

Where, how and when was a survey of bustards done in the area? **40.3.25** A map was sent to the ecologist 2 years ago which clearly marks the areas where bustards have been seen on a regular basis and have nested. Updated map on request (NOT FOR PUBLIC INFORMATION)

For transparency why was GBG not asked to accompany the surveillance group.

Birds are around the Western portal area more than the Eastern portal area – Manor Farm, Druids Estate, Yarnbury. **40.3.21**

Birds habitat is not predominantly grassland, for much of the year they frequent arable areas. **40.3.24**

At what distance is near **40.3.23** and who has advised this distance for Great Bustards?

Disappointed that GBG have not been contacted directly until now. It has been through information and invitation from Landowners and from individuals in other groups that GBG has heard of meetings etc. I put in representation both on a personal and for the GBG after both consultation meetings but still had to rely on word of mouth of group meetings.

I have attended forums in Amesbury which seems only to deal with Legacy and Benefits. I tried to get information by asking the forums and the telephone number at the back of the booklets to supply information and was told it wasn't available by the forum and no response from the contact number in the booklet
