

SPA Bird recording Wisley & Ockham														
Species	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	Observations
Nightjar	1	2	1	0	2	5	6	4	5	5	5	6	6	Substantial increase (x3) in line with the increase in heathland area and a reduction in pine woodland. We would expect the numbers to increase again with further heathland areas.
Woodlark	2	2	2	5	4	4	4	4	4	4	4	3	0	Substantial increase (x2) following forestry works and bare ground creation. Numbers dropped as heather closed canopy over large areas. We would expect numbers to rise again as substantial bare ground is created.
Dartford Warbler	4	4	4	1	0	0	0	0	0	3	7	6	4	Significant increase (x1.5) following increase in heathland area. The species was decimated by the heavy snow of 2009. The numbers have increased beyond their previous population on site following the increase in heathland area.
Heathland Creation		Start of 30ha felling works			End of 30ha felling works									
Events				Severe winter snow								Heather closing canopy
