (or four) bowl barrows with two outlying bowl barrows to the north-west and south-east. The other barrows include single barrows, pairs of barrows and groups of three. The discovery of a Bronze Age crouched inhumation burial (MW112511) at some distance from the recorded barrows suggests potential for flat graves across a wider area.	Bronze Age & Undated	Within WHS boundary	Good, fair, poor

				1009126, 1009127, 1009128, 1013871	MW112846, MW112511, MW112661, MW112702, MW112765, MW112828, MW112831	The preservation of the barrow earthworks is variable, although the majority of the largest nucleated cemetery near Durrington Down Plantation survive as relatively prominent earthworks, only two within the Durrington Down Farm group survive as slight earthworks. Although some of the barrows have reduced or been levelled by modern activity, archaeological and palaeoenvironmental remains with the potential to add to our understanding of funerary practices, landscape, technology and society are likely to survive. Partial excavations of the barrows in the 19th Century, including by the Sir Richard Colt Hoare, have confirmed the survival of archaeological and palaeoenvironmental deposits and remains.			
<b>AG21</b>	412021	142095	<b>Stonehenge Down Barrows</b>	1012383, 1012384, 1012385, 1012386, 1012387	MW112440, MW112890, MW112891, MW112892, MW112893, MW112894, MW112895, MW112916, MW113029	<p>The Asset Group contains five Scheduled Monuments, encompassing nine individual prehistoric monuments which are traditionally interpreted as various types of barrow, forming a cemetery group. They lie in close proximity to Stonehenge on Stonehenge Down, within the triangular parcel of land bounded by the A303, the former A344 and Byway 12, sometimes referred to as the Monument Field, or the Stonehenge Triangle.</p> <p>Two of the monuments, the 'bell' barrow to the east of Stonehenge (NHLE 1012386; Amesbury 11), and the 'disc' barrow to the south (NHLE 1012385; Amesbury 10) retain prominent earthworks. Indeed the former of these is one of the most prominent earthen mounds on the whole of Stonehenge Down. The others within the group have all been reduced in height by cultivation to varying degrees. The monuments have attracted the attentions of antiquarians on several occasions. Although none have been subject to intrusive investigation in modern times, non-intrusive surveys have been carried out on several occasions, (e.g. Payne 1995; Field and Pearson 2011; Linford et al 2012).</p> <p>Five of the mounds, known as Amesbury 5-9, (NHLE 1012383) form a tightly spaced group to the west of Stonehenge, conventionally interpreted as forming a nucleated round barrow cemetery. Recent surveys have indicated a greater degree of complexity in the morphology of Amesbury 6-9 than had previously been recognised, possibly indicating that these incorporate earlier and more unusual forms of monument and/or were the result of sequential phases of construction. For example, geophysical survey has suggested that Amesbury 6-9 may have originated as henge-like monuments or pit circles, or in the case of the Amesbury 7, a possible oval barrow, mortuary enclosure or 'short' long barrow (Bowden et al 2015 p26 &amp; p35; Linford et al 2012).</p> <p>Amesbury 10a (NHLE 1012384 / MW112440), which lies just to the northwest of the nucleated group, was partially excavated in the early 19th century by Sir Richard Colt Hoare, who interpreted it as a ploughed down long barrow. Investigation of the monument during the Stonehenge WHS Landscape Project failed to find evidence to substantiate Hoare's interpretation, though it was conceded that this was conceivable (Field and Pearson 2011, p.12). It is currently recorded in the NHLE as an 'oval bowl barrow'.</p>	Neolithic, Bronze Age	Within WHS boundary	Fair, poor
<b>AG22</b>	412242	142193	<b>Stonehenge</b>	1010140	MW112442, MW112450, MW112515, MW112517, MW112520, MW112914, MW112915, MW112919, MW174644, MW174646, MW174647	<p>The development of Stonehenge, particularly the sequence of the erection, dismantling and re-erection of the stone settings is complex and still the subject of some debate. However, the current 'consensus' model (Darvill et al 2012; Marshall et al 2012; Bowden et al 2015, 32-54) identifies five stages for the development of the monument, beginning with the construction of the circular ditched enclosure around 3100-2920 BC.</p> <p>There continues to be much debate as to the function of Stonehenge (summarised in Parker Pearson 2013). Indeed, it could have fulfilled several roles, and these may have changed during its lifetime of active use; this may be reflected in the sequential modifications to the henge. For instance, the monument formed the focus of a large cremation cemetery during the earlier stages of its use, although it presumably also played a role in other forms of ceremonial/ritual activity at this time. Although burials were interred at the site in later periods, the funerary associations of the henge appear to have declined after this. It is widely accepted that the monument is deliberately constructed on certain astronomical alignments, specifically, the midwinter sunset (or midsummer sunrise) and the most southerly moonrise/most northerly sunset (Ruggles 1997, Chadburn and Ruggles 2017). Whatever its precise function, Stonehenge would both have served as a major focus of ceremonial, communal and funerary activity over a considerable span of time, including during its initial construction, subsequent use and sequential remodelling.</p> <p>The 'globally famous and iconic monument' monument (Attribute 1) also dominates modern perceptions of the WHS, and, together with the associated Neolithic and Bronze Age monuments within the surrounding landscape, has exerted 'an unwavering influence on architects, artists, historians, and archaeologists' (SoOUV; Criterion ii). As one of the key or principal monuments of the WHS, it is held to 'exemplify the creative genius and technological skills for which the property is inscribed' (SoOUV; Statement of Integrity). Its survival, along with the interrelated monuments within the WHS boundary, provides an 'outstanding illustration of the evolution of monument construction and of the continual use and shaping of the landscape over more than 2000 years' (SoOUV; Criterion ii) and provides an 'Exceptional insight into the funerary and ceremonial practices in Britain in the</p>	Neolithic, Bronze Age	Within WHS boundary	Fair

						Neolithic and Bronze Age' (SoOUV; Criterion iii).			
AG23	412297	143042	The Greater Cursus, Amesbury 56 and Winterbourne Stoke 30 Round Barrows, and the Amesbury 42 Long Barrow	1009132	MWI12439, MWI12437, MWI12901, MWI12902	<p>The Asset Group contains a single Scheduled Monument (NHLE 1009132) encompassing the Greater Cursus, two round barrows situated within its western end (known as 'Amesbury 56' and 'Winterbourne Stoke 30') and a long barrow ('Amesbury 42') at its eastern end.</p> <p>The name 'cursus' was first suggested in c.1723 by the antiquarian William Stukeley, with reference to the Greater Cursus, which he compared to a Roman chariot race track (English Heritage 2011). The Greater Cursus is the largest single monument in the WHS. It consists of a c.3km long and up to 130m wide enclosure, aligned west-southwest to east-northeast across a flat ridge and partly within a shallow combe on the Avon-Till interfluvium, some 700m to the north of Stonehenge. It is defined by a ditch with inner and outer banks, which are punctuated by occasional gaps. Excavations at a number of locations have indicated that the ditch varies in depth, between c.0.75m and 2m. The monumental earthworks vary in prominence along the length of the Greater Cursus as a result of a combination of natural processes, modern disturbance and deliberate levelling (Pearson and Field 2011).</p> <p>Nevertheless, the Greater Cursus is one of the better preserved examples of this form of monument (English Heritage 2011). The Greater Cursus is one of the earlier monumental features in the Stonehenge landscape, and is now understood to be considerably older than previously thought; a radiocarbon date obtained from an antler pick at the bottom of the ditch suggesting that it was constructed c.3630-3375 BC (Thomas et al. 2009). Although the function of the Greater Cursus is uncertain, many theories have been advanced (e.g. as summarised in Bowden et al. 2015, 22-6; Pearson and Field 2011, 35).</p> <p>The Early Neolithic long barrow known as Amesbury 42 is situated at the eastern end of the Greater Cursus and orientated north-south at right-angles to it. The monument is visible as a slight earthwork, although this is difficult to identify, having been reduced in height by cultivation and forestry. The precise date of the Amesbury 42 long barrow is uncertain, although it is thought to possibly slightly pre-date the Greater Cursus (English Heritage 2011; Parker Pearson 2012). The long barrow was partially excavated by John Thurnam in 1866. It has also been investigated on several occasions in more recent times (Parker Pearson et al. 2008; Parker Pearson 2012; Richards 1990, 96-108). Evidence for re-cutting of the ditches and presence of secondary interments shows that the construction and use of the long barrow was not confined to a single phase of activity (Bishop 2011, 18).</p> <p>The two later round barrows within the western end of the Greater Cursus, along with the groups of similar monuments clustered around its eastern and western terminals, and indications that the Cursus ditch was re-cut in the 3rd millennium BC (Borden et al. 2015, 28), provide evidence that the monument continued to influence activity in this landscape for a considerable period after it was constructed.</p> <p>The more westerly of the two round barrows (Winterbourne Stoke 30), which has been levelled by the construction of military buildings in 1914-1918 and subsequent agricultural operations, was subject to total excavation in 1958 (Christie 1963). This demonstrated that it was of the 'bell barrow' type. A central cremation in a pit and an infant inhumation were found. The Amesbury 56 round barrow, which retains a conspicuous earthen mound, was partially excavated in the 19th Century, revealing a primary inhumation with a bronze dagger and a polished pebble, and two secondary inhumations.</p>	Neolithic (Greater Cursus and Amesbury 42 long barrow); Bronze Age (round barrows)	Within WHS boundary	Fair, poor
AG24	412905	141623	Stonehenge Bottom / Luxenborough Barrows	1008947, 1012371, 1012372, 1012373, 1012374, 1012391, 1012392, 1012587	MWI12624, MWI12746, MWI12797, MWI12798, MWI12799, MWI12810, MWI12924, MWI13030, MWI13033, MWI13034, MWI13035, MWI13036, MWI13037, MWI13038, MWI13039, MWI13040, MWI13041, MWI13051	<p>The Asset Group comprises 12 scheduled round barrows, predominantly classified as 'bowl' types, located at Stonehenge Bottom and Luxenborough Plantation. It includes a discrete cluster of six bowl barrows in Luxenborough Plantation, two outliers to the northwest and northeast, a further group of three bowl barrows in woodland to the north and the 'King Barrow' (NHLE 1008947) on the northern edge of the A303. Whilst the individual barrows of Amesbury 19 (NHLE 1012374) and Amesbury 22 (NHLE 1012372; MWI13035) are recorded by the NHLE descriptions as bowl barrows, they have also been described as bell barrows (e.g. Bishop 2011).</p> <p>In addition to the scheduled barrows within the Asset Group, a pair of standing stones were recorded by William Stukeley in area of Luxenborough Plantation (Parker Pearson et al. 2005, 7) with evidence for the possible position of five further barrows visible on aerial photographs (MWI12797, MWI12798, MWI12799; MWI12810, MWI13040). Neolithic pits (MWI12462, MWI12466, MWI12548) and finds (e.g. MWI12497) within the area of the Asset Group are indicative of earlier activity within the landscape.</p> <p>The King Barrow formed a key viewing point for several depictions of Stonehenge from the east (Ashbee 1981) with several other barrows also within this view (AG22 and AG21 respectively). Excavation of the barrow in 1960 recovered a significant amount of Neolithic material debris, which may indicate nearby occupation activity or material deliberately brought in to the area and deposited (Ashbee 1981).</p> <p>Some of the barrows in this group have been reduced in height or levelled by arable cultivation and</p>	Bronze Age & Undated (round barrows); Undated (Luxenborough standing stones)	Within WHS boundary	Fair

Asset Group Number	Easting	Northing	Asset Group Name	NHLE reference	HER reference	Description	Period	Location	Condition of monuments with surviving above-ground earthworks <sup>1</sup> .
						several the barrows have also been partially excavated in the 19th Century by antiquarians. Surveys of the earthworks suggests multiple phases of construction for some of the barrows (Bishop 2011).			
AG25	413349	143858	Packway Barrows	1009067, 1009068	MW112770, MW112771, MW112772, MW112773, MW112774, MW112853, MW112854, MW112860, MW112861, MW112862, MW112863, MW112864, MW112866, MW112867, MW112868, MW112869	The Asset Group includes two discrete round barrow cemeteries located south The Packway, close to Larkhill Camp. The larger of the two groups, to the southeast, contains eight bowl barrows and a pond barrow, all of which are scheduled. The group to the northwest contains six scheduled round barrows. Another bowl barrow, at the southwestern edge of the residential development associated with Larkhill Camp, has been destroyed. Five other mounds identified nearby (MW112779 and MW112865) were initially interpreted as possible additional barrows, although this is now considered unlikely. Three of the barrows within the northwestern group are recorded within NHLE description as retaining some surface expression as earthworks, though only one can currently be clearly identified due to overlying vegetation. All barrows within the southeastern group are still visible as earthworks. Although some of the barrows have reduced or been levelled by modern activity, archaeological and palaeoenvironmental remains with the potential to add to our understanding of funerary practices, landscape, technology and society are likely to survive. Partial excavations of the barrows in the 19th century, including by Sir Richard Colt Hoare, have also confirmed the survival of archaeological and palaeoenvironmental deposits and remains.	Bronze Age & Undated	Within WHS boundary	Good, poor
AG26	413389	142546	Old and New King Barrows	1009149; 1012367; 1009147; 1012379; 1012380; 1009148; 1012378; 1012381; 1012420	MW112935; MW112936; MW112434; MW112455; MW112652; MW112657; MW112658; MW112788; MW112791; MW112792; MW112794; MW112847; MW112848; MW112937; MW112938; MW112939; MW112940; MW113144; MW112687; MW112931; MW112928; MW112929; MW112930; MW112931; MW112932; MW112933; MW112934	The Asset Group includes 16 scheduled bowl barrows and 4 scheduled bell barrows forming the two barrow cemeteries known as 'Old King Barrows and New King Barrows and associated barrows'. They are prominently sited on King Barrow Ridge, overlooking Stonehenge, which lies to the west. At least 16 possible additional barrows have been identified on the western and eastern flanks of the ridge from aerial photographs and geophysical survey (e.g. Gaffney et al. 2012). The Old King Barrows lie to the north of The Avenue (AG27) and comprise at least nine bowl barrows on a broad southwest – northeast alignment. The New King Barrows group lies directly to the south of The Avenue and includes at least three bowl barrows and four bell barrows. Two further bowl barrows to the southwest of Old King Barrows are likely to be outlying members of this group, as they lie at a similar elevation and alignment along King Barrow Ridge. Two further outlying bowl barrows lie to the south of The Avenue. Neolithic and Bronze Age worked flint recovered during partial excavations of some of the New King Barrows in 1987 and 1990 indicating the use of the area prior to and during the construction of the monuments (Clea and Allen 1994). A large amount of Neolithic flint has also been recovered during fieldwalking along the King Barrow Ridge (Bishop 2011, 7). Furthermore, the results of geophysical survey within and around the Asset Group may indicate earlier Neolithic monuments beneath the barrows (MW12652). The prominence of these earthworks and proximity to Stonehenge meant that these barrows were the subject of early antiquarian interest including by John Aubrey. One of the barrows was opened in 1649 and found to contain 'Coales and pieces of goates hornes and stagges horns', while another contained 'a bugle-horn tipt with silver at both end' [sic]. Although Sir Richard Colt Hoare did not excavate any of the barrows along the ridgeline due to existing tree cover (Bishop 2011, 7), he did excavate some of the outlying examples, in some cases finding evidence of previous disturbance.	Neolithic (bowl barrow among New King Barrows: MW112928); Bronze Age & Undated (round barrows);	Within WHS boundary	Fair
AG26A	413639	142865	King Barrows (Old King Barrows, north)	1009149; 1012367; 1009147; 1012379; 1012380; 1009148; 1012378	MW112935; MW112936; MW112434; MW112455; MW112652; MW112657; MW112658; MW112788; MW112791; MW112792; MW112794; MW112847; MW112848; MW112937; MW112938; MW112939; MW112940; MW113144

AG27	413413	142239	The Avenue	1010140	MW112527	The Avenue is a linear feature, dating to the end of the Late Neolithic or the start of the Early Bronze Age, which appears to have provided a formal approach to Stonehenge, linking it with the River Avon at West Amesbury and the West Amesbury Henge. It consists of parallel banks c.6 m wide and 0.2 m high enclosing a corridor c.12 m wide. The banks are flanked by a partially infilled outer ditch c.3 m wide and 0.2 m deep (though originally up to c.0.9 m in depth). The Avenue varies slightly in overall width, with an average of c.30 m. From its junction with the northeastern entrance to Stonehenge, the Avenue extends for a distance of 560 m in a northeast direction. This section follows the solstitial axis of Stonehenge. On the west side of Stonehenge Bottom, the Avenue turns to run west south-west – east south-east for a distance of 760 m towards King Barrow Ridge, from which point it curves	Bronze Age	Within WHS boundary	Poor

Asset Group Number	Easting	Northing	Asset Group Name	NHLE reference	HER reference	Description	Period	Location	Condition of monuments with surviving above-ground earthworks <sup>1</sup> .
						gradually towards the south-east for a distance of 500 m, running in a straight line again for the final 900 m to the River Avon. The monument is visible as a slight earthwork for the first 1 km to the centre of Stonehenge Bottom. From that point, it is difficult to identify above ground, although it is visible on aerial photographs and geophysical surveys. Within the Avenue, at a distance of 24 m from the entrance to Stonehenge, is the 'Heel Stone', a sarsen block standing 4.9 m high and inclined distinctly towards the centre of Stonehenge. The stone is surrounded by a ditch 12 m in diameter and 2 m wide, partly visible as a slight earthwork. The Avenue has been subject to several episodes of archaeological excavation throughout the 20th century (e.g. as documented in Cleal et al 1995 p.291-329). Intrusive investigations have also been carried out more recently during the Stonehenge Riverside Project (Parker Pearson M, et al 2008; Allen et al 2016) and in association with the closure of the A344 as part of the Stonehenge Environmental Improvements Project (SEIP; Wessex Archaeology 2016).			
<b>AG28</b>	413358	143254	<b>Cursus Barrows (East)</b>	1009065, 1009066, 1009073, 1009074	MW112850, MW112851, MW112852, MW112855, MW112856, MW112857, MW112858	The Asset Group consists of an east-west linear group of round barrows, some 450 m in length, located close to and parallel with the northern side of the eastern end of the Greater Cursus (NHLE 1009132; AG 23). A narrow plantation intervenes between the group of monuments and the Greater Cursus. It contains four Scheduled Monuments, described by the relevant NHLE descriptions as including: two bowl barrows (NHLE 1009065; one of which is known as Durrington 62a); three bowl barrows (NHLE 1009066; Durrington 60-2); a pond barrow (NHLE 1009074; Durrington 62b); and a further bowl barrow (NHLE 1009073; Durrington 62c). All of the barrows within this group, with the exception of the possible pond barrow (Soutar 2012 p.14), were partially excavated in the early 19th century by Sir Richard Colt Hoare and William Cunnington, who reported the discovery of urned cremation burials and deposits of burnt bone and ashes within several of them. More recent investigations have been limited to the application of non-intrusive techniques, which have including 'Level I' surveying as part of the Stonehenge World Heritage Site Landscape Project in 2011 (Soutar 2012). The antiquarian's accounts of their excavations tend to focus on the interments and associated finds, rather than the physical form of the monuments. The lack of modern, detailed excavation also means that there is an absence of radiocarbon dates. As a result, the precise nature and chronology of the monuments within this group are not fully understood. Interpretation is further hampered by the partial or total levelling of the earthworks due to ploughing and early military activity. At the time of the 'Level I' survey, it was observed that 'only two barrows survive as much reduced earthworks'; Durrington 60 and Durrington 62a (Soutar 2012 p.12).	Bronze Age & Undated	Within WHS boundary	Poor
<b>AG29</b>	413493	141492	<b>Coneybury Henge and Associated Monuments</b>	1012375, 1012376, 1012390	MW112498, MW112645, MW113053; MW113054, MW1174677	The Asset Group includes the Coneybury Henge and three bowl barrows, all of which are scheduled, forming a small group of monuments on Coneybury Hill. A further possible, non-designated barrow identified by geophysical survey (Lindford et al. 2015) is also included in this Asset Group. It is unclear whether a similar anomaly detected by the survey represents a mislocation of one of the scheduled examples or a further additional barrow (ibid.). Of the barrows within the Asset Group, two have been levelled by modern cultivation. However, the third, known as the King Barrow, is still upstanding and was partially excavated in the 18th Century. Coneybury Henge is also levelled (potentially in antiquity) (RCHME 1979, 13). However, aerial photography and geophysical survey has confirmed it as oval enclosure with an entrance to the northeast. Limited excavation in 1980 confirmed the presence and survival of the substantial enclosure ditch as well as some internal features (Richards 1990, 123-158). Finds from the 1980 excavation confirmed a Late Neolithic date for the monument although an Early Neolithic pit ('The Coneybury Anomaly') and later Bronze Age features were also located. The Early Neolithic pit contained a large quantity of animal bone and has been interpreted as evidence of feasting (Richards 1990, 40-61).	Early Neolithic (pit); Late Neolithic (Coneybury Henge); Bronze Age (round barrows)	Within WHS boundary	Fair, poor
<b>AG30</b>	413952	142027	<b>The Avenue Barrows</b>	1009146, 1010140, 1010331, 1010331, 1012127, 1012129, 1012130, 1012131, 1012132	MW112478, MW112653, MW112654, MW112718, MW112724, MW112921, MW112925, MW112926, MW112927, MW112945, MW112953, MW112954, MW113052, MW113055, MW113056, MW113127, MW113147	The Asset Group contains 15 round barrows, which form 8 Scheduled Monuments. These are predominantly classified by the NHLE descriptions as 'bowl' type barrows, though one (forming part of NHLE 1010331) is described as being a more elaborate bell-type barrow. All of these are located in relatively close proximity to the eastern section of the Stonehenge Avenue (AG 27), both to the north and south of the A303. In addition, the Asset Group contains a non-designated, levelled Early Neolithic long barrow (MW112478) and adjoining segmented ring ditch (MW112654), located east of the Avenue and south of the A303. Listed by the RCHME (1979, 1) as 'Amesbury 140', the long barrow seems to have initially been identified from aerial photographs, although it may have been mentioned in the mid-19th Century by Lukis (1864, 155). The presence of the long barrow, and the adjoining segmented ditch has been confirmed by recent geophysical survey (Wessex Archaeology 2016), though the exact nature of the relationship between the two features remains uncertain. Six of the round barrows form an east-west linear group, which is bisected by the Stonehenge Avenue, east of King Barrow Ridge and the north of the A303. The precise chronological sequence for	Neolithic (long barrow); Bronze Age / Undated (round barrows)	Within WHS boundary	Fair, poor

Asset Group Number	Easting	Northing	Asset Group Name	NHLE reference	HER reference	Description	Period	Location	Condition of monuments with surviving above-ground earthworks <sup>1</sup> .
						<p>the construction of this section of the Avenue and the linear barrow group is unknown. Two of the barrows on the western side of the Avenue (which form part of NHLE 1010140) were excavated in 1924 by Col. Hawley and Passmore (Passmore 1942), whilst two on the eastern side of the Avenue (NHLE 1010331) were partially excavated in 1959 by Major H.F.W.L. Vacher (Gingell 1988; RCHME 1979). Part of a further levelled bowl barrow (NHLE 1012129) located on the northern edge of, and partially destroyed by the A303 between King Barrow Ridge/Stonehenge Cottages and the Avenue was also investigated archaeologically in 1980 and 2001 (Wessex Archaeology 2002). The remainder of the group are not known to have been subject to any antiquarian investigation or detailed excavation in modern times</p> <p>The earthwork components of most of the monuments within this group appear to have either been levelled, or substantially reduced in height. The lack of, or diminished state of the earthworks, combined with a paucity of detailed intrusive investigation under modern, controlled archaeological conditions, has rendered the precise nature and chronology of the monuments within this group uncertain. However, several of the individual monuments have recently been detected by geophysical survey (Wessex Archaeology 2016). This has provided further information on the form of the monuments and possible associated features.</p>			
<b>AG31</b>	414448	142537	<b>Countess Farm Barrows</b>	1009135; 1014087; 1009150; 1009139; 1009136; 1021348; 1009137; 1009134; 1009144; 1014088; 1009143; 1009151; 1009142; 1012128	MW112655; MW112656; MW112719; MW112787; MW112871; MW112949; MW112961; MW112962; MW112763; MW112659; MW112743; MW112950; MW112951; MW112952; MW112958; MW175709; MW112743; MW112948; MW112947	The Asset Group includes 17 bowl barrows and a pond barrow, which form a scattered group of round barrows in the area of Countess Farm, on the western side of the River Avon. They are all Scheduled Monuments and have largely been identified from aerial photographs. The Asset Group also includes ten possible additional (non-designated) barrows, which have been identified from aerial photographs and geophysical survey. Although the Countess Farm barrows have largely been levelled by modern agricultural activity, buried archaeological and palaeoenvironmental remains with the potential to add to our understanding of funerary practices, landscape, technology and society are likely to survive.	Bronze Age & Undated	Within WHS boundary	Fair, poor
<b>AG31A</b>	414453	142672	<b>Countess Farm Barrows (north)</b>	1009135; 1014087; 1009150; 1009139; 1009136; 1021348; 1009137; 1009134	MW112655; MW112656; MW112719; MW112787; MW112871; MW112949; MW112961; MW112962; MW112763

<b>AG32</b>	414610	141666	<b>Vespasian's Camp Barrows</b>	1012126	MW112551, MW112590, MW113057, MW113058	<p>A large scheduled Iron Age univallate hillfort sited adjacent to the River Avon, containing three earlier rounds barrows (two within the northern part of the monument and one, within the southern part of the monument, identified by geophysical survey (Cole 1995 cited Bowden et al. 2016, 7). Entrances have been identified at the north and southeastern edges of the hillfort, this pattern is unusual as east and west are the more common positions. A number of tracks and rides through the camp converge at the southern barrow within the northern part of the monument, suggesting that it was reused as a landscape feature in the 18th century when the interior of the camp was incorporated into the landscaped park and garden of Amesbury House (Grade II*, NHLE 1000469). Excavations have identified two phases of construction for the ramparts but a limited period of use in the 5th and 4th century centuries.</p> <p>The hillfort has an historical association with antiquarians including William Camden and William Stukeley, who believed it to be Roman in date. Vespasian's Camp is one of several Late Bronze Age and Iron Age hillforts situated on the higher ground overlooking the river valley including Ogbury Camp (NHLE 1005677) and Casterley Camp (NHLE 1010074).</p>	Bronze Age (round barrows); Iron Age (hillfort); Post Medieval (18th Century) (Amesbury Abbey Park);	Within WHS boundary	Fair, poor

Asset Group Number	Easting	Northing	Asset Group Name	NHLE reference	HER reference	Description	Period	Location	Condition of monuments with surviving above-ground earthworks <sup>1</sup> .
						The southern part of the monument is bisected by Stonehenge Road and contains 20th century residential housing (excluded from the Scheduled Monument boundary). Some truncation of the western ramparts occurred due to the widening of the road in 1964. The two barrows within the northern part of the monument have been modified by later landscaping while the possible third barrow to the southern survives only as a below ground feature. Previous excavations of the hillfort and barrows has been limited.			
AG33	415023	143524	Durrington Walls, Woodhenge and Associated Sites	1009130, 1009131, 1009133, 1009140, 1009141	MW111875, MW111876, MW111877, MW111881, MW111892, MW111900, MW111907, MW111915, MW111956, MW111964, MW112098, MW112115, MW112117, MW112118, MW112119, MW112120, MW112121, MW112122, MW112247, MW112248, MW112249, MW112299, MW112443, MW112463, MW112552, MW112560, MW112611, MW112612, MW112619, MW112872, MW112873, MW112874, MW112875, MW113134, MW113138, MW173449, MW173453, MW173465, MW112321, MW174897	Durrington Walls is one of the largest known henge monuments and contained at least two timber circles within the interior. Entrances to the monument lie to the northwest and southeast, the latter overlooking the River Avon. To the south of the main henge is Woodhenge and several barrows and further barrows lie to the north. A long barrow lies to the southwest of the main henge along with a recumbent sarsen stone known as the Cuckoo Stone. Boundary stones within the site mark the former War Department boundary. Just to the north of the Scheduled Monument boundary lies an Iron Age enclosure (The Packway Enclosure; MW111964) and settlement activity from the Neolithic, Bronze Age, Iron Age and Roman periods has been identified in and around the monument. Several inhumation graves have also been found around the Durrington complex, although these are largely undated (RCHME 1979, 7). Woodhenge forms a much smaller henge monument containing six concentric rings of post-holes. The monument was in use c.1800 BC. The post rings found within Woodhenge mirror the structures revealed within the larger monument, implying a ceremonial relationship between the two. A further Neolithic post-hole circle has also been identified during recent research to the south of Woodhenge suggesting a series of monuments on an approximate north – south axis and potentially associated with the river. To the southwest of the henge is long barrow. Construction of the new main road in 1968 maintained the division of the eastern edge of the Durrington Walls from the rest of the henge. The road partially occupies the position of the southern and northern circles. Much of The Packway Enclosure lies beneath the modern roundabout. All the barrows have been levelled above ground by ploughing and survive only as below ground features. The post positions at Woodhenge are currently indicated by concrete plinths. Despite the reduction of the earthworks due to cultivation and the impact of the road research has demonstrated the archaeological potential of the site including nationally rare Neolithic settlement and associated features as well as later Bronze Age, Iron Age and Roman settlement (RCHME 1979; Wainwright 1971; Wainwright et al. 1971; Parker Pearson et al. 2005; 2006; 2007).	Long barrow (generic): Early to Middle Neolithic; Bowl Barrow: Late Neolithic to Late Bronze Age; Henge: Late Neolithic to Early Bronze Age	Within WHS boundary (though some associated elements extend beyond the northern edge of the WHS)	Fair, poor
AG37	412786	145349	Knighton Long Barrow	1010052	MW111703	Knighton long barrow is a large and well preserved example of its type. It is comprised of a substantial upstanding east-west mound, measuring approximately 60m long by 20m wide. The mound is flanked by partially infilled, but nevertheless well-defined ditches. An Ordnance Survey triangulation station surmounts the top of the mound. The long barrow has not been subject to any intrusive archaeological investigation in modern times, nor is there any known account of earlier excavation by antiquarians. However, Mrs M.E. Cunnington (1914, 390), who listed it as 'Figheldean 27', stated that 'There seems to be no record of this barrow ever having been opened, but it looks as if it had been dug into in more than one place'. Knighton long barrow is one of several examples of this form of Early Neolithic monument in the area outside of, and to the north of the WHS boundary. It is situated immediately outside of the northern perimeter fence of Larkhill Camp, within a large expanse of unimproved grassland forming part of the MoD training estates on Salisbury Plain. It occupies a prominent position at one of the highest points in the surrounding landscape and thus commands panoramic views in all directions, except where these are blocked by plantations and the intervening presence of Larkhill Camp.	Early and Middle Neolithic	Outside WHS boundary	(Good)
AG38	412468	144388	Larkhill Camp Long Barrow	1012167	MW112435	The Asset Group contains a single scheduled Early Neolithic long barrow. It is located within Larkhill Camp, immediately to the north of The Packway, which marks the northern boundary of the WHS. The Larkhill Camp long barrow appears to have been disturbed, and reduced in height, presumably as a result of historical ploughing and early military activity. Nevertheless, it remains evident above ground as a low, northwest to southeast aligned earthwork mound some 46m in length and 16m in width. The NHLE entry indicates that the mound is up to 1.1m high, although it now appears somewhat less pronounced than this. The entry also states that the mound is flanked along its long axis by the vestiges of now in-filled ditches up to 7m in width, although these are difficult to discern at ground level. The long barrow, which was listed by Mrs M.E. Cunnington (1914, 389) as 'Durrington 24', is not known to have been the subject of any antiquarian or modern archaeological investigation.	Early and Middle Neolithic	Outside WHS boundary	(Fair)
AG39	414115	144362	Larkhill Causewayed Enclosure	N/a	EWI7932	The Asset Group contains the site of a non-designated Early Neolithic causewayed enclosure located outside of the boundary of the WHS, at the eastern edge of Larkhill Camp. The Larkhill causewayed enclosure came to light unexpectedly in early 2017, and was subsequently partially excavated during a programme of archaeological investigations carried out for the Defence Infrastructure Organisation ahead of development for the Army Basing Programme. Along with the Robin Hood's Ball	Early Neolithic	Outside WHS boundary	(-)

Asset Group Number	Easting	Northing	Asset Group Name	NHLE reference	HER reference	Description	Period	Location	Condition of monuments with surviving above-ground earthworks <sup>1</sup> .
						<p>causewayed enclosure, some 4km to the west-northwest, it is one of only two examples of this rare and enigmatic class of Prehistoric monument known within the Stonehenge landscape.</p> <p>The results of the excavation have yet to be fully analysed and published, although a brief summary has been presented by Leivers (2017). The excavation uncovered a series of seven ditch segments, of varying length, width and depth, forming 117m of the northeastern arc of the enclosure. The remainder of the enclosure, which was projected to have a diameter of c.210m, extended beyond the edge of the excavation, into the area now occupied by Larkhill Camp. A particularly wide causeway of 13.5m separated the two easternmost ditch segments, and may have formed an entrance to the enclosure.</p> <p>The fills of the excavated ditch segments yielded a variety of cultural material, including pottery, flint debitage and tools, animal bone (predominantly cattle), fragments of human skull and a saddle quern. The primary fills contained fragments of Decorated Bowl pottery, most of which was of the stylistically local Windmill Hill type, whilst Grooved Ware, Beaker and a complete Collared Urn were recovered from fills higher in the sequence. Cattle bone at the base of one of the ditches yielded a radiocarbon date of 3780-3650 cal BC.</p> <p>Projections suggest that the entire circuit of the Larkhill causewayed enclosure was situated on a northeast-facing slope overlooking the River Avon, just below the brow of the low hill occupied by Larkhill Camp. This is in contrast to the Robin Hood's Ball causewayed enclosure, which is situated on a south-facing slope, overlooking the area in which Stonehenge was later constructed.</p>

3016	1008946	413027	142378	Bowl barrow 400m west of New King Barrows	Late Neolithic to Late Bronze Age
-	1008948	413285	142647	Bowl barrow 100m north of The Avenue and west of Old King Barrows	Late Neolithic to Late Bronze Age
2110	1008949	409759	142435	Bowl barrow 450m SSW of Airman's Corner on Winterbourne Stoke Down	Late Neolithic to Late Bronze Age
2111	1008950	409953	142373	Bowl barrow 550m south of Airman's Corner on Winterbourne Stoke Down	Late Neolithic to Late Bronze Age
4011	1009138	414851	142504	Bowl barrow 400m north of the A303 on Countess Farm	Late Neolithic to Late Bronze Age
-	1009145	414169	143070	Bowl barrow 170m south east of Strangways on Countess Farm	Late Neolithic to Late Bronze Age
2015	1010831	410818	141353	Bowl barrow 400m west of Normanton Gorse	Late Neolithic to Late Bronze Age
2018	1010832	411115	141627	Bowl barrow south of the A303 and north west of Normanton Gorse	Late Neolithic to Late Bronze Age
2016	1010833	410864	141475	Pond barrow south of the A303 and 400m west of Normanton Gorse containing the 'Wilsford Shaft'	Early to Middle Bronze Age
-	1010838	411291	141412	Linear boundary within Normanton Gorse	Bronze Age
-	1010895	410435	142868	Pond barrow 50m north of A344 west of The Cursus	Early to Middle Bronze Age
2112	1011039	410047	142378	Bell barrow 450m south of A344 on Winterbourne Stoke Down	Early to Middle Bronze Age
2113	1011040	410137	142384	Bowl barrow 400m south of A344 on Winterbourne Stoke Down	Late Neolithic to Late Bronze Age
2114	1011041	410234	142156	Pond barrow 700m south of A344 on Winterbourne Stoke Down	Early to Middle Bronze Age
2116	1011043	410382	142385	Bowl barrow 430m south of A344 on Winterbourne Stoke Down	Late Neolithic to Late Bronze Age
2115	1011044	410344	142240	Bowl barrow 600m south of A344 on Winterbourne Stoke Down	Late Neolithic to Late Bronze Age
2001	1011048	409744	141407	Bronze Age enclosure and bowl barrow 100m west of Longbarrow Cross Roads on Winterbourne Stoke Down	Bronze Age
-	1011708	410791	140701	Bowl barrow 100m south east of the southern edge of The Diamond south of the A303	Late Neolithic to Late Bronze Age
-	1011709	411093	140905	Bowl barrow 450m east of The Diamond south of the A303	Late Neolithic to Late Bronze Age
3015	1012388	412942	142468	Bowl barrow 500m WNW of New King Barrows north of the A303	Late Neolithic to Late Bronze Age
-	1012389	413215	142695	Bowl barrow 220m west of Old King Barrows north of the A303	Late Neolithic to Late Bronze Age
2009	1012394	410615	141767	Four bowl barrows 140m north of the A303 on Stonehenge Down	Late Neolithic to Late Bronze Age
2017	1013812	410893	141290	Bowl barrow 350m south west of Normanton Gorse	Late Neolithic to Late Bronze Age
-	1014147	413139	140699	Two bowl barrows 700m north west of Normanton Down House	Late Neolithic to Late Bronze Age

HIA Annex 2.3 – Inventory with summary descriptions of non-designated discrete assets

ES UID	HER or NHLE Reference	Easting	Northing	Name	Period
-	MW111889	415300	143100	Totterdown. Findspot, Neolithic axe.	Neolithic
-	MW112438	413802	143350	Between The Cursus & Larkhill. Findspot. Neolithic polished flint knife.	Neolithic
-	MW112451	413600	142400	North-east of New King Barrows. Findspot. Collection of Neolithic flints	Neolithic
-	MW112458	411100	143350	Flint Scatter East of Fargo Wood, Settlement. Surface collection and excavation uncovered area of Early Neolithic activity.	Neolithic
-	MW112461	412900	142000	West of King Barrows, Findspot. Late Neolithic flint knife.	Neolithic
3058	MW112462	413220	142040	West of the New King Barrows, Pit. A small Neolithic pit was excavated in 1968 by Faith Vatcher.	Neolithic
3075	MW112466	413320	141980	West of New King Barrow Wood, Pit. Neolithic pit containing flints and fragments of pottery found during excavation in 1967	Neolithic
4029	MW112477	414500	142100	Vespasian's Ridge, Pit. Neolithic pit excavated in 1967 contained a ground flint axe and nine fragments of bone.	Neolithic
-	MW112479	414662	143017	East of the Cursus. Pit. Excavated Neolithic pit.	Neolithic
3060	MW112481	413610	142510	King Barrow Ridge, Settlement. Predominantly Late Neolithic flint scatter below which sample excavation produced pits.	Neolithic
-	MW112483	414190	142640	North-west of Vespasian's Camp. Findspot. Part of a Neolithic stone axe.	Neolithic
-	MW112494	410700	140500	The Diamond, Findspot. 4 large cores; thought to be Neolithic and a large assemblage of flint tools.	Neolithic
-	MW112496	410870	143500	Find Spot, Fargo Plantation. Four sherds of Neolithic pottery.	Bronze Age
3074	MW112501	413450	141920	Neolithic Pit, South of Stonehenge Cottage. Fragments of Neolithic pottery were found in a pit. The pit contained the remains of at least three Neolithic Grooved Ware vessels, worked flint and animal bone was found within an evaluation trench. Also found were plant macrofossils including beans.	Neolithic
3058	MW112502	413220	142030	North Verge of A303 East Stonehenge, Pit. Later Neolithic pit found during road widening and excavated by Faith Vatcher in 1969.	Neolithic
-	MW112516	412160	142295	North-west of Stonehenge, Associated Finds. Some 'Sherds of "Late Bronze Age type" found during excavation of the underpass in 1968. They were in the lower of three turf layers'.	Bronze Age
3010.01.	MW112517	412270	142240	In Ditch of Stonehenge, Burial. A Bronze Age crouched burial in the Stonehenge ditch. A crouched inhumation of a young male in a grave cut into the ditch fill. Grave goods consisted of three barbed and tanged arrowheads and a stone wristguard.	Bronze Age
-	MW112523	412330	142760	Larkhill, Burial. Bronze Age grave found with 2 beakers.	Bronze Age
-	MW112524	412600	141900	South-east of Stonehenge on Stonehenge Down, Findspot. 'Flanged copper alloy axe of Arreton Down Tradition with chevrons hammered on both faces. Found by donor while digging a trench at Amesbury.' The actual location of the discovery is unclear- NGR v. imprecise.	Bronze Age
-	MW112530	411102	143400	East of Fargo Wood I Flint Scatter. Surface collection and excavation produced Neolithic to Later Bronze Age pottery and Neolithic flints. Occupation.	Neolithic and Bronze Age
-	MW112534	410330	143620	Find Spot, Field North & North-west of the Lesser Cursus. A Prehistoric pottery fragment, possibly Bronze Age, and flint tools.	Bronze Age
-	MW112535	414421	141413	Hunters Hill, West Amesbury. Findspot. A probable Bronze Age pottery fragment was recovered from an evaluation excavation in 1997.	Bronze Age
-	MW112539	412700	141900	South east of Stonehenge, Findspot. Bronze Age axe.	Bronze Age
-	MW112540	414480	143900	Pit, Larkhill. A single pit and scoops were revealed during an evaluation and included a Bronze Age worked flint scatter.	Prehistoric
3058	MW112548	413250	142040	West of the New King Barrows, Pit. A small Early to Middle Neolithic pit was excavated by Faith Vatcher in 1968.	Neolithic
-	MW112609	412450	143930	Burial, West of Willoughby Rd:Larkhill Camp. An undated burial found in grave with no grave goods to date it. Excavated 1966.	Unknown
-	MW112614	411011	142917	Pit on West End of Cursus. A small hollow/pit cut by the ditch of barrow SU14SW738; it yielded pine charcoal, calcined flints and flint debitage.	Unknown
-	MW112631	414605	143087	East of the Cursus, Burial. Undated unexcavated burial. Revealed in 2003. It is unclear whether the feature represents an in situ burial or whether the remains have been redeposited in a pit or ditch terminus.	Undated
-	MW112646	413370	142080	West of Old & New King Barrows. Round Barrow. Undated, levelled barrow only visible on a National Monuments Record aerial photograph.	Unknown
-	MW112647	413360	142150	West of Old & New King Barrows. Round Barrow. Undated levelled barrow visible as a soil mark.	Unknown
-	MW112648	413400	142200	West of Old & New King Barrows. Round Barrow. Undated levelled bowl barrow visible as a soil mark.	Unknown
-	MW112649	413350	142270	West of Old & New King Barrows. Round Barrow. An undated levelled bowl barrow.	Unknown
-	MW112650	413380	142540	West of Old & New King Barrows. Round Barrow. An undated levelled barrow visible on aerial photographs.	Unknown
2162	MW112679	410120	142920	Ring ditch, west of the Cursus. An undated ring ditch visible on aerial photographs.	Unknown
-	MW112680	410730	142692	South-west Fargo Plantation. Round barrow. An undated levelled barrow is visible on aerial photographs.	Unknown

ES UID	HER or NHLE Reference	Easting	Northing	Name	Period
-	MWI12705	411580	144419	Bowl Barrow, Durrington Down. Site of an undated bowl barrow.	Unknown
-	MWI12769	411001	144000	Bowl Barrow, North-west of Fargo Lodge. A Bronze Age bowl barrow excavated in the 19th century and not seen since.	Bronze Age
-	MWI12794	413758	143014	East of Old King Barrows. Undated pits were revealed during a geophysical survey in 1997.	Unknown
-	MWI12826	410680	143620	Barrow, west of Fargo Plantation. Possible site of undated barrow.	Unknown
-	MWI12827	412870	143560	Pond Barrow, North of The Cursus. Possible Bronze Age pond barrow.	Bronze Age
-	MWI12831	411800	142660	Pond Barrow, North of The Cursus. A possible Bronze Age pond barrow. Depression believed to be natural.	Bronze Age
-	MWI12849	413260	143040	South of Cursus. Contrary to HER monument type, not a barrow but a findspot point. refers to a 'decorated flanged bronze axe of Irish type found in 1952 while digging a trench'. The actual location of the discovery is unclear.	Bronze Age
-	MWI12873	414840	142930	North of Halfmoon Clump. Possible site of an undated barrow.	Unknown
-	MWI12879	410280	142370	Winterbourne Stoke Down, Round Barrow. A possible undated round barrow.	Bronze Age
-	MWI12918	412810	142470	North-east of Stonehenge. Barrow. Possible undated levelled barrow.	Undated
-	MWI12942	413580	142260	East of New King Barrows. Ring ditch. Possible undated ring ditch visible on aerial photographs.	Unknown
-	MWI12943	413350	142800	West of Old King Barrows. Round barrow. A possible undated bowl barrow revealed as soilmark.	Unknown
4023	MWI12959	414420	142180	North-west of Vespasian's Camp. A possible undated ring ditch visible on aerial photographs.	Unknown
4022	MWI12964	414300	142180	North-west of Vespasian's Camp. Possible undated ring ditch.	Unknown
4025	MWI12965	414480	142210	North-west of Vespasian's Camp. Possible undated circular cropmark.	Unknown
3076	MWI13050	413730	141820	South-east of New King Barrows, Ring Ditch. A possible undated ring ditch.	Undated
5035	MWI13118	410140	144080	Circular Enclosure, North-west of Fargo Lodge. Possible undated enclosure.	Unknown
2147 / 2097	MWI13119	410082	142599	Stonehenge Racecourse, Linear Feature. An undated linear ditch visible as a soilmark. It was observed in trenches during an evaluation excavation in 1998.	Unknown, possibly Middle Bronze Age
-	MWI13154	413780	142450	North of Avenue. Findspot. Fragment of Bluestone.	Unknown
2160	MWI13156	410050	142780	North of Winterbourne Stoke Group. 3 undated ring ditches visible on aerial photographs.	Unknown
4024	MWI13157	414420	142280	North-west of Vespasian's Camp. Site of dubious and undated ring ditch.	Unknown
-	MWI13161	411380	143270	East of Fargo Plantation, Round Barrow. Site of undated barrow.	Unknown
2159	MWI6395	409950	142600	Ring Ditch, Winterbourne Stoke Down. One of two undated ring ditches.	Unknown
2151	MWI6403	409887	141939	Bronze Age Barrow, North of Winterbourne Stoke Roundabout. A Bronze Age levelled barrow. This was subject to geophysical survey and trial trench evaluation in 2018 associated with the present scheme. No traces of the putative barrow were identified.	Bronze Age
-	MWI6920	409899	141598	Bowl Barrow G2 SU04SE668. Findspot. Neolithic serrated blade.	Neolithic
-	MWI6925	409913	143467	S of Greenland Farm. Findspot. Flakes, cores, burnt flint and miscellaneous debitage found during systematic fieldwork for the Brown Routes proposals of the A303.	Bronze Age
2145	MWI74620	409865	142798	Pits, Airman's Corner. A number of pits of unknown date were identified by a geophysical survey.	Unknown
-	MWI74642	411507	141212	Pits, Normanton Down. A large number of pits of an unknown date were identified by a geophysical survey.	Unknown
3038	MWI74648	412306	142253	Pits, Stonehenge. A number of pits around Stonehenge were identified by a geophysical survey.	Neolithic
-	MWI74695	410143	142534	Pits, Airman's Corner. Pits of an unknown date were identified by a geophysical survey.	Unknown
-	MWI74695	410212	142889	Pits, Airman's Corner. Pits of an unknown date were identified by a geophysical survey.	Unknown
-	MWI74878	409898	142052	Undated Pits, East of Winterbourne Stoke. Numerous pits of an unknown date were identified by a geophysical survey.	Unknown
-	MWI74896	415248	143605	Neolithic Pits, Durrington Walls. Pits of an unknown date were identified by a geophysical survey, later identified as Neolithic during an excavation.	Neolithic
3101	MWI75678	412648	142298	Possible Early Neolithic Pit or Pit-Like Feature. A borehole survey conducted from 2014-2016 uncovered deposits and evidence consistent with a pit or pit-like feature.	Early Neolithic
-	MWI75679	413213	142611	Possible Pit or Pit-Like Feature. A borehole survey conducted from 2014-2016 uncovered deposits and evidence consistent with pits or pit-like features of uncertain date.	Unknown
2178	MWI75708	410650	141335	Undated Pits, South of Winterbourne Stoke. Pits of an unknown date were identified by a geophysical survey.	Unknown

ES UID	HER or NHLE Reference	Easting	Northing	Name	Period
3109	MWI75709	414079	142293	Undated Pits, North of Vespasian's Camp. Pits of an unknown date were identified by a geophysical survey.	Unknown
4027	MWI75710	414583	142161	Undated Ring Ditch, North of Vespasian's Camp. A ring ditch of an unknown date was identified by a geophysical survey.	Unknown
-	MWI75713	414999	142228	Undated Pits, West of Countess Farm. Pits of an unknown date were identified by a geophysical survey.	Unknown
-	MWI75753	405732	140769	Worked and Burnt Flint, A303. Findspot. No significant concentrations appear to have been recorded.	Unknown
-	MWI75753	409126	141313	Worked and Burnt Flint, A303. Findspot. Worked and burnt flint identified during fieldwalking surveys.	Unknown
3085	MWI75988	411429	141576	Undated Ring Ditch, Northwest of Normanton Gorse. A ring ditch of an unknown date was identified by a geophysical survey.	Unknown
2180	MWI75990	411458	141629	Undated Pits, Northwest of Normanton Gorse. Numerous pits of an unknown date were identified by a geophysical survey.	Unknown
3086	MWI75995	413352	141985	Neolithic Pit, South of A303. A pit of a Neolithic date was found during an archaeological investigation.	Neolithic
2033	MWI76197	406689	140942	Bronze Age Flint, Roman Pottery and other Fieldwalking Finds, Between Stonehenge Down and Parsonage Down	Bronze Age
2033	MWI76197	407824	141196	Bronze Age Flint, Roman Pottery and other Fieldwalking Finds, Between Stonehenge Down and Parsonage Down	Bronze Age
2033	MWI76197	409404	141387	Bronze Age Flint, Roman Pottery and other Fieldwalking Finds, Between Stonehenge Down and Parsonage Down	Bronze Age
2033	MWI76197	409876	141296	Bronze Age Flint, Roman Pottery and other Fieldwalking Finds, Between Stonehenge Down and Parsonage Down	Bronze Age
2033	MWI76197	409999	141268	Bronze Age Flint, Roman Pottery and other Fieldwalking Finds, Between Stonehenge Down and Parsonage Down	Bronze Age
2033	MWI76197	410674	141649	Bronze Age Flint, Roman Pottery and other Fieldwalking Finds, Between Stonehenge Down and Parsonage Down	Bronze Age
2033	MWI76197	410733	141569	Bronze Age Flint, Roman Pottery and other Fieldwalking Finds, Between Stonehenge Down and Parsonage Down	Bronze Age
[10002]	-	410429	141499	Western portal evaluation: Possible hengiform enclosure (10002) identified as an anomaly on gradiometer survey (8001) and GPR survey (10002), located southeast of the Winterbourne Stoke Crossroads Barrow Group.	?Neolithic
[23403]	-	approx. 401250	141370	Western portal evaluation: Beaker period pit. Within the western section of the site, a Beaker pit within Trench 234 (23403) produced fragments of Domestic Beaker, worked animal bone and burnt and worked flint.	Early Bronze Age
[44123 & Various]	-	approx. 409450	141180	Longbarrow junction north and south: Early Bronze Age enclosure and scattered pits. A 'C'-shaped or discontinuous oval enclosure in the central southern part of the site, known from geophysical and NMP data, was investigated in Trench 334. Its long axis is orientated north-east to south-west with the ditch on its south-eastern side extending further to the south-west (approximately 50 m, but not extending into Trench 388) than its north-western counterpart (roughly 34 m, but not extending into Trench 387). A probable north-east facing entrance (just under 4 m wide) is indicated by the non-intrusive surveys, with the enclosure also being 'open' to the south-west (approximately 27 m wide). However, another linear geophysical anomaly (42 m long) located 37–46 m to the south-west, which may be associated with the 'C'-shaped enclosure, was investigated in Trench 327. This enclosure and potentially associated features were targeted in Trenches 327, 331, 334, 338, 387 and 388. Outside WHS.	Early Bronze Age
[44103]	-	approx. 409830	141750	Longbarrow junction north and south: Cremation burial. An inverted Collared-Urn containing a cremation burial was uncovered within a small circular pit (44103) in the north of the site (Trench 441). A short slightly curving linear gully segment (44123) was tentatively interpreted as the remnant of a defining enclosure. Outside WHS.	Early Bronze Age
[26023]	-	approx. 410250	141365	Western portal evaluation: Tree throw with flint and pottery. A tree-throw (26023) to the south of the grave (26009) contained 117 pieces of burnt flint and 34 fragments of Beaker pottery.	Early Bronze Age
[26009]	-	approx. 410570	141540	Western portal evaluation: Beaker burial (26009). A crouched Beaker burial (Trench 260), located within the central area of the site. The grave contained a Wessex/Middle Rhine Beaker, a copper awl or pin/needle shank fragment and a cylindrical shale object.	Early Bronze Age
[Various]	-	Various	Various	Western portal evaluation: Flint scatters (various). The initial collection of worked flint (typical of assemblages from the ploughzone) and burnt flint has indicated a number of concentrations within the western third of the site and the central part of the eastern half of the site, although there was no firm correlation with archaeological features revealed by subsequent trial trenching.	Neolithic, Bronze Age
[Various]	-	Various	Various	Eastern portal evaluation: Worked and burnt flint. Artefacts consisted primarily of an even background scatter of worked and burnt flint across the area, with a small number of slightly higher concentrations which may be the remains of activity areas now dispersed within the ploughzone. One concentration of worked flint (in Trench 512) derived from in situ knapping in the later Neolithic period or Early Bronze Age.	Later Neolithic, Early Bronze Age
[Various]	-	Various	Various	Rollestone Corner junction: Worked and burnt flint. Fieldwalking and test pitting did not identify any significant concentrations of material, recording worked flint assemblages typical of collections from the ploughzone in the area. Trial trench evaluation revealed a number of tree throws, two of which (Trenches 1107 and 1111) contained quantities of burnt and/or worked flint (including broad Neolithic material) and tiny fragments of prehistoric pottery.	Neolithic
[Various]	-	Various	Various	Longbarrow junction north and south: Scatter of worked and burnt flint, ditches, pits and postholes. North of the new Longbarrow junction, ploughzone surface artefact collection recorded a scatter of worked and burnt flint of Late Neolithic date. Beneath the scatter, trial trenching revealed features including ditches and scattered pits and post holes of Late Neolithic, Beaker and Bronze Age date.	Late Neolithic, Beaker and Bronze Age

## HIA Annex 2.4 – Inventory with summary descriptions of scheduled monuments within the WHS

ES UID	NHLE Reference	Easting	Northing	Name
-	1008943	411819	144102	Nine bowl barrows, two disc barrows and two saucer barrows forming the majority of a round barrow cemetery on Durrington Down
-	1008944	411995	144088	Bowl barrow forming part of the Durrington Down round barrow cemetery
-	1008945	412240	143586	Bowl barrow 160m south of Fargo Road, forming part of a nucleated round barrow cemetery
3016	1008946	413027	142378	Bowl barrow 400m west of New King Barrows
