To whom it may concern

I would like to express my concern that this is once again being put forward when the national highways have not made any changes to their plan that take into consideration the decision by the 2021 world heritage committee.

Alternative routes, such as the southern bypass whilst a bit trickier have been deemed less damaging and cheaper.

Climate concern has increased as well as the need to reduce emissions.

The environment act 2021 sets out new ambitions for nature recovery and I don't believe this has been addressed in the plans.

I would also like to ask that the development consent order be re-examined.

Yours sincerely
