I am very sad to hear that 'Growth' is being placed above all else by this new government. To risk our cultural heritage is heartbreaking at any time especially when it is to provide yet more concrete for the sake of motor transport which is extremely bad for the environment. All they seem to be interested in is making the rich richer and encouraging more immigration which needs more house building and more roads. I am all for growth..in ways that will make our island self sufficient, in farming and manufacture, in education and invention. When a party tells me that they want to ensure that no child will leave education without being able to fulfil its ambitions, to feel useful and valued, with a reason to get out of bed every day and to know that basic needs of food, health, warmth, and security in comfortable and attractive surroundings will be the norm not a drug induced dream they are the party I will vote for. If they promise to reduce the amount of private motorists on the roads, to promote the use of electric cycles and make it safer for people to walk along our countries roads—to abolish the idea of nuclear power plants and its eternally dangerous waste That part is the one I will Join.. the party who believes in People not Profit!
