Introduction

Project Details 1.1

- 1.1.1 The Project is located between the A2 in Kent and the M25 in the London Borough of Havering, passing through the Borough of Thurrock in Essex (Fig. 1). At the southern end of the Project a new road will connect to a new junction on the A2 east of Gravesend. The route would run north in a cutting to the Project's southern tunnel portal. The Project will run underneath the River Thames in a tunnel and emerge on the northern side of the river at East Tilbury. From the North Portal the road will run to the M25 at Junction 29 via the A13 and passes in between North and South Ockendon.
- 1.1.2 Excluding the tunnel but including M2/A2 and M25 improvements, the road runs for 27 kilometres through the London Borough of Havering, the Essex districts of Brentwood and Thurrock, and the Kent district of Gravesham (Fig. 1). The development of the project is being managed by LTC, a partnership between Highways England and a consultancy joint venture set up to oversee the scheme.
- 1.1.3 The development boundary includes areas of proposed ecological habitat mitigation areas, flood compensation schemes, temporary haul roads and car parks, lay-down areas and zones for material fabrication. Temporary zones for staff accommodation are also required, as are areas of permanent land take.
- 1.1.4 The potential impact of the scheme upon cultural heritage is a material consideration under the Ancient Monuments and Archaeological Areas Act of 1979, which imposes a requirement for Scheduled Monument Consent for any works of demolition, repair, and alteration that might affect a Scheduled Monument.
- The NPSNN December 2014 provides planning guidance for promoters of 1.1.5 Nationally Significant Infrastructure Projects on road and rail networks. It defines considerations concerning the Historic Environment and heritage assets, both designated and non-designated, and includes requirements to assess their significance including any contribution made by the setting. Such assessments shall be based upon documentary research, desk-based assessment and where necessary field evaluations.
- 1.1.6 For non-designated archaeological assets, protection is also afforded through the development management process as established both by the Town and Country Planning Act 1990 and the National Planning Policy Framework (NPPF). A revised National Planning Policy Framework was published on 24 July 2018, which sets out the Government's planning policies for England and how these should be applied to contribute to the achievement of sustainable development (DCMS 2018).

- 1.1.7 Following a study and public consultation by Highways England in 2016, the Preferred Route Announcement (PRA) was made in April 2017, and an Environmental Impact Assessment Scoping Report issued (Highways England 2017), section 7 of which sets out the requirements for Cultural Heritage. This was followed by a second phase of public consultation and more detailed development prior to the submission of the Development Consent Order (DCO) application timetabled for 2020.
- 1.1.8 In support of this application, and following the requirements of the NPSNN, a desk-based Archaeological Assessment is in preparation, which was to have been followed by trial trenching to clarify the extent and character of the archaeological resource affected by the scheme. A Scheme-wide Specification for Trial-Trenching was provided by LTC (Highways England 2018), detailing the structure and overall content of the Project-wide Written Scheme of Investigation (hereafter WSI).
- 1.1.9 LTC commissioned Balfour Beatty to deliver the pre-Enabling Works, and Oxford Archaeology (hereafter OA) was appointed by Balfour Beatty to prepare the Project-wide WSI for trial trenching, followed by a series of site-specific or group-site specific WSIs for approval by the key archaeological stakeholders in advance of trial trenching to inform the DCO.
- 1.1.10 Following consultation with the key archaeological stakeholders, who comprise Historic England both advising with regard to Scheduled Monuments and acting as the Greater London Archaeological Advisory Service (hereafter GLAAS) advising the London Borough of Havering, Place Services, Essex County Council advising Brentwood and Thurrock Borough Councils and the Kent County Council Archaeological Service advising Gravesham Borough Council, the Project-wide WSI has been divided into two parts, one dealing with the road scheme north of the Thames, the other the scheme south of the Thames. This document deals with the scheme in Kent south of the Thames.
- 1.1.11 The Desk-Based Assessment (DBA) was well-advanced when OA were appointed, but had not been completed. Consultation between LTC and the key archaeological stakeholders had already taken place, and the Scheme-wide Specification (Highways England 2018) had included provisional trench layouts based upon aerial survey and analysis for the part of the scheme north of the Thames, and upon geophysical survey for those parts surveyed south of the Thames.
- 1.1.12 In order to meet the requirements of the timetable for submission of the DCO application, and to take account of the presence of buried utilities, a first draft of this Project-wide WSI was prepared before completion of the DBA in order to allow trial trenching to proceed. HER data was obtained from Kent and Essex County Councils and from GLAAS by LTC in 2018, and this data was used to create the gazetteers for the DBA, which were then used by OA to inform the Archaeological Background for the Project-wide and detailed site-specific or group site-specific WSIs.
- 1.1.13 The Project-wide WSI provided a framework from which more detailed WSIs for individual land parcels or groups of land-parcels were to be prepared. The further detail was to involve closer examination of the archaeological evidence behind the HER entries, including any archaeological reports, and the consideration of Historic Map evidence.

- 1.1.14 Following the preparation of the first draft of this WSI, and amendments made following receipt of comments from the Key Archaeological Stakeholders at KCC, development of the scheme design resulted in changes to the scheme boundary that necessitated significant additions to the scope of the Project-wide WSI. In addition, important changes to the design of the route also affected the level of impact proposed in different areas.
- 1.1.15 As a result, and due to the desire to start trial trenching at the earliest opportunity in Kent, it was agreed that the existing draft Project-wide WSI should be used as the starting point for the preparation of detailed WSIs for the Kent part of the scheme, and that the Project-wide WSI would be revised and updated only when the detailed WSIs had been completed, when it would be possible to incorporate the key additional information obtained in their preparation.
- 1.1.16 The Archaeological Background section uses a 1km study corridor in order to provide an overview of the archaeology likely to be affected by the scheme, but does not consider most standing buildings or issues of setting, which are dealt with by the DBA. To provide appropriate context, however, Scheduled Monuments and any medieval or early post-medieval listed buildings within the wider study corridor are included.
- 1.1.17 This WSI does not deal with the tunnel beneath the Thames or the potential impact of the scheme upon Palaeolithic deposits, for which LTC have appointed Palaeolithic specialist Francis Wenban-Smith to develop a strategy for investigation of deposits of Palaeolithic potential. The Thames floodplain at either end of the tunnel will involve the excavation of deep sequences of deposits, and geoarchaeologist Martin Bates has been appointed by LTC to develop a deposit model for these and for other areas of deep deposits. Martin Bates and Francis Wenban-Smith will be working together on the Palaeolithic aspects of the deposit model, and developing a targeted strategy for the investigation of these deep sequences. A Written Scheme of Investigation for the Palaeolithic investigations has been prepared (Wenban-Smith and Bates 2020), which includes a series of transects of the deposit sequence across the line of the scheme, constituting a first step towards a scheme deposit model.
- 1.1.18 The impact upon the Thames floodplain in Kent is expected to be limited, but other areas of deep deposits in Kent include a number of dry valleys that run northwards across the site. A first phase of geotechnical Investigations (GI) has been monitored by Wessex Archaeology, and reports produced (Wessex Archaeology 2020).
- 1.1.19 In addition, LTC appointed Alex Godden, a specialist in Military remains from Wessex Archaeology, to prepare a Desk-based Assessment (DBA) of the 20th century military remains within the scheme, which include the former military airfield at Gravesend, crash sites and an assortment of lesser defensive emplacements. The report upon this was completed early in 2020, and is referenced in the part of Section 2.3 below dealing with modern remains.

- 1.1.20 Detailed WSIs for each group of land parcels within the scheme to be investigated by trial trenching in Kent have been prepared. The land in the Kent part of the scheme has been divided into five detailed WSIs, which have been distinguished by letters T, U, V, W and X. The areas covered by each WSI, and the land parcels included in each, are shown on Figure 14. Each detailed WSIs was submitted for approval on completion, in order to facilitate trial trenching as soon as possible.
- 1.1.21 The results of other specialist investigations have been included in the detailed WSIs if available at the time. The GI reports have been passed to the scheme geoarchaeologist and Palaeolithic specialist for incorporation into the scheme deposit model, and the provisional results are also taken into account where available in the planning for deeper trial trenches within the detailed WSIs. The implications and recommendations of the military DBA were not available when the first detailed WSIs were written, but have been taken into account in those produced later on.
- 1.1.22 When the detailed WSIs were written, the detailed scheme design was not sufficiently advanced to be sure whether areas within the scheme limits could be preserved *in situ*, but this will be addressed in the revised Project-wide WSI.
- 1.1.23 This Project-wide WSI provides an overview of the known archaeological resource along the line of the scheme, indicates the archaeological aims and objectives appropriate to their investigation by trenching, and sets out the methodology by which LTC's archaeological contractors will implement the requirements for archaeological trial trenching.
- 1.1.24 All work will be undertaken in accordance with local and national planning policies. Details of the relevant national policies are described in the DBA (Highways England forthcoming) and summarised in sections 1.1.4-1.1.6 above. Policies within the Gravesham Local Plan are also relevant, and are also set out in detail in the DBA.
- 1.1.25 All work will also follow the MoRPHE Project Manager's guide (Historic England 2015), and the Code of Conduct of the Chartered Institute for Archaeologists (ClfA). The archaeological works will adhere to the Standards and guidance for archaeological evaluation, excavation and archiving (ClfA 2014a; CifA 2014b), and to the KCC requirements for trial trenching (KCC Manual of Specifications for Archaeological Work in Kent, Part B).
- 1.1.26 The work will be monitored by Highways England, by the Kent County Council County Heritage Conservation service and the Historic England Science Advisor for the South East of England Region. The Historic England archaeological lead for the Lower Thames Crossing project, Will Fletcher, will be copied into all correspondence regarding archaeology with Kent County Council.

1.2 Location, topography and geology

- 1.2.1 The scheme in Kent runs from the bank of the Thames (NGR 567800 174550) on the north to just south of the A2 (NGR 567420 169920), and narrow extensions continue on either side of the A2 for 5km to the west and for 4.2km to the east of this (Fig. 2).
- 1.2.2 To the south and immediately to the north of the Thames the site primarily overlies a sedimentary bedrock of Lewes Nodular Chalk Formation (Fig. 3). There are deep accumulations of alluvium over the chalk to either side of the current Thames within the floodplain of the river. South of this a narrow band of Taplow gravel overlies the chalk, and this is a deposit of known Palaeolithic potential. Beyond this much of the chalk is not overlain by superficial deposits, but in places it is covered by deposits of Thanet Sand Formation, and is cut into by dry valleys containing Head deposits at the base and lower sides. An area of London Clay, Lambeth Group gravels, sands, silts and clays and Harwich Formation silty clays and clayey sandy silts lies in the centre of the southernmost part of the site (BGS 2019).
- 1.2.3 The landscape on the south side of the Thames estuary is characterised by flat, low-lying lands comprising open beaches, mudflats and marshland (the North Kent Marshes). Beyond this the land rises into the North Kent Plain, an area of open and gently undulating land. The North Kent Downs, which rise above the low-lying ground, run along the southern edge of the site. Extensive areas of floodplain are associated with the River Thames, but lie largely in the area of the bored tunnel, and so beyond the scope of this document.
- 1.2.4 The southern end of the scheme is the junction with the A2 between the Marling Cross and Thong Lane junctions, and associated works extend for some distance both east and west alongside it. To the west the extension runs between the A2 and HS1 as far as Tollgate Junction, and north of the A2 along the line of the old A2 (Roman Watling Street) all the way to the Pepper Hill Junction at Springhead. To the east the associated works continue to the west edge of Strood just beyond Three Crutches Junction, and the areas of new landtake are on the north side of the A2, a narrow strip between the Inn on the Lake and Brewers Lane, and a more significant area of landtake north of Three Crutches junction and south of Shorne.
- 1.2.5 From the A2 the line of the proposed route runs north-east between Claylane Wood on the west and Shorne Woods on the east, passing between Riverview on the east edge of Gravesend and Cheney's Farm, Thong, and then crosses the Southern Valley Golf Club (formerly Gravesham airfield). It then turns north, passing between Polperro on the west and Filborough Farm, Chalk on the east. The proposed tunnel entrance is some way south of A226 and the deposits of Taplow Gravel and the alluvium on the Thames floodplain, but given the depth of these deposits, an impact upon the archaeology within them cannot be ruled out. Landuse is mostly agricultural, but includes small areas of woodland (Fig. 4).

- 1.2.6 The route drops gradually from an elevation of around 72m at the A2 junction to just above sea level on the floodplain (Fig. 5). The general slope towards the north is cut by a number of dry valleys. One begins south of the A2 and continues north and then west around the edge of Claylane Wood. There is a lesser valley running west across the scheme south of Thong to join this, and another dry valley is still evident as an open space within Gravesend continuing north from Tollgate Junction.
- 1.2.7 The most significant dry valley within the scheme area runs northwards east of Thong, then turns north-east in the central part of the Kent section of the scheme. Here it is a marked topographic feature known as Southern Valley that runs obliquely to the scheme route, but turns NNE just inside the eastern scheme boundary, opening onto the Thames floodplain 900m east of the route. There are also several tributary valleys running into Southern Valley from the south, crossing the scheme area between it and Shorne Woods. A further couple of dry valleys run northwards across the fields between Chalk and the golf course in the northern part of the central section, the more easterly being followed by the eastern edge of the scheme where it narrows as it descends onto the Thames floodplain.
- 1.2.8 There are no sizeable permanent streams along the line of the route, although the dry valleys presumably provide temporary drainage in times of significant rainfall. The Thames floodplain is criss-crossed by minor watercourses. The nearest major tributary of the Thames is the Medway, which lies 6km to the east.

2 Archaeological Background

2.1 Introduction

- 2.1.1 The archaeological and historical significance of the route was initially set out in the 2017 LTC EIA Scoping Report (HE540039-CJV-GEN-GEN-REP-ENV-00001).
- 2.1.2 Gazetteers and a baseline description of the archaeological resource have been prepared by LTC for the DBA using a study area 1k wide extending outwards from the development boundary (LTC forthcoming). The numbers used in this report are mostly those already issued by LTC, except for scheduled monuments and selected older listed buildings, which use their Historic England numbers. The dataset supplied by LTC includes only a few HER events. Additional gazetteer numbers have been issued for sites discovered during preparation of these WSIs that are not included in the Kent HER. The background provided in this project-wide WSI for trial trenching has also used a background area up to 1km from the development boundary, but has not considered all standing buildings or issues of wider setting. It has however taken into account scheduled monuments and any medieval or early post-medieval listed buildings, and has also referred where appropriate to the wider context of the archaeology of the scheme area.
- 2.1.3 Other than the HER data, several other sources were used in researching the medieval and post-medieval period in the area of the site. The Victoria County History for Kent does not include a volume on the later medieval manors but some of this work was undertaken by the antiquarian Edward Hasted who wrote a county history of Kent in 1797 (Hasted 1797). The Domesday Survey of 1086 (recording ownership of 1066) has been digitised online by the University of Hull (Palmer 2019) and this is a useful resource to determine the size of late Saxon settlements. Ordnance Survey maps were also used in identifying changes to the landscape during the period c.1880-1940. In addition, the tithe maps were looked at for the parishes of Chalk, Shorne, Cobham and Ifield. A number of features were identified from these maps and these are referenced in the medieval and post-medieval sections below.
- 2.1.4 Cropmarks show well on the chalk of much of the central and southern parts of the scheme area, and the data obtained from the survey of the Hoo peninsula has been used in assessing the archaeological resource. A geophysical magnetometer survey of the main scheme route was carried out (Headland 2019), and although there were areas of disturbance, particularly in the former area of Gravesend Airfield, the results over much of the area were good (Fig. 6). A comparison of the cropmark and geophysical survey data was provided in their report (Headland 2019, Illustration 11), and is reproduced here (Figs 7 centre and east and 7 west).
- 2.1.5 A number of archaeological investigations have been undertaken within the area of the scheme and in close proximity. The major excavations are discussed below by area, broadly starting at the northern end of the scheme and moving southwards.

- 2.1.6 In 1970 the Shorne Gas Main (810) was laid across the northern and central part of the scheme, and an archaeological watching brief along the route recorded a concentration of Roman features and finds south of the A226 (Arch. Cant. 85: 1970, 185). In the late 1990s the Shorne to Farningham Gas Main was constructed east of the Shorne Gas Main, and as part of these works three phases of archaeological investigation were undertaken: a fieldwalking survey, a watching brief and an excavation. The fieldwalking survey is published (Network Archaeology 1999) and recorded prehistoric flints within a 40m strip centred on the pipeline running along its length. Network Archaeology also undertook the excavation stage, but the post-excavation was contracted to Engineering Archaeological Services and the report has not yet been completed. Information supplied to the Kent HER indicates that a Roman inhumation cemetery (1816) was found south of the A226 during the 1999 excavation.
- 2.1.7 The central part of the scheme contains two excavated Bronze Age barrows (1362) and (1584). In 1899 George Payne fully excavated a barrow (1362) that was 18.6m in diameter, the ditch being 4.5m wide and surrounding the remnants of a chalk mound. A primary crouched inhumation was found in the centre, and five additional crouched burials in the ditch, two of which were covered by a thick layer of flints. Finds comprised a few fragments of pottery, many animal bones and a worked stone object (Payne 1900, 86-90).
- 2.1.8 Another barrow (**1584**) in the central part of the scheme was identified as a cropmark and was excavated in 1970. This barrow had two concentric ditches, 12.8m and 19.5m in diameter. The inner ditch was c.0.9m wide and 0.3m deep, the outer one varied between 0.9-2.1m wide and from 0.3-1.2m deep. A few fragments of bone and pottery were found in the ditch, but were too small to be dated. The topsoil over the centre of the barrow was stripped but there was no sign of a primary burial. Only two slots appear to have been dug across the ditches (Allen 1971, 226-227).
- 2.1.9 Two major infrastructure projects were undertaken within the southern part of the scheme in the late 1990s/early 2000s. The first was the Channel Tunnel Rail Link Project (CTRL), now known as HS1 (High Speed 1). This rail line was located just south of the A2, and involved archaeological evaluations and excavations that were within, or very close to, the scheme. Directly relevant to the scheme are excavations at West of Northumberland Bottom and West of Tollgate, and evaluations and watching brief at Tollgate, West of Church Road, West of Scalers Hill, Cobham Golf Course and Knights Place Farm (Booth *et al.* 2011).
- 2.1.10 The other major infrastructure project was the A2 Pepperhill to Cobham Widening Scheme (Allen *et al.* 2012), which lay just north of the HS1 (CTRL) works and south of the old A2 (Roman Watling Street). This ran only 60-70m north of the HS1 between Downs Road and Tollgate Junction, and from Tollgate Junction to Church Road the schemes were contiguous. East of Church Road the schemes were again 70m apart, and diverged thereafter as they continued eastwards. Much of the area between the new and old A2 west of Tollgate Junction was subsequently excavated by ASE in creating a Cyclopark (Dawkes 2010). Although recorded in the Kent HER under separate entries, the archaeological results of these three projects are closely related, and those west of Church Road will be described together (Fig. 7 west).

- 2.1.11 West of Tollgate Junction on the plateau overlooking the dry valley the combined excavations revealed a double Beaker burial (3110) and two Beaker pits and a Bronze Age ditch. A small scatter of middle Neolithic struck flint (3079) was found in a hollow midway between this and Downs Road, and further residual Neolithic flint to the east along the line of the A2. An early Bronze Age cremation (3111) was found on the line of HS1 west of Downs Road and east of Pepperhill Junction.
- 2.1.12 North of Northumberland Bottom, and following the highest point along the chalk plateau west of the Tollgate dry valley, a N-S trackway (2446) of middle Bronze Age origin crossed the A2 and A2 Activity Park, passing through a partial Middle Bronze Age enclosure towards the south end, and with late Bronze Age cremations alongside (3112). This trackway was redefined in the late Bronze Age, and continued north of the old A2, where it was excavated at Coldharbour Lane (Mudd 1994). A Bronze Age ring ditch (4060) was found within the A2 Activity Park 160m west of this, and had a crouched inhumation burial in the ditch. Another inhumation and several cremation burials were found in the surrounding area.
- 2.1.13 In the early Iron Age the N-S trackway (2446) was metalled, and early Iron Age pits were found alongside the trackway, including three (3200) with significant quantities of briquetage on the line of the A2. Further early Iron Age and early-middle Iron Age pits were scattered across the landscape to the west of Northumberland Bottom along the line of HS1 and the A2, and beyond Downs Road to the west.
- 2.1.14 West of Northumberland Bottom the HS1 and A2 excavations revealed two significant middle Iron Age boundaries, the western of which was later used for Roman inhumation burials. Scattered middle Iron Age pits (3203) within the A2 Activity Area to the north of this included one with probable briquetage. East of the boundaries was a complex of mid-late Iron Age settlement enclosures and associated pits (3201-3203), continuing as a trackway and enclosed settlement (3115 and 3207 on the A2 and HS1 respectively) into the early Roman period. A continuation of the trackway or part of an enclosure was seen at the west end of the A2 Activity Park.
- 2.1.15 At the start of the Roman period a large Roman enclosure (2447 and 3116) was constructed at West of Tollgate on the edge of the plateau overlooking the dry valley. The north and south ends of this were excavated on the lines of the A2 and HS1, and it contained both settlement and burials, including a group of Early Roman burials of very high status. The continuing enclosure and trackway 500m to the west have already been mentioned. A Roman gravelled road (3117) was found in the dry valley adjacent to Downs Road, along with a corn dryer and fields. A Roman field system (2334) was also recorded on the valley slopes to the north, laid out respecting the large Iron Age boundary ditch.

- 2.1.16 An isolated Saxon sunken-floored building (3143) was found on the chalk plateau between the two Iron Age boundaries, and late Saxon/medieval settlement (3104) including a building within the Downs Road dry valley to the south, east of the Roman road at the valley bottom. Further east, and midway between Downs Road and Tollgate Junction, a medieval settlement of 12th-14th century date was uncovered, consisting of an enclosure (3120) containing a working hollow and ovens (3118) to the south and a network of smaller plots and buildings to the north. A brick clamp (3121) was found several hundred metres to the south-west and this contained bricks dating 1450-1700 AD.
- 2.1.17 On the slope of the valley east of Tollgate Junction, a group of four-post structures possibly of late Bronze Age (1667) date was found just north of the Neolithic mortuary enclosure (1662) on the line of the A2. A group of Iron Age pits was found on the line of HS1 500m further east (3533), south of the start of a dry valley running WNW across the line of the A2. This contained scattered flints of Mesolithic and early Neolithic date (1669), and a monumental, but isolated early Neolithic posthole was found on its north edge at the east end, together with a scatter of Neolithic flint and pits of later Neolithic/early Bronze Age date. Two large flint and burnt flint scatters (1573) that included some later Neolithic/early Bronze Age struck flint were found within the line of HS1 southeast of this, spread over a length of 400m. Much of the material in the scatters was, however, of later Bronze Age date.
- 2.1.18 Just north of the early Neolithic posthole, and on the edge of the plateau above the dry valley, a Middle Bronze Age domestic enclosure (1551) and a metalled trackway was excavated. East of this was a group of early Iron Age pits (1530) and four-post structures, and further Iron Age pits (3534) were found to the south-east within the line of HS1.
- 2.1.19 At its eastern end the A2 included Site H just west of Church Road, Pond C and Site J east of Church Road, Bodley's Yard east of Henhurst Road and Pond D North and Pond D South located either side of the A2. These investigations found Iron Age features (1547, 1520), Iron Age settlement activity (1552), medieval field boundaries (1547), medieval settlement activity (1306) and a possible ritual animal burial of medieval date (1521) (Allen et al. 2012, esp. 560-561).
- 2.1.20 The investigations at Tollgate, West of Church Road and West of Scalers Hill found prehistoric worked flints (1528, 1550), Bronze Age and Iron Age features (1469, 1527, 1529, 1530), a Roman ditch (1329), late Iron Age and Roman gravel roads (1531), medieval agricultural activity (1532), medieval pits and ditches (1313), post-medieval quarries (1470) and a post-medieval brick kiln (1533) (Barclay and Bull 2006).
- 2.1.21 The HS1 Cobham investigations recorded early Bronze Age round barrow (1290), a Late Bronze Age ditch (1291), a Late Bronze Age settlement (1292) and a Bronze Age flint scatter (1293) (Davis and Barclay 2006). The Knights Place Farm investigation found a Late Iron Age/Early Roman ditch (1294) (Garwood 2011, 464).

2.1.22 In 2006 another series of archaeological investigations took place within the most southerly part of the scheme prior to the creation of Jeskyns Community Woodland in 2007. This work took place either side of Henhurst Road and included a geophysical survey, a fieldwalking survey, a metal detecting survey and a trial trench evaluation. The geophysical survey found several linear features, two rectilinear enclosures (3537, 3538), a possible former watercourse and an area of increased magnetic response. One of the rectilinear enclosures and several linear features (3537) were located within the scheme. The other enclosure (3538), outside the scheme to the south, evaluated by trenching, and the enclosure ditch proved to contain early Roman pottery. The woodland planting scheme for Jeskyns was designed to avoid areas of known archaeology, suggesting that the enclosure (3537) within the area of the scheme will have been preserved *in situ* (Canterbury Archaeological Trust 2007, Vols 1 and 2).

2.2 The geoarchaeological background of the Thames estuary

- 2.2.1 The scheme involves not only dryland but wetland environments, most notably on the floodplain and estuary of the Lower Thames. The impact of the scheme on the Kent floodplain is much more limited than on the Essex bank, as the tunnel portal lies beyond the south edge of the floodplain, but a significant impact is still anticipated at the portal where the tunnel rises through the deep sequence of estuarine deposits towards the portal, and there are also ancillary works on the floodplain.
- 2.2.2 In order to understand the distribution of potential archaeological sites in the lower estuary area and the reasons behind major changes in settlement patterns in the past, it is necessary to understand the changing nature of the estuary. Today the estuary is characterised as "tide-dominated" (sensu Dalrymple et al.1992) in which major sandbars occur within the outer estuary area, a marine-dominated zone, and tidal meanders in an inner, mixed energy zone. The LTC scheme lies in the eastern part of the mixed energy zone, which extends c 4-5 km downstream as far as Mucking (Essex) and the Shorne Marshes (Kent) (Bates and Stafford 2013, fig 3).
- 2.2.3 The recent geomorphologic development of the area and the establishment of the modern topography have resulted from major drainage pattern modifications during the Quaternary, and in particular events during the last 500,000 years (Gibbard 1994). The Quarternary deposits and their investigation will be dealt with in the strategy developed by the Palaeolithic specialist Francis Wenban-Smith. Holocene sediments (<12, 000 years BP) within the development area are part of a continuum forming a wedge thickening downstream from less than 2m at Tower Bridge to reach a maximum thickness of 35m east of the scheme area at Canvey Island (Marsland 1986).

- 2.2.4 The Holocene sediments of the Lower Thames consist of complex intercalated sequences deposited in a variety of environments representing variously: freshwater alder carr, fen, reedswamp, intertidal salt marsh and mudflats. The sediments have been grouped by Gibbard (1999) into the Tilbury Member and are dominated by peats and clay-silts in the inner estuary, with marine sands recorded near the Isle of Grain and Yantlet Channel and Sea Reach south of Canvey Island. The basis for subdivision of these deposits was established by Devoy during the 1970s (Devoy 1977;1979; 1980; 1982). His 'Thames-Tilbury' model used borehole stratigraphies integrated with biostratigraphic studies to infer successive phases of marine transgressions (typified by clay-silt deposition) and regressions (typified by peat formation).
- 2.2.5 Devoy's work has resulted in a view of sediment accumulation being controlled within the area by a combination of factors dominated by sea-level change and tectonic depression of southern England. However, more recent work (eg Bates 1999; Bates and Barham 1995; Bates and Stafford 2013; Haggart 1995; Sidell et al.2000; Sidell et al.2002; Sidell and Wilkinson 2004) has highlighted several problems suggesting that the model cannot always be easily applied in terms of lithology or age/altitude analysis, particularly at the scale of a single archaeological site. This is in part a reflection of the complex nature of floodplain environments where sequence accumulation may be influenced by very local factors such as proximity to the terrace edge, the presence of tributaries, islands or 'eyots' and areas of impeded drainage. More recently a simplified (tripartite) regional model for floodplain development was presented by Long et al. (2000). A similar cultural landscape model set out by Bates and Whittaker (2004) examined the likely impact of these changes on human activity and provides a useful framework for archaeological investigation.
- 2.2.6 Over the last two decades a large number of detailed site-specific investigations have been undertaken along the Lower Thames, many in association with developer-funded archaeological work on large infra-structure projects, that are beginning to address the complex range of factors responsible for sequence accumulation. It should be noted however, that much of this work has been focussed upstream within the more sheltered part of the inner estuary in east and central London, along tributaries, or at the margins rather than the deeper parts of the floodplain.
- 2.2.7 Large-scale geoarchaeological investigations located closer to the marine dominated zone, thereby offer valuable comparative data. Adjacent to the LTC in Essex recent projects include the London Gateway Port Development at Shellhaven (Bates *et al* 2012; Biddulph *et al* 2012), the London Distribution Park (Batchelor *et al* 2014), Tilbury Docks (Schulting 2013) and the new port terminal of Tilbury2 (Batchelor and Young 2017). In Kent, in addition to HS1 through the Ebbsfleet Valley (Bates and Stafford 2013) to the west of the LTC, smaller geoarchaeological investigations to the east around Denton include Dalefield Way (Young 2016), the Lion Business Park (Champness 2006, 2007) and the Denton Relief Road (Priestly-Bell 1999, Weaver 2003). These investigations have demonstrated that Holocene sequences in excess of 15m with multiple peat horizons are likely to be preserved in the deeper parts of the floodplain dating back to the early Holocene.

- 2.2.8 The waterlogged floodplain sediments have potential to preserve a range of palaeoenvironmental indicators suitable for high resolution landscape reconstruction in terms vegetation patterns, past hydrological regimes, climate and sea-level studies and past human interactions, when accompanied with a robust chronology provided by scientific dating (eg. radiocarbon and OSL dating). This includes both the organic peat units representing semi-terrestrial environments and inorganic clays, silts and sands deposited in alluvial and estuarine conditions though the study of pollen, plant remains, insects, molluscs, diatoms, ostracods and foraminfera.
- 2.2.9 On the floodplain, the undulating surface of the underlying Pleistocene gravel, a relict feature of the late glacial braided stream systems, may be considered a key archaeological horizon, a buried land-surface dissected by meandering channels, that existed prior to the expansion of wetland environments in the early to middle Holocene. However, semi-terrestrial peats located within the sedimentary stack may also preserved evidence of activity and wetland exploitation, notably intact artefact scatters, burnt mounds and waterlogged wooden structures such as trackways and platforms. Activity associated with estuarine sedimentation may include evidence of local industries such as salt-making, recorded extensively across the marshes in both Kent and Essex and in the vicinity of the LTC.
- 2.2.10 Towards the edges of the floodplain and overlying buried floodplain islands sediment sequences maybe shallower with shifting ecotonal zones (the interface between wet and dry ground) and channel margins acting as a focus for activity. In locations where the underlying gravel surface slopes steeply, such ecotonal zones may have remained relatively static for periods of time before being buried, in such circumstances the potential for multi-period in situ remains to be preserved is high.
- 2.2.11 A document highlighting the Palaeolithic potential of the Quaternary deposits along the scheme has already been completed, and includes a series of transects showing the deposit sequence, incorporating the results of the Geotechnical Investigation programme monitored by Wessex Archaeology. Work on the Holocene deposit sequence has not yet been completed. Borehole data has been examined where available during the preparation of the detailed WSIs, and during trial trenching begins Martin Bates will be informed and consulted should any trenches expose deep sequences of deposits that could be of use in the further development of the detailed deposit model.
- 2.2.12 A number of dry valleys run north, north-west and north-east across the scheme area (Fig. 5). Colluvial (hillwash) deposits contained within peripheral dry valleys and on the sides and at the base of slopes at the floodplain edge, intercalated with alluvium, also have the potential to contain stratified archaeological remains and buried soils. These in particular will prove useful in the preparation of the detailed deposit model.
- 2.2.13 Further borehole logs produced as the GI investigations progress that lie within these valleys will be examined where relevant during trial trenching, and consultation with the scheme geoarchaeologist Martin Bates and Palaeolithic specialist Francis Wenban-Smith will form part of the strategy for trial trench investigation.

2.3 Chronological summary of known archaeology

2.3.1 This summary is accompanied by plots of HER data for the scheme area and the surrounding area. A study area of 1km was chosen for the gazetteer compiled by LTC for the DBA, but within this the particular focus of this document has been upon an area 250m wide either side of the centre line of the route. The HER data has been grouped into the following periods: prehistoric (15000BC-AD43), Roman (AD43-410), medieval (AD 410-AD1540), post-medieval (AD1540-1901) and modern, and Figures 8-12 illustrate the distribution and types of data present for each period. These period plans also show the cropmark and geophysical survey interpretation results, but due to the fact that the dating of many of the cropmarks is only provisional, cropmarks and features interpreted from the geophysical survey of all periods are shown.

Prehistoric (Fig. 8)

- 2.3.2 Late Upper Palaeolithic. The Lower Thames Crossing Palaeolithic and Quaternary Deposit Model (PQDM) and Preliminary Assessment of Archaeological Potential (Wenban-Smith and Bates 2020) outlines the potential for Palaeolithic remains within the scheme and study area in Kent. This potential is for Palaeolithic remains in general (Lower, Middle and Upper) and is not specific to late Upper Palaeolithic remains, which is the only part of the Palaeolithic period covered by this WSI. A brief summary of its findings regarding the rest of the Palaeolithic is given below because of the potential for finding derived Palaeolithic artefacts in later deposits.
- 2.3.3 The area with the highest potential is within the northern part of the scheme and surrounding 1km, just north-east of the village of Chalk around Filborough (PQ-7). This area is located on the lower part of the slope of the North Downs and just above the floodplain. Within this area there are two or possibly three gravel terraces present and deposits of Head within the valley base. There may be a mixture of *in situ* and reworked artefacts and faunal remains within these sequences. This area of moderate-high potential is defined approximately by the Lower Higham Road to the north and the A226 Gravesend road to the south (Wenban-Smith and Bates 2020, PQ-7).
- 2.3.4 The majority of the scheme area in Kent has a low-moderate or uncertain potential for Palaeolithic remains. This area is located on the slopes and upland areas of the North Downs on an area of chalk, sand and clay with ribbons of Head within the valleys. Any Palaeolithic artefacts that may be found within these areas are more likely to be found within the deposits that fill the dry valleys and may not be *in situ*. The areas of low-moderate potential include the central and eastern part of the scheme and surrounding area in Kent including Shorne Woods Plateau (PQ-4), Thong Lane (PQ-6), Thames main floodplain (PQ-9) and Park Pale (PQ-29). The areas of uncertain potential include the areas to the west and south-west of the scheme and surrounding 1km, including the upper catchment of the Ebbsfleet Valley (PQ-3) and Jeskyns shelf (OQ-5) (Wenban-Smith and Bates 2020, PQ-3, PQ-4, PQ-5, PQ-6, PQ-9, PQ-29).

- 2.3.5 No late Upper Palaeolithic material is known within the scheme. Late Upper Palaeolithic knapping scatters (2370, 4045) have however been recorded within the surrounding 1km, along with possible residual/re-worked material (3197, 4035, 4039, 4055). Further west, and more than 1km from the scheme, Late Upper Palaeolithic (long blade) sites have been recorded at Ebbsfleet Green (CgMs 2015), and yet further west in the Darenth valley at Lullingstone Country Park (Anderson-Whymark and Pope 2016). The latter site was found within colluvial slope deposits.
- 2.3.6 **Mesolithic.** Within the northern part of the Kent scheme, a fragment of worked flint (**924**) was found along the eastern boundary of the scheme and just south of the A226. The flint was dated as Mesolithic to Bronze Age. Further south and within the central part of the scheme a few struck flints (**1512**, **1516**) were recovered from fieldwalking of a 50m wide strip along the line of the Shorne to Faversham gas pipeline south of the A226 (Network Archaeology 1999, Appendix 3). A larger assemblage of struck flint was recovered from the watching brief on the gas pipeline, but no further detail is currently available.
- 2.3.7 Towards the south of the scheme two axes (**1588**, **1590**) were recovered within the scheme area, although the provenance of **1588** is uncertain, as it was found within a landfill site north of the A2. The Mesolithic tranchet axe (**1590**) was found in a dry valley just east of the hamlet of Thong, and close to a ribbon of Head Diamicton. A burin and a small number of blades (**1522**) were found during the Pond D excavation just north of the A2, and may be of Mesolithic or early Neolithic date (Donnelly in Allen *et al.* 2012, 52-55).
- 2.3.8 During fieldwalking of Brewers Woods south-east of Thong in 2004 two worked flints of possible Mesolithic date were found within or close to the south-eastern part of the scheme. One of these was a possible microlith (1346), and the other was a flint scraper (1347) (Oxford Archaeology 2004). In 1969, a heath fire exposed a large number of Mesolithic struck flints (1589) on Randall Heath, which is north of Brewers Woods and south-west of Shorne (Arch. Cant. 85: 1970, 184). More recently fieldwalking and test pitting in Shorne Woods Country Park north of Brewers Woods has recorded over 3000 worked flints (1589, 3544, 3545), some clearly Mesolithic. Although not found in situ, a number of flint scatters have been recorded, but most of this material has not yet been published (Mayfield 2012). Within this large assemblage, however, the assemblage recovered from 'The Burnett' (3545) north of the Inn on the Lake and just north of the scheme has been recorded by C Butler, and included microliths, blade cores and blades and bladelets characteristic of the Mesolithic period.
- 2.3.9 Further Mesolithic flints (1329, 1522) were recorded immediately south of the A2, including four flints (1329) of Mesolithic and Neolithic date from the West of Scalers Hill evaluation for the HS1 (CTRL) works. A scatter of Mesolithic flint was also recovered on the line of the A2 from the surface of a dry valley running WNW midway between Church Lane and Tollgate Junction (1669).

- 2.3.10 It has been suggested that colluviation in the chalk downlands may have disturbed any Mesolithic evidence on the higher ground, sealing remains in the valleys below (Reynier 2005, 91). At Lullingstone Country Park, Eynsford, for example, some 15km south-west of the scheme, both Late Upper Palaeolithic and Mesolithic *in situ* scatters were found in slope deposits buried between colluvial Head deposits (Anderson-Whymark and Pope 2016). Similarly, coastal deposits of this period, such as those of Mesolithic to Neolithic peat banks (1383) recorded on the coastline, are likely to be obscured by deep sequences of alluvial deposits. Further Mesolithic evidence may therefore exist within the scheme area, but much of this may be buried by colluvial and alluvial sequences.
- 2.3.11 Neolithic (Fig. 8). No early or middle Neolithic features are known for certain within the area of the scheme in Kent, although a handful of finds have been recorded (688, 1522, 1528) during archaeological investigations associated with the widening of the A2. These, and further quantities of worked flint found within the study area, were recovered primarily from secondary contexts or comprise residual findspots.
- 2.3.12 Within the southern part of the scheme a discoidal Neolithic flint core (1514) was found during the fieldwalking survey for the Shorne to Farningham Gas Pipeline (Network Archaeology 1999, Appendix 3). Just north of the A2 a small number of Mesolithic or early Neolithic flint tools and blades (1522) were found during the Pond D excavation as part of the A2 widening.
- 2.3.13 A possibly Neolithic flake (1679) was found c.50m east of the scheme during a watching brief for a gas pipe in 1994. Two undated pits were also found nearby (1678). Fieldwalking at Shorne Woods 0.5km to the east has also recovered material that may be of early Neolithic date (C Butler unpublished).
- 2.3.14 Four residual sherds of Early or Middle Neolithic pottery were also found within a later ring ditch (1290) at Cobham Golf Course, located 150m south of the scheme.
- 2.3.15 South of the western extension of the scheme a Neolithic mortuary enclosure (1662) sits on the east edge of the Tollgate dry valley between HS1 and the A2 at Tollgate Junction (Allen and Donnelly 2012). Further Neolithic activity was identified along the line of the A2 to the west of Church Road, including a monumental, but isolated, early Neolithic posthole and an adjacent flint scatter (Allen et al. 2012, 9-13). A small scatter of Middle Neolithic flint was found in a colluvial hollow west of Northumberland Bottom on the line of the A2, and residual Neolithic flints and a stone axe were recovered from both the line of HS1 and the A2 east and west of this. North of the A2 Neolithic finds close to a reputedly prehistoric well may indicate activity around a spring, although the finds were apparently moved, and the nature of this material has not been clarified.
- 2.3.16 A Neolithic causewayed enclosure (**731**) is reputed to have existed near Chalk and c.150m north-west of the scheme, although no archaeological evidence of such a monument has been found.

- 2.3.17 Late Neolithic to early Bronze Age (Fig. 8). A significant number of ring ditches are known in the main (central) part of the Kent scheme. Two Bronze Age barrows, (1362) and (1584), both of which were picked up by the geophysical survey (Headland Archaeology 2019), have already been excavated. Barrow 1362 was completely excavated, and contained a primary burial and five further inhumations in the ditch (Payne 1900, 86-90). Ring ditch 1584 was identified as a cropmark, and was partly excavated in 1970 (Allen 1971, 226-227). There were two concentric ditch circuits, both of which were apparently investigated by two slots, but although a few animal bones and scraps of pottery were found, none of the pottery was datable. The interior was stripped, but there was no sign of a central burial.
- 2.3.18 Other potential ring ditches/barrow sites (773, 792, 1362, 1367, 1396, 1393, 1577, 1584, 1595, 1609, 1620, 1813, 3525, 3526 and 3527) have been identified from the NMP cropmark data (Fig. 5). Features consistent with the locations of ring-ditches 1595 and 1813 were also identified by the geophysical survey (Headland Archaeology 2019. Many of these are clearly sited on the edge of the dry valleys that traverse the area, particularly Southern Valley.
- 2.3.19 Another ring ditch (744) was recorded as a cropmark 150m north-east of the scheme. The ring ditch was c.13m diameter and a sub-circular dark patch within the ring ditch may represent one or more pits/grave cuts. A scatter of smaller features was observed to the south-east of the ring ditch and may be further external pits. Some 800m south-west of the scheme, another ring ditch possibly of Early Bronze Age date (1395) was found and partly excavated at Hillside in advance of housing development (Philp and Chenery 1998, fig. 6). Scattered residual Neolithic or early Bronze Age flints were found over the 200m to the east.
- 2.3.20 A scheduled late Neolithic to Bronze Age surviving bowl barrow (**1011011**) is located south of the A2 and just outside the scheme. This barrow measures 26m diameter with a mound 1.8m high and a surrounding ditch. The mound was partially excavated in 1895 and fragments of prehistoric pottery and charcoal were found. A Neolithic worked flint (**923**) was also found nearby and just north of the scheme area.
- 2.3.21 An Early Bronze Age ring ditch (1290) was recorded recorded on Cobham Golf Course c.150m south of the scheme during the HS1 (CTRL) excavations. The ditch was pennanular in plan and was 22m diameter with an opening to the south 2m wide. Fragmentary remains of three urns were found and over 80 sherds of pottery dating to the Early Bronze Age and over 150 worked flints. The pennanular ditch had been truncated making interpretation difficult but it may have been a henge defining a cremation cemetery or it may have been the ditch surrounding a barrow (Davis and Barclay 2006, 7-8). Stripping for HS1 just outside the scheme also revealed a pit (1528) containing Neolithic blades and other struck flints of Neolithic or early Bronze Age date.

- 2.3.22 Flintwork of late Neolithic or Early Bronze Age date (1512, 1516), together with burnt flint, was recovered from fieldwalking of a 50m wide strip along the line of the Shorne to Faversham Gas Pipeline in the central part of the scheme (land parcels 75 and 77) south of the A226 (Network Archaeology 1999, Appendix 3). A probable flint-working site was found during further mitigation of the pipeline, but no further details of the date of the flints are currently available. Field walking was carried out in the southern part of the scheme in advance of construction of the Shorne to Farningham gas pipeline, and five prehistoric worked flints (1303) were found including three dated to the late Neolithic/ Bronze Age (Network Archaeology 1999, Field 4/2: Appendix 3). Scraps of Beaker pottery and struck flints of Neolithic or early Bronze Age date, including a cluster in a colluvial hollow (1547), were found along the line of the new A2 just south of Claylane Wood (Allen et al. 2012, 19 fig. 2.2).
- 2.3.23 In and around the western extension to the scheme area Neolithic to early Bronze Age features have been recorded. Excavation along the line of the A2 widening recovered several late Neolithic/early Bronze Age pits 400m west of Church Road (Allen et al. 2012, 9-13). Two extensive scatters of flintwork and burnt flint (1669) were found along the line of HS1 to the south-east of this, and extended over a distance of 400m up to Church Road. The eastern end of this scatter continues east of Church Road into the site. These scatters included some late Neolithic/early Bronze Age flintwork, though much of the material was possibly later Bronze Age. Just west of the Tollgate dry valley a double Beaker inhumation (3110) and two Beaker pits (2445) were found on the edge of the chalk plateau along the line of HS1 and the A2 respectively. A Bronze Age ring ditch (4060) with a crouched inhumation burial in the ditch was also found within the A2 Activity Park, but was believed more likely to be of middle than early Bronze Age date (Dawkes 2010). Two large assemblages of residual early Bronze Age finds came from later pits on the line of HS1 west of Northumberland Bottom (Champion in Booth et al. 2011, 228), and an Early Bronze Age cremation (3111) was found west of Downs Road and east of Pepperhill Junction.
- 2.3.24 There is a paucity of finds of this period within the low-lying land within the northern part of the study area, although an archaeological investigation within the marshland further west at the Lion Business Park, Gravesend (1510) revealed evidence of late Neolithic to early Bronze Age activity within the lower alluvial sequence. Given the scattered character of later Neolithic and early Bronze Age pits found along the line of HS1 and the A2 widening, it is likely that further settlement evidence of these periods exists between the monuments, and that some activity will be discovered buried beneath colluvial and alluvial deposits in the northern half of the site south of the Thames, where peat deposits likely to include those of Neolithic date have also been identified. While the extent and duration of marine transgressions varies within the Thames estuary, it is likely that conditions suitable for occupation were not present for some part of this period on the Thames floodplain, although it may well have been visited for other wetland activities.
- 2.3.25 The later Bronze Age and Iron Age (Fig. 8). The archaeological record of the later prehistoric period comprises the remains of domestic occupation and associated areas of agriculture, scattered burials and specialized activities such as salt-working.

- 2.3.26 Known Middle and late Bronze Age activity within the scheme. Within the central part of the scheme over 20 worked flints (1514) were recorded during the 1999 fieldwork survey and were tentatively dated to the mid to later Bronze Age. In addition, over 10 worked flints and over 50 pieces of burnt flint were collected from the same field but these could only be dated as prehistoric (Network Archaeology 1999, Appendix 3).
- 2.3.27 Archaeological investigations associated with the A2 improvements and the HS1 works identified several areas of later Bronze Age settlement activity across the south of the scheme. Excavation at Pond D north during the A2 widening within the southern part of the scheme recovered a scatter of 437 worked flints (1522), many of which were dated to the middle and late Bronze Age. A few similar flints were recovered from Pond D south adjacent to the Cobham service station on the south side of the A2 (Allen *et al.* 2012, 52-55).
- 2.3.28 Further east, construction of HS1 revealed a Middle to Late Bronze Age settlement (1292), a Late Bronze Age ditch (1291) and a Bronze Age flint scatter (1293) c.150m south of the scheme within Cobham Golf Course (Davis and Barclay 2006). A findspot of Bronze Age copper alloy casting waste (1005) was recorded further west c.100m south of the scheme, and a Bronze Age pit (1286) just east of Cobham Junction on the line of HS1 (Booth *et al.* 2011, 462). A large late Bronze Age pit (1529) containing Late Bronze Age pottery and perforated clay slabs, and interpreted either as a well or a clay extraction pit, was found on the line of HS1 opposite Claylane Wood. A socketed bronze axe has also been recovered from west of Cobham, but the location is not recorded in any detail, and this may have been more than 1km from the limits of the scheme.
- 2.3.29 **Bronze Age activity in the western extension**. Fieldwalking west of Church Road found two scatters of both later prehistoric struck flint and burnt unworked flint. These scatters extended over a length of 400m, and the eastern limit lay just east of Church Road. Both of these scatters lie within the scheme area, below and to the north of HS1 (1550), though most of this area was stripped during construction of HS1. The area was subsequently evaluated, and two Bronze Age pits and a possible post hole (1469) were recorded west of Church Road. Shallow gullies interpreted as field boundaries containing Bronze Age and possibly early medieval pottery were attributed to the Bronze Age because of the Bronze Age pits nearby, the later pottery being interpreted as intrusive. A Bronze Age pit (1527) was also found adjacent, west of Church Lane and just outside the boundary of the site.
- 2.3.30 On the very edge of the western extension to the scheme, and west of these surface scatters, a middle Bronze Age enclosure (1551) was found during the construction of the new A2 (Allen et al. 2012, 22-34). This had a cobbled trackway on the south-east and internal features including a possible roundhouse. Further to the west, and on the eastern slope of the Tollgate Junction dry valley, a group of four-post structures (1667) was uncovered on the line of the new A2, and although there were no finds, radiocarbon dating suggested a late Bronze Age date for at least some of these.
- 2.3.31 **Known Iron Age archaeology.** Excavations in advance of the Shorne-Faversham Gas Pipeline south of the A226 in 1999 found pits, ditches and gullies of Iron Age date (**1816**) within the north-eastern part of the site, though no further details are currently available.

- 2.3.32 The Kent HER recorded a series of cropmarks (1397) just outside the scheme at Hillside on the west as Bronze Age, but when part of this complex was excavated in advance of development at Hillside, a late Iron Age/early Roman settlement (1597) was recorded (Philp and Chenery 1998). The site comprised a complex of trackways, enclosures, pits and four-post structures, and cropmarks show that this continues into the western edge of the scheme.
- 2.3.33 In 1982 an excavation was undertaken just outside the scheme east of Thong Lane prior to landscaping to create a sports field for the Thamesview School. This rescue excavation found a significant amount of occupation debris, a 7.5m diameter ring ditch, two or three hearths, late Iron Age pottery, an assemblage of animal bone, a fragment of human bone, a loom weight and a bronze brooch Iron Age activity was found (1579). This site is unpublished and the Kent HER holds the only information. Just north of the A226 and north-west of the scheme, the excavation of a housing development east of Chalk revealed a ditch of 1st century AD date, possibly very late Iron Age. This site later developed into a Roman villa (1447) (Johnston 1972, 112-5).
- 2.3.34 A field boundary of Late Iron Age/Roman date (1294) was also recorded at Knights Place Construction excavation located 200m south-east of the scheme as part of the HS1 works (Garwood 2011, 464).
- 2.3.35 A particular concentration of later prehistoric metal finds (832, 835, 849, 856, 921, 932, 1052, 1053, 1175, 1200, 1212), including copper alloy, silver and gold Iron Age coins and a bronze bucket, are recorded just south of the A226 on the north-western slope of the dry valley and in the vicinity of the trackway just within the north-east limit of the central section. The geophysical survey here shows one major sinuous ditch running north from the trackway, and lengths of curving ditch possibly representing enclosures on either side, as well as a concentration of possible discrete features. This may indicate an unenclosed later prehistoric settlement, perhaps similar to that found west of Tollage on the A2 (Allen et al. 2012). Less than 100m to the west there are rectilinear enclosures south of the A226 (Headland Archaeology 2019, fig. 18). The number of prehistoric metal objects is significant, and appears to indicate a particularly important later prehistoric focus at this location, although its nature is as yet unclear.
- 2.3.36 Iron Age activity in the western extension. Excavations for HS1 and the adjacent new A2 revealed several groups of Iron Age pits (3533, 1530 and 3534). The westerly cluster of pits (3533) were located c.200m south-west of the scheme. The central cluster of pits (1530), which was re-excavated below the line of the new A2, also included two four-post structures and a boundary ditch, and lies within the western extension of the scheme (west of Church Road). These pits contained pottery and briquetage transport containers, and one pit contained a near complete La Tène I brooch dated to the 4th to 3rd centuries BC. The third cluster of pits (3534) lay 140m south of 1530, some 60m south of the scheme (east and north of Church Road).

- 2.3.37 During the A2 widening work a NNE-SSW aligned trackway, several pits and four postholes in a rectilinear alignment (1547) were identified north-east of pit group 3534. These features contained later prehistoric pottery, some of which was dated to the Iron Age (Allen et al 2012, 188-190). A ditch of Iron Age date (1520) at Singlewell north of the scheme in this area may have formed part of a field system. A complex of cropmark enclosures likely to be of Iron Age date is recorded 350m north of the old A2 at Singlewell (1414, 1593), but was apparently largely built over without record. The western end of this complex may still survive in an open space.
- 2.3.38 An extensive area of cropmarks has been recorded by the HER just south of Tollgate junction (1653-1656, 1660, 1670). This complex includes linear features, possible trackways, rectilinear and curvilinear features. The date of these features is unknown but is likely to represent a settlement of later prehistoric/Roman date.
- 2.3.39 To the west of Tollgate Junction, and south of the scheme excavations in advance of HS1, the new A2 and the A2 Activity Park revealed activity of every phase of later prehistory. North of Northumberland Bottom, and following the highest point along the chalk plateau west of the Tollgate dry valley, a N-S trackway (2446) of middle Bronze Age origin crossed the A2 and A2 Activity Park, passing through a partial Middle Bronze Age enclosure towards the south end, and with late Bronze Age cremations alongside (3112). This trackway was redefined in the late Bronze Age, and continued north of the old A2, where it was excavated at Coldharbour Lane (2280) (Mudd 1994). A Bronze Age ring (4060) ditch, believed by the excavator to be of later Bronze Age date, was found within the A2 Activity Park 160m west of this, and had a crouched inhumation burial in the ditch. Another inhumation and several cremation burials were found in the surrounding area.
- 2.3.40 In the early Iron Age the N-S trackway was metalled, and early Iron Age pits (3200) were found alongside the trackway, including three with significant quantities of briquetage on the line of the A2. Further early Iron Age and early-middle Iron Age pits were scattered across the landscape to the west of Northumberland Bottom along the line of HS1 and the A2, and beyond Downs Road to the west.
- 2.3.41 West of Northumberland Bottom the HS1 and A2 excavations revealed two significant middle Iron Age boundaries, the western of which was later used for Roman inhumation burials (3204). Scattered middle Iron Age pits within the A2 Activity Area to the north of this included one with probable briquetage (3203). East of the boundaries was a complex of mid-late Iron Age settlement enclosures and associated pits (3201-3203), and a pair of high status late Iron Age cremation burials was found within this complex along the line of the new A2. The southernmost of the enclosures, together with a trackway leading north (3115 and 3207 on the A2 and HS1 respectively) continued in use into the early Roman period. A continuation of the trackway or part of an enclosure was seen further north at the west end of the A2 Activity Park.

- 2.3.42 Cropmark enclosures of varying sizes are frequent in the central and northern parts of the scheme and in the surrounding area have been interpreted as later Bronze Age or Iron Age in date. Three are sub-circular enclosures (1604, 1608, and 1619), and another enclosure is sub-rectangular (775). Several other rectilinear arrangements of ditches (791 and 1602) and one circular feature (1396) have also been similarly interpreted, although 1396 is as likely to be a ring ditch of earlier date. Enclosures consistent with the locations of 1608 and 1619 were also identified by the geophysical survey, and less clearly at 1602 (Headland 2019; Fig. 5a). Another enclosure (1814) was identified by the geophysical survey north of the A226 and this may be later prehistoric or Roman in date. Two further enclosures (2259, 2260) were recorded by the NMP either side of the A226 near Higham (Figs 6 and 7). The majority of these settlements are sited on the higher ground between, or at the edge of, the dry valleys that traverse the area.
- 2.3.43 A cropmark including a sub-rectangular enclosure located east of Church Road and round 220m south of the scheme (1594) is tentatively ascribed to the Iron Age. The western part is overlain by a series of parallel cropmarks interpreted as medieval or post-medieval lazy beds. Lazy beds are closely spaced agricultural furrows with steep banks.
- 2.3.44 The cropmark of a possible enclosure (**3546**) was identified just north of the A2 within the eastern extension to the scheme. The cropmark is rather indistinct, and may well be geological in origin, but if genuine, may represent a later prehistoric enclosure.
- 2.3.45 A ploughed-out, figure-of-eight enclosure (2259) has been identified as a cropmark just under 1km north of the east end of the scheme, in an open field midway between Shorne and Highham. This probably consists of two joined enclosures, and sits above a dry valley, so may well be of later prehistoric date.
- 2.3.46 There are several possible later prehistoric trackways within the northern part of the scheme (703, 674 and associated branches) which were identified by the geophysical survey, and numerous metal finds of Iron Age date have also been recorded in this area. Trackway 703 may have continued as 796 to the south, ending at linear ditches 791, and associated with it, or adjacent to it, are a number or rectilinear or sub-rectilinear enclosures (1372, 1391, 1390, 794). 1391 was considered to be later prehistoric by the HER, and some of these other enclosures may also be, though they could also be of Roman or later date. A similar small rectilinear enclosure (1607) sits adjacent to another linear boundary (787) that runs towards enclosure (1619), and this complex of features may also prove to be of later prehistoric origin. Isolated rectilinear enclosures or part enclosures (1601 and 774) may also be later prehistoric or Roman in date.
- 2.3.47 Arcs of ditch at the south end of the site (773, 1367) and on the west (1605), together with a possible incomplete enclosure (1622), may also represent later prehistoric settlement. A number of other linear cropmarks (778, 779, 798) and a cluster of pits (675) in the north-western part of the site may be associated with later Bronze Age and Iron Age activity, as may large pits (793) within ditched enclosure 791.

2.3.48 There is an absence of later prehistoric evidence within the floodplain of the River Thames to the north. Archaeological investigations through alluvial sequences within the wider study area have revealed evidence of Neolithic to early Bronze Age activity (1510), indicating that the area was conducive to settlement during this period, but within later prehistory there are believed to have been sea level changes that led to marine transgressions, and these may have changed the nature of activity to wetland activities. The current lack of evidence is probably largely due to the effects of masking by later alluviation on the Thames floodplain and the lack of archaeological investigation. Evidence of activity is thus likely to exist buried by deep alluvial sequences, although it is just possible that some of the undated salterns (1517) that are recorded by the HER on the floodplain east of the route could be of later prehistoric date.

The Roman period (Fig. 9)

- 2.3.49 Certain evidence of Romano-British activity within the scheme and close proximity to the scheme appears to be concentrated within two main areas. The northern cluster of activity is located either side of the A226 and the southern cluster alongside the line of the old A2 (Roman Watling Street) (1680). Other activity has also been recorded on the slopes of the downs within the central parts of the scheme and on the plateau of higher ground within the southern part of the study area.
- 2.3.50 An area of Roman settlement (1409), recognised initially from cropmarks and also confirmed by geophysical survey, lies immediately south of the A226 Rochester Road and south of St Mary's church. The cropmark and geophysical survey evidence shows two linked square enclosures on the west, each one consisting of a main enclosure surrounded by parallel outer ditches. The north-east side of the larger inner enclosure is visible, but the possible return of the outer enclosure probably lies beneath the A226. The south-east side of the smallest enclosure is visible, but that of the larger inner enclosure is obscured on the geophysical survey by disturbance from a gas pipeline.
- 2.3.51 East of these are various smaller curvilinear cropmarks and possible discrete features, which it was suggested above may have been Iron Age. All of these correspond to a substantial concentration of Romano-British artefactual evidence, comprising numerous late Roman coins and other metal findspots, together with ceramic building materials (see Fig. 9 inset A). A gas pipeline passed through this area in 1970, and confirmed an extensive area of Roman features (Arch. Cant. 1970, 185).
- 2.3.52 East of this further ditches forming possible enclosures and a trackway were evident from cropmarks and geophysical survey, and fieldwalking in advance of the Shorne to Faversham Gas Pipeline, which passes through this area, retrieved more Roman pottery and tile (1513) (Network Archaeology 1999). The excavation that followed found Iron Age and Roman ditches, gullies and pits, cobbled surfaces and a Roman cemetery of inhumations and cremations (1816). The evidence indicates a significant and well-preserved Roman settlement that may include one or more buildings.

- 2.3.53 On the north side of the A226 just a little further east, and just beyond the limits of the scheme, a trackway (786) is recorded on the HER running parallel, and this may represent either a medieval or even a Roman precursor to the modern road. If Roman, the trackway is heading towards Chalk, where a villa or shrine with a hypocausted room and a cellar (1447) is known from excavations only 85m from the western edge of the scheme (Allen 1959; Johnston 1972). Occupation here appears to have begun either in the very late Iron Age or early Roman period.
- 2.3.54 Within the northern part of the study area further findspots include Romano-British urns and a fibula brooch (1591) and a samian vessel (1592). Three pieces of late Roman pottery with graffiti (1581) were also found c.150m north of the A226 to the east, and further in this direction another cluster of Roman finds have been recorded just south of the A226 and Higham at Gads Hill. The latter is likely to indicate the site of another Roman settlement. The cluster of Roman activity alongside the A226 strongly suggests that this originated as a Roman road running south-east towards the Roman settlement of *Durobrivae* (Rochester).
- 2.3.55 North of the A226 and outside the scheme north-east of East Court Farm, quarrying in the 20th century destroyed a further area of Roman activity, from which three kilns (1610) were recorded and others destroyed without record (Allen 1954; 1959, 220). A late Roman cemetery also lay in this area (664), from which nine burials were recorded. A fourth kiln was later found during excavation of a gas pipeline (Arch. Cant 1970, 185).
- 2.3.56 Very little Roman archaeological evidence is recorded within the low-lying marshland that lies to the north, although a number of possible salterns (1517), are recorded on the floodplain between 250m and 1km to the east. One of these, cut through by a gas pipeline at a depth of 2' in 1970, was tentatively associated with Roman pottery (Arch. Cant. 1970, 185); the others are all undated. Given the later prehistoric and Roman evidence for salt-making from sites further inland, it would be surprising if Roman salterns did not exist in the vicinity of the scheme. A substantial ditch (1576) consistent with the border of the marshland marks the northern extent of recorded features of this period within the vicinity of the scheme.
- 2.3.57 A cropmark complex (1397) on the west side of the scheme, and located mostly outside it, was excavated at Hillside south of Riverview, and a late Iron Age and early Roman settlement (1597) was found. The settlement continued in use into the 2nd century AD, and a trackway and at least one enclosure belonging to this extends into the north-west corner of the site (Philp and Chenery 1998).
- 2.3.58 Several Roman finds have been recorded by metal detecting within the central part of the scheme, including a Roman coin of Valerian II (AD 255 AD to 258) (872) and a later 2nd century disc brooch (873), both within Land Parcel 86 (Fig. 12). A Roman coin (947) of Magnentius (350-353 AD) was also recorded by metal detecting in Land Parcel 83. A brass coin (1394) of Constantius (early 4th century) was also found c.50m east of the scheme and close to the rectilinear enclosure 1601. A late 1st century flagon (1466) was found c.150m west of the scheme during building works. These finds spots suggest mid to later Roman activity across an extensive area. Another Roman coin (947) was found within the eastern part of the scheme.

- 2.3.59 Other evidence of Romano-British activity within the main scheme area comprises cropmark features, trackways and findspots. Cropmark features including enclosures (701, 794, 1534, 1601, 1603, 1607), interpreted as areas of Romano-British settlement activity, are focused toward the centre of the scheme, and all of these were also identified by the geophysical survey (Headland 2019). Initial trial trenching for the scheme has tested enclosure 1607 and confirmed a Roman date. Cropmark features 701, 794 and 1534 are not far removed from one another, and may belong to one focus of settlement. Burials, one central and four in the ditch, excavated from a nearby Bronze Age barrow (1362) are described in the HER entry as Roman, although the detailed description suggests that the burials in the ditch were prehistoric.
- 2.3.60 In addition, two rectilinear enclosures (1600 and 1820), the former with additional external features (1817), the latter with internal features, were recorded from cropmarks and geophysical survey respectively further south in Land Parcel 80. These enclosures may be Roman in date or they could date from the later prehistoric period.
- 2.3.61 Cropmarks of possible field boundaries (778, 788, 1465) on the slopes of the downland suggest that at some point this area was in agricultural use. Although described by the HER as medieval, a sinuous trackway (787) on a NNE alignment runs past enclosure 1607 and a branch runs off further south to the complex represented by 701 and 794. It is therefore possible that this medieval trackway has its origins in the Roman period. Two trackways (677 and 1819) and a field boundary at right angles (762) north of Claylane Wood, and within Land Parcel 81, may be continuations of the late Iron Age/early Roman settlement at Hillside (1597).
- 2.3.62 The route of Roman Watling Street (1680) ran below, or close to, the modern route of the A2 through the southern part of the site. Part of the Roman road was exposed in the 1920s, and a section of this Roman road (3456) was found beyond the west end of the scheme during the HS1 works at Springhead, although no trace of the Roman road was found south of Gravesend during the 21st century improvements.
- 2.3.63 An area of settlement (1524) was excavated during the A2 widening at Henhurst adjacent to Watling Street on the north side (Allen *et al.* 2012, Pond D north), and this was certainly active in the early Roman period. An area of indistinct earthworks (1515) was noted immediately to the west, and a geophysical survey to the east revealed a ditch (1821) running parallel to Watling Street, with a subdivision running between them. These may be unrelated to the activity found in Pond D, but ditches from this certainly continued both west and eastwards, suggesting that further Roman activity will be found on either side (Land Parcels 80, 84 and 98). A 19th century account states that a mass of human bones and artefacts including weapons (1599) was found in a ditch and bank that was levelled in Claylane wood. The account suggests that this was the site of an encounter between Romans and Britons, although the HER records this as an Anglo-Saxon cemetery, and more recently as possibly of late Bronze Age date.
- 2.3.64 Some 300m further south, Late Iron Age/early Roman activity (1329) was found south of the A2 in the West of Scalers Hill HS1 evaluation. (Oxford Archaeology 1998), and comprised three substantial ditches, two gullies, a posthole and a small pit.

- 2.3.65 Further west, geophysical survey found two sub-rectangular enclosures in Jeskyns Community Woodland south of the A2 and opposite Claylane Wood, one (3537) on the very edge of Land Parcel 88, the other (3538) 200m south of the scheme limits. Trial trenching showed that the southern enclosure was of early Roman date, and the other enclosure, from which a boundary extends north into the scheme area, may also be of Iron Age or Roman date. North-west of this and south of Marling Cross Junction, stripping for HS1 exposed a trackway orientated north-south and a metalled road running east-west on either side of Henhurst Road (1531). There were also scattered other ditches and pits. Both elements of this road continue into the area of the scheme.
- 2.3.66 Further to the east was the scheduled Roman villa at Cobham (1012964), north of the existing Cobham Park buildings and less than 200m south of the scheme. A field boundary of late Iron Age/Roman date (1294) was also recorded 200m south-east of the scheme. A number of Roman finds have been recorded from around the southern part of the scheme, including four Roman coins (627, 881, 979, 1008), two Roman brooches (626, 831) and a copper alloy lid in the shape of a bird (840). Further clusters of Roman finds have also been recorded further south, east of Instead Rise and south of Cobham. It is possible these finds may be associated with further Roman settlements.
- 2.3.67 The western extension to the scheme contained further activity close to Watling Street. At the start of the Roman period a large Roman enclosure (2447 and 3116), subdivided into a number of smaller enclosures, was constructed at West of Tollgate on the edge of the plateau overlooking the Tollgate Junction dry valley and Watling Street. This contained three high-status 1st century burials and occupation and burials of 2nd and early 3rd century date. Some 500m further west part of the mid-late Iron Age settlement survived into the early Roman period, consisting of one or more sub-rectangular enclosures and a trackway (3115 and 3207 on the A2 and HS1 respectively) into the early Roman period. A continuation of the trackway or part of an enclosure (3207) was seen at the west end of the A2 Activity Park. Further Roman burials were found in the sub-rectangular enclosure, and others in the top of a major Iron Age ditched boundary to the north-west (Allen et al. 2012), while an unenclosed cremation cemetery was found north of this again in the A2 Activity park (Dawkes 2010), and close to the line of Watling Street.
- 2.3.68 A metalled Roman road (3117) was also recorded further west in the Downs Road dry valley during the HS1 excavations, along with a corn dryer and a field system (2334) that extended up the northern side of the valley to the major Iron Age enclosure boundary, which was still visible as a hollow. These features may have been constructed in the early Roman period, and were in use until the mid-4th century.

- 2.3.69 On the west the scheme ends just short of the scheduled Springhead Roman site (1005140), located both south and north of the A2. Springhead, known as Vagniacae in the Roman period (1999), was initially excavated in the 19th and early 20th century when a walled cemetery (3464), Roman baths and a kiln were found. The walled cemetery (3464) is also scheduled (1004226). In the 1950s-1963 the Ministry of Works conducted a small excavation and found a temple complex dating from the late 1st to early 4th century AD (2325). Subsequent excavations in the 1990s for cable trenches across the Springhead scheduled monument and as part of the HS1 excavations found a wealth of further Roman activity in the vicinity.
- 2.3.70 The majority of the Roman gazetteer entries shown in the western part of the study area (Fig. 9b) relate to the findings from the 1990s Springhead excavations. In summary, the excavations confirmed that there was a ceremonial site at Springhead at the head of the River Ebbsfleet. This settlement (1999) was founded in the late Iron Age period around 100BC and continued in use until the 4th century. The site contained a large number of temples along with domestic houses and industrial buildings (Wessex Archaeology, 2020). A large early to middle Roman cemetery at Pepper Hill (3353) located 0.5km south of Springhead and close to the first temple to be found and the walled cemetery, was also associated. Further north a Roman villa (HER TQ 67 SW 38) with a waterfront was found at Northfleet, and dates from the 2nd to the 4th century AD.

The Medieval period (Fig. 10)

- 2.3.71 There is limited evidence of early medieval activity within the scheme and the surrounding 1km. Within the northern part of the scheme, early medieval metal finds, have been recovered from south of the A226 close to St Mary's Church, which is possibly the site of a late Saxon church (see below). There are two finds, one (1114) specified as late Saxon due south of the church, the other (848) dated only as Saxon, 100m further south-east. The presence of these metal objects may indicate pagan Anglo-Saxon burials, or settlement activity, within the vicinity. This is the area that appears to have been a significant later Roman settlement, and Anglo-Saxon settlement or burials on such sites is not unusual. Alternatively the finds could be related to the church, or could possibly only be chance losses by travellers between Gravesend and Rochester.
- 2.3.72 The Grade II* listed Church of St Mary (1089044), the parish church of Chalk, has late 11th century elements, and this makes it likely that this is the church recorded in Domesday, suggesting that it may be located on the site of an earlier, pre-conquest church. It is likely that there was formerly a settlement around the church, and the Saxon metal finds may indicate that this lay to the south close to the A226, particularly if this was in origin a Roman road. A penny of Coenwulf was, however, also found at East Court Farm 100m east of the scheme to the north of St Mary's Church, and may instead suggest that the Saxon settlement was located north of the church, along Church Lane. Two late 8th century Saxon silver coins (1548, 1549) were also found c.200m north-west of the scheme and adjacent to the A226.

- 2.3.73 Just north of the A2 a probable waterhole (1523) was found during the excavation of Pond D north, and was radiocarbon-dated to the 5th century AD (Allen et al. 2012, 488-491). To the west of this, a possible Anglo-Saxon burial ground (1599) is believed to be located within Claylane Wood, an area of ancient woodland north of the A2 and just outside the west side of the main scheme corridor. Finds of human remains and associated grave goods were recovered during the slighting of a bank and infilling of a ditch. This burial ground was located 0.5km north-west of the later medieval settlement of Henhurst Dale (1306) and 0.5km north-east of the current hamlet of Henhurst. Along the western extension to the scheme an isolated Saxon sunken-floored building (3143) was found on the chalk plateau between Tollgate Junction and Downs Road during the A2 improvements, and a settlement (3104) that probably started in the Late Saxon period, including a building, was found to the south in the Downs Road dry valley.
- 2.3.74 The Domesday Survey (1086) indicates that there may have been two late Saxon settlements located in close proximity to (or within) the scheme, at Chalk and Henhurst. The settlement of Henhurst was small with only 6 households and one ploughland whereas Chalk had 24 households, 7 ploughlands, 16 acres of meadow, one mill and one church (Palmer 2019). The precise location of these settlements is unknown although they are likely to have been located in the vicinity of the modern village of Chalk and the hamlet of Henhurst. As recorded in the survey, these settlements appear to have been well-established, and may have been founded before the Norman conquest in AD1066.
- 2.3.75 In the later medieval period the northern part of the scheme area was situated within the parish of Chalk and the southern parts within the parishes of Shorne, Cobham and Ifield. The western extension to the scheme and its surrounding area was in the parishes of Northfleet and Southfleet and the eastern extension to the scheme also continued into the parish of Higham. The last three parishes will not be discussed in detail as there is limited intrusive work taking place in these areas. The medieval activity that has been found close to the scheme in Northfleet is discussed briefly at the end of this section.
- 2.3.76 The parishes of Chalk and Shorne both have an elongated shape with access at the northern end to the Thames foreshore. These parishes also incorporate an elevated area of land either side of the A226 Gravesend road which sloped northwards towards marshland and the coastline. The elevated ground was historically used for arable farming whilst the marshland was used for seasonal pasture. As mentioned previously, Chalk had a Saxon foundation and Shorne was partly owned by the Crown during the later medieval period. The inland parish of Ifield was in existence by the late 12th century and Cobham originated as a later medieval estate (Hasted, 1797). The features and finds that have been recorded in the parishes of Chalk, Shorne, Cobham and Ifield sometimes cross parish boundaries and so occur within several parishes, and these are noted below.

Parish of Chalk

- 2.3.77 In the late 11th century the manor of Chalk was split into two, East Chalk and West Chalk. During the 13th century the manor of East Chalk was owned by John de Burgh who gifted it to the monks of the priory of Bermondsey, in Southwark. The manor reverted to the crown several times until it became part of the Cobham estate in the 17th century. The manor of West Chalk was owned by the Neville family until it also became part of the Cobham estate (Hasted, 1797). There were two further medieval manors within the parish of Chalk, called Raynehurst and Tymberwood, which had two estates within them known as Fel borrow (later Felborough) and Clam-lane, and these were also part of the Cobham estate (ibid.). It is possible that the site of the medieval manor house of Felborough was Filborough Farm, which is located adjacent to the site on the north-east (Figs 2 and 10).
- 2.3.78 The extent of the medieval manors of East and West Chalk are suggested by a map dated 1759 showing outlying portions of the Cobham Hall estate, held in the Medway Archives (U565/P7). This map shows that the manor of West Court (West Chalk) extended eastwards within the scheme to a field boundary (3528) which began at the Gravesend Road and continued south then south-west to Thong Lane. The northern part of this boundary is still extant and is preserved within the scheme as a raised bank. The western extent of the Manor of East Chalk is shown on the 1759 map as a roughly north-east to south-west aligned road (787) located south-west of St Mary's Church within the scheme. The Chalk Tithe map of 1840 suggests that part of Philborough Farm may have been located between the Manor of West Court and East Chalk (Fig. 10 between 3528 and 787).
- 2.3.79 A further extant field boundary (3529) located 0.5km south-east of 787 marks the parish boundary between the parishes of Chalk and Shorne and also the former eastern boundary of the manor of East Chalk (Figs 7 and 10). This boundary is also shown on a road on the 1759 map and as a trackway on the Chalk Tithe map of 1840.
- 2.3.80 The medieval settlement of West Chalk most likely lay beneath the modern village of Chalk and adjacent suburbs of Gravesend. The medieval settlement of East Chalk was probably located in the vicinity of St Mary's Church, whose earliest standing masonry is contemporary with the time at which the manors were divided. A cluster of findspots (862, 965, 966 and 1097) dating from the 13th-16th centuries have been recovered from south of the A226 Rochester road and c.200m south of St Mary's Church, in the same vicinity as several earlier medieval findspots. These findspots may indicate the location of a linear roadside settlement or farmstead associated with St Mary's Church, the lost East Chalk settlement.

- 2.3.81 Further settlement activity may have been located north of St Mary's Church along Church Lane. A possible trackway or field boundary was recorded by the NMP linking the church with East Court to the north and continuing towards the Higham Road (Fig. 6; Fig. 7a). This possible boundary or trackway (795) is located c. 200-300m east of the scheme, and if it were a trackway, may have been the focus for medieval settlement activity. The medieval manor house of East Court may have been located in the same area as the post-medieval East Court Farmhouse (1089045) located c.200m east of the scheme; the date of origin of East Court farm (Fig. 10) is not known, as the Kent VCH does not deal with the medieval manorial history, and only limited information is available from Hasted's History of Kent, Parishes: Chalk (Hasted 1797). A medieval well was found outside the scheme limits north-east of East Court Farm (Allen 1954, 154-5). Later medieval finds have also been located either side of the A226 (669 in the parish of Chalk), (1170 and 1625 in the parish of Shorne) although these isolated finds might be have been lost or discarded by travellers on the road.
- 2.3.82 A further field boundary some 0.5km south-east of 787 marks the parish boundary between Chalk and Shorne (Fig. 7). A linear cropmark feature (804) at the western edge of the site may have been a medieval trackway. Three linear field boundary banks (803) were observed as cropmarks within the north-western part of the site, and as only the most northerly appears on the Chalk Tithe map of 1840, these are all likely to be earlier, and could be medieval in origin.
- 2.3.83 Several salt works (salterns) (1368, 1369) are recorded within the marshlands to the north close to the scheme boundary, and others more widely to the east (1517). Examples of investigated salterns within the salt marshes in Essex have been dated to the Roman period, but others of medieval date are also known on both sides of the Thames, and it is possible that those close to the scheme in Kent are also of this date. Ridge and furrow earthworks (1371) have also been recorded within the marshland. The presence of these earthworks, which are typical of medieval and/or post-medieval agricultural techniques, are indicative that areas of the marshland were suitable for cultivation within the medieval or post-medieval periods.

Parish of Shorne

- 2.3.84 The central and eastern part of the scheme and study area were situated within the parish of Shorne, which is shaped like an inverted L, with a western projection around the hamlet of Thong. The eastern part of the parish extends further north to the Thames foreshore and the western part, in which the site is situated, abuts the parish of Chalk to the north. The parish of Shorne extended as far south as Roman Watling Street (1680). The parish of Shorne slopes northwards towards marshland and the coastline. During the medieval and postmedieval period the elevated ground along the slopes of the North Downs in this area was historically used for arable farming whilst the marshland to the north was used for seasonal pasture. The settlement of Shorne, located east and north of the site, was probably founded by the 13th century at the latest, as the parish church of Saints Peter and Paul (1083891) dates from this period. The church of St Peter and Paul in Shorne is Grade II listed (1083891). This church has 12th century elements and may have been the focus of the later medieval settlement of Shorne. Several cropmarks recorded by the NMP close to the settlement of Shorne may be related to medieval or post-medieval activity, including a possible guarry (767) and possible pillow mounds (764) to the northwest of Shorne, and three earthwork banks to the south-east of the village (765).
- Watling Street (1680) had a resurgence of use as a routeway during the later medieval period, following the rebuilding of Rochester Bridge in the 11th century and the Norman conquest (Allen et al. 2012, 582); south of Shorne the remnants of a hollow way (1327) were excavated along the line of Watling Street (here just north of the existing A2), and indicate the continuing use of this routeway. The road layout in the area of site shown on the 1842 tithe map (not illustrated) and on late 19th century OS maps (Fig. 13) is likely to have originated in the medieval period. This includes Thong Lane, Brewers Road, the Shorne-Ifield road and Bowesden Lane that cross the site. A sunken lane (1334) c.2m wide with flanking banks c.1m wide and 0.30m high aligned NE-SW was observed during a walkover in 2004 (Oxford Archaeology 2004, site 216). This lane is shown on the OS map of 1897 (Fig.13) as an earlier alignment of Brewers Road leading from Watling Street (1680) to the village of Shorne. This lane may be medieval in date as the village of Shorne was very likely in existence by the 12th century. Within the south-eastern part of the scheme a later medieval silver coin (3542) was found north of the A2 within modern agricultural land. This find was probably an accidental loss.
- 2.3.86 Another later medieval settlement that was close to the scheme was the hamlet of Thong located within the central part of the scheme along Thong Lane. The modern part of this hamlet is mostly excluded from the scheme. Thong may date from at least the late 12th century as Gilbert of Glanvil confirmed the tithes of Rundale and Thuange (now Thong) to the church of Rochester during the reign of King Henry II (1154-1189). The landholdings of the church of Rochester in Thong continued until the dissolution when they were surrendered to the crown. In the late 17th century after the restoration this land was given back to the Dean and Chapter of Rochester (Hasted 1797). There are several clusters of later medieval findspots located east and west of Thong Lane just outside the scheme to the north-east (897, 899, 900, 901) and south-east of this settlement (841-844, 866, 867, 897, 899), indicating possible areas of former later medieval settlement activity.

- 2.3.87 The central part of the scheme may have been part of the manor of Randall during the later medieval period. Randall Manor house (1458) was located midway between Thong and Shorne and 450m from the scheme limits (Fig. 10). The site of the manor house was excavated from 2005-2015 by the Shorne Woods Archaeology Group (SWAG) and dated to the 13th-16th century. A cluster of later medieval findspots have been recorded 750m north of the site of Randall Manor. These have been recorded by metal detecting close to Shorne Ifield Road and within the area of the scheme. This includes find spots 909-913 including a silver coin (913) of Edward III dated to 1351-1361 AD. These finds spots are suggestive of possible later medieval settlement activity within the scheme to the north of Shorne Ifield Road.
- The NMP cropmark data and the 2019 geophysical survey (Headland 2019) identified a number of possible medieval features within the central part of the scheme in the parish of Shorne including a trackway (1819) and an enclosure (1818). The trackway (1819) is orientated north-west to south-east before heading eastwards towards the settlement of Thong. A circular cropmark associated with trackway (1819) may be a building located adjacent to the trackway. The enclosure (1818) was recorded by the 2019 geophysical survey just north of the trackway (1819) as it continues towards Thong. This sub rectangular enclosure has inner partitions and an area of disturbance which may be the remains of a building. The enclosure also has a large number of discrete features likely to be pits. The enclosure is not shown on the Shorne Tithe map of 1842 (CTR 336A) or on the later 19th century OS maps (Fig. 13). This enclosure may be a possible medieval farmstead as it is located on a trackway (1819) heading eastwards towards Thong and north-westwards towards Gravesend (then Gravesham) and Milton. Both Gravesham and Milton were founded by the late 11th century and are recorded in the Domesday Survey (Palmer 2019).

Parish of Cobham

- 2.3.89 During the later medieval period Watling Street (**1680**) formed the parish boundary between Shorne to the north and Cobham to the south, except for Claylane Wood on the north, which was also part of Cobham parish.
- 2.3.90 The church of St Mary Magdalene, Cobham, is Grade I listed (1350259) and is located c.300m south of the scheme. The chancel of this church dates to c.1220 and it is therefore very likely that the settlement of Cobham had developed in the vicinity of the church by this date. The manor of Cobham was formed around c.1200 and was gifted to Henry de Cobham by King John. The late medieval manor house associated with this manor was located near or on of the late 16th Cobham Hall (1095053) which replaced it, and is probably indicated by a cropmark enclosure and trackway just to the south of the standing buildings (Fig. 7). Cobham hall is located 1.5km (nearly 1 mile) east of the church and 700m south of the site. The medieval park associated with this manor occupied the majority of the parish of Cobham (Hasted 1797). A medieval well known as St Thomas's Well (1302) is located within the north-western part of Cobham Park and within the scheme area, and was preserved in situ during the HS1 (CTRL) works. Cobham Park is now a Grade II* registered park and garden (RPG1), and remnants of the park pale (1287) have been recorded within the scheme area.

- 2.3.91 Several roads in the parish of Cobham and within the scheme may have originated in the medieval period including Henhurst Road and Halfpence Lane. Henhurst Road was altered during the HS1 (CTRL) and A2 widening, but its original position can be seen on later 19th century OS maps (Fig. 13). A further lane which forks (3536) east of Henhurst Road and west of Halfpence Lane can be seen on the Cobham tithe map of 1845 and later 19th century OS maps. This trackway may also be medieval in origin. These additional roads linked Watling Street (1680) with The Street in Cobham. Henhurst Road, Halfpence Lane and the two further roads may have had dispersed medieval farmsteads or settlements located either side of them.
- 2.3.92 The medieval manor and shrunken settlement of Henhurst, on the south side of Watling Street and either side of Henhurst Road, later became part of the parish of Cobham. This manor was in existence by the late 11th century. The manor was owned by Gotcelin de Hænherste before passing to Hubert de Burgh during the reign of Henry III (1216-1272). During the reign of Edward I, the manor was passed from Edmond Pakenham to the priory of Leeds in Kent until the dissolution. After this the manor was granted to Sir George Brooke lord Cobham who himself gifted the manor to Sir George Harpur of Sutton Valence during the reign of King Edward VI (1547-1553). The manor was still in existence in the late 18th century, and belonged to Percival Hart Dyke of Lullingstone (Hasted 1797).
- 2.3.93 Shorne Woods Archaeology Group have conducted documentary research and have concluded that the medieval Henhurst manor house was probably located in a loop of Henhurst Road that existed south of the scheme until this road was straightened in the early 20th century. Alternatively, it may have lain below Jeskyns Court, a Grade II listed (1095060) 16th century house further south, as the Jeskyn family leased Henhurst manor house from the Harpurs in the 15th century (Cockett 2018).
- 2.3.94 The medieval settlement of Henhurst may have been located either side of Henhurst Road, south of the A2 and north of Jeskyns Road to Cobham. The post-medieval and modern hamlet of Henhurst is located either side of Henhurst Road in a linear pattern. It is likely that Henhurst had a dispersed settlement pattern in the medieval period and this is suggested by archaeological evidence. In 2007, part of a medieval settlement including a sunken-floored building dating to the 11th-13th century (1306) was found just south of the Watling Street (1680) and just north of the scheme during the A2 widening works (Allen et al. 2012, Pond D South, 525-535). This settlement was located 0.5km east of Henhurst Road and on the 1st edition OS map of 1869 (not illustrated) this area is labelled as Henhurst Dale. A number of other medieval features (3535) were also recorded as part of the A2 works just east of the (pre-later 20th century) Henhurst Road and just north of the site. This excavation at Bodley's Yard identified a series of medieval or later field boundaries perpendicular to Watling Street (1680) and some undated pits and postholes.
- 2.3.95 Claylane Wood may have been part of the manor of Henhurst in the later medieval period. Within the Claylane Wood a trackway was recorded which was orientated NE-SW (762). This trackway may be medieval in date and may have linked the settlement of Thong via Watling Street.

Parish of Ifield

- 2.3.96 The church of St Margaret, Ifield, is Grade II listed (1350862) and is located east of Church Road and just west of the scheme. The church contains a medieval window in the south wall of the chancel but was mostly rebuilt in the late 16th century. The parish of Ifield may have originally been quite large but by the mid 19th century it comprised only the church, a small area of land and a few houses along Watling Street. The church is situated by itself just east of Church Lane, but may originally have been associated with adjacent medieval settlement. The deserted medieval manorial settlement of Cossington (1010710) is a scheduled monument located 1km south-west of the church. The scheduling entry states that this settlement was part of the larger Ifield estate, but was sold to a member of the Cossington family in the late 13th or early 14th century.
- 2.3.97 Church Lane at the western edge of the scheme is presumably medieval, given that the church (1350862) had a medieval foundation. This road originally continued north-eastwards from the church before turning north-west towards Watling Street (Fig. 13), but was altered by the construction of HS1 and A2 widening. The post-medieval village of Singlewell-Ifield was located at the intersection between the A2 and Church Lane (Fig. 13), and the medieval settlement of Ifield may also have been here. A parallel set of linear cropmarks orientated NE-SW (3540) were recorded in the field east of the church of St Margaret. This may have been a medieval road which linked Watling Street with the church of St Margaret and Church Lane.
- 2.3.98 A 13th century ritual pit (1521) containing a partially butchered cow, a pregnant sow and a dog was found during the A2 widening just east of Church Road (Allen et al. 2012, 534-535). If the medieval settlement of Ifield was located along Watling Street this pit would have been located several hundred metres south of the settlement.
- 2.3.99 Part of a medieval settlement (1313) was identified in the parish of Ifield and east of Church Road during the HS1 works. Medieval features included boundary or droveway ditches parallel to Church Road, and a number of other ditches, pits and a hearth, dated between c.1050-1250, and this may have been part of the medieval settlement of Ifield. Further medieval features, with a similar date range, were recorded in an area of burnt sarsen stones to the east of Church Road, suggesting field clearance during a phase of agricultural intensification (Bull 2006). The HER notes that north-south aligned cropmarks (1594) south of the church and just west of the site may be lazy beds, and these could date from the medieval or post-medieval period. A medieval marl or chalk pit (1532) is also recorded nearby within the chalk along the western edge of the scheme.

Parish of Northfleet

2.3.100 The scheme has only a very limited impact in the parish of Northfleet west of Ifield (Fig. 10), and so is not dealt with in any detail here. A medieval settlement (3104) adjacent to the Late Saxon settlement (3143) found in the bottom of the Downs Road dry valley continued until the 12th century, and just to the south a series of enclosures and a working hollow containing two ovens (3118) of 12th-13th century date were probably associated. A brick clamp (3121) was found several hundred metres to the west, and this contained bricks dating 1450-1700 AD, so may have been late medieval in origin. Further east, and midway between Downs Road and Tollgate Junction, a medieval settlement (3120) of 12th-14th century date was uncovered straddling the lines of HS1 and the new A2, consisting of an enclosure to the south and a network of smaller plots to the north, both containing buildings. This lay only 250m south of the scheme, but other than a possible trackway and field, medieval activity did not continue north across the A2 Activity Park.

Post-medieval period (Fig. 11)

- 2.3.101 During the post-medieval period the landscape of the scheme area primarily comprised agricultural land interspersed by small settlements and farmsteads. The Gravesend to Stroud road (now the A226) was upgraded to a turnpike road in 1711. The Tithe map of 1840 shows that St Mary's Church was isolated within its triangular area of land, and that at this date no post-medieval buildings stood around it. The hamlet of Thong is located in the centre of the scheme area but is excluded from the scheme. Cobham Park remained an important estate, and associated with this is a scheduled reservoir south of the scheme (1012964).
- 2.3.102 The tithe maps of Chalk (1841), Shorne (1842), Cobham (1845) and Ifield (1839) held at the Kent History Centre revealed a variety of post-medieval features within these four parishes. This documentary information, together with features shown on later 19th century OS maps, are discussed below along with findspots and sites noted through excavation.

Parish of Chalk.

2.3.103 The historic core of the village of Chalk was located 400m north-west of the scheme. This village also had a dispersed settlement pattern along Church Lane, Petticoat Lane and Higham Lane. The Chalk Tithe map of 1840 indicates the use and ownership of the different fields of the site in the mid-19th century. The majority of the scheme within the parish of Chalk was in use as arable land associated with the estate of John Stuart Earl of Darley of Cobham Hall. The tithe map shows three manorial boundaries within the site which may have been formed in the medieval period. This includes the eastern boundary of West Court (3528), the western boundary of East Chalk (787) and the parish boundary of Chalk and Shorne (3529). A central part swathe of the site either side of the A226, east of Castle Lane and east of boundary (3528) was arable land owned by William Brown of Philborough Farm (now Filborough) (1089020). The tithe map of 1840 shows that a number of field boundaries within the scheme were removed by the mid-19th century and larger arable fields were created. One field boundary (1852) at the very south of the site was noted during the walkover as a low bank and this is likely to be post-medieval in date.

- 2.3.104 The scheme area in the parish of Chalk contains evidence for post-medieval industrial activity including quarry pits (792, 793), and large chalk pits (776, 805) and a smaller one (777) were also located in the north-western part of the scheme.
- 2.3.105 Other post-medieval features primarily consist of cropmarks associated with the agricultural use and management of the land (801-803). A number of post-medieval findspots (833, 1093, 1095, 1191) within the parish may be accidental discards in agricultural land.
- 2.3.106 The Thames and Medway Canal (1449) passes through the marshland in the northern part of the scheme area. The canal converted into a railway in the mid-19th century and the remnants of a station (Milton Range Halt) are located on the scheme boundary (1542). A post-medieval ditch drainage ditch (781) was recorded as a cropmark in this northern marshy area of the scheme.

Parish of Shorne

- 2.3.107 During the post-medieval period the central-southern and central-eastern part of the scheme comprised agricultural land located adjacent to the hamlet of Thong. The roads in the vicinity of this part of the scheme that are on the shown on the 1842 tithe map and the later 19th century OS maps (Fig. 13) include Thong Lane, Shorne Ifield Road and two trackways through Randall Woods (now Shorne Woods. This includes one north-south trackway which led southwards from Shorne Ifield Road leading to Watling Street and one east-west trackway which continued south-eastwards towards Watling Street. Two 17th century (or earlier) listed buildings are situated close to this part of the scheme including the Grade II listed White Horse Cottage (1083901) located west of Thong Lane and the Grade II listed Baynards Cottage (1252853) south of Shorne Ifield Road. This cottage is shown on the Shorne Tithe map of 1842 and the late 19th and early 20th century OS maps but was demolished by the late 20th century.
- 2.3.108 The Shorne Tithe map of 1842 (CTR 336B) indicates that the eastern-central part of the scheme was owned by the Trustees of the Earl of Darnley. The Darnley family held Cobham Hall and a large estate in this area including the manor of Randall. These fields were in use as arable and pasture fields apart from a small chalk pit just east of Thong Lane. Muggins Chalk Pit is located just outside the scheme. Muggins Lane east of the pit defines the eastern edge of the scheme here, and this trackway led north-westwards towards Gravesend and a branch also continued to St Mary's Church. The presence of several post-medieval chalk pits in this area on the historic maps suggests there may be more located within the scheme. If these existed, they may have been situated adjacent to Thong Lane, Shorne Ifield Road and Muggins Lane.

- 2.3.109 The remains of two adjacent post-medieval buildings, an oast house (1535) and a cottage (1815) may be located just north of Shorne Ifield Road within the eastern part of the scheme. The cottage (1815) appears on the tithe map of 1842 as a small rectangular building (described as cottage and garden in the schedule) within a triangular plot of land. The later 19th century OS maps have the label `Baynards' in this area but this may relate to the 17th century listed cottage south of Shorne Ifield Road (1083901) (Fig. 13). The cottage within the scheme still appears on the mid-19th century OS maps but has since been demolished. The nearby oast house (1535) does not appear on the 1842 tithe map but does appear on the later 19th century maps (Fig. 13). A rectangular building is shown on the 1864 OS map and by 1897 the building had a roundel on the north-west side which is suggestive of an oast house (Fig. 13). Oast houses were used for drying hops used as part of the brewing process, and are round with a distinctive cone-shaped roof. This building appears to have been extant until the later 20th century when it was demolished.
- 2.3.110 The Shorne Tithe map of 1842 (CTR 336B) and the OS map of 1864 (Fig. 13 inset) indicate that several buildings and possibly a pond (1140) were located east of the cottage (1815) including several cottages and three agricultural buildings to the west. These buildings were redeveloped by the late 19th century as shown on the OS map of 1897, which labels these buildings as Upper Ifield (Fig. 13). The geophysical survey recorded an area of disturbance within the scheme and just west of the Upper Ifield cottages, and this may indicate the demolished remains of the buildings shown on the 1842 tithe map and the pond and buildings shown on the 1864 OS map.
- 2.3.111 To the west of Thong a road, which can be seen on both the Tithe map and the 1897 OS map, headed north-westwards towards Gravesend (Fig. 13). Most of the fields in this part of the scheme were also owned by Earl Darnley. These fields were used for arable purposes apart from two pasture field located adjacent to the settlement of Thong.
- 2.3.112 Within the south-eastern part of the scheme and north of Watling Street the Shorne Tithe map shows Brewers Road and Bowesden Lane, both of which are still extant. Both roads led to Shorne Ridgeway and northwards towards Shorne Village. As discussed above, Brewers Road has altered course, and its former course is preserved as a sunken lane (1334). By the 16th century (or possibility before), two Grade II listed 16th century cottages (1369994, 1346412) show that the village of Shorne had split into two parts, one located 1km NNW of the site and the other located 300m north of the site along Brewers Road. Another building, Boghurst Cottage (3531), is located just west of Brewers Road and appears to still be extant. This cottage is within the scheme area but in an area that will not be trenched and is now in use as part of The Nook Pet Hotel.

- 2.3.113 The remains of a post-medieval brickworks (1787) may be located within the south-eastern part of the scheme. The Shorne Tithe map of 1842 (CTR 336) shows that a square area of land located just north of Watling Street with a small building to the east. This parcel of land is labelled 324, Brick Yard Cottage belonging to the Earl of Darnley's estate. The later 19th century OS maps show a brickworks with two kilns and several outbuildings. The brickworks also shown on the early 20th century maps but was abandoned by the 1930s. It appears that the southern part of the complex, including one of the two kilns and other structures, has already been removed by the A2, but it is possible that the remains of the northernmost brick making kiln survive within the scheme area.
- 2.3.114 The eastern part of the scheme to the south of the village of Shorne was also mostly in use as arable land on part of the Earl of Darnley's estate. A post-medieval copper alloy token (3543) found here may have been a chance loss. This arable land formed part of Park Pale Farm (1136) at the eastern edge of the wider Cobham Hall manor estate, and this may have been the reason for its name. The post-medieval park pale itself (3532) was located within the scheme just east of the farm and was aligned roughly NE-SW. This boundary formed the parish division between Shorne and Higham as well as the edge of the Cobham estate. This boundary was preserved as a hedgerow in the later 19th century (Fig. 13) but was removed in the early 20th century and became just a parish boundary on a map. It is possible that some of this park pale and parish boundary survives as a feature below ground. It is also possible that this boundary may be medieval rather than post-medieval in date.
- 2.3.115 Park Pale farm was occupied by William Langford, and the farm buildings themselves are shown on the 1842 tithe map and 1897 OS map (Fig.13), but it is unclear whether these are still extant. This area is now in use as Harlex Haulage Services industrial site, but there are a few buildings in the southern part of this area which could be the old farm buildings. A NW-SE field boundary shown on the 1842 tithe map just north of Park Pale Farm forms the boundary between two fields within the scheme. This field boundary can be seen on satellite imagery as a linear cropmark. The 1842 tithe map and the 1872 OS map (not illustrated) show a north-south aligned field boundary (3541) within this part of the scheme. This boundary was removed by 1897 (Fig.13).
- 2.3.116 A number of post-medieval features were recorded by a walkover in 2004 just north of the A2 and just north of the scheme. This includes several clay pits (1332), a field bank (1333), several drainage ditches (1336, 1344, 1348, 1350), an undated platform (1342) and a concentration of post-medieval brick rubble from a former structure (1337).

Parish of Cobham

2.3.117 During the post-medieval period the part of the parish of Cobham within the scheme consisted primarily of agricultural fields and woodland. As discussed above, Church Road and Halfpence Lane and the two NE-SW aligned roads (3536) may have originated in the later medieval period (Fig. 7). In the later 19th century the right fork of the NE-SW aligned road (3536) was known as Battle Street at the southern end and Scotland Lane for most of its route. Both roads (3536) had been reduced to footpaths by the early 20th century. There were post-medieval farms in this area including one to south of Orchard House (1124) and a farmstead on Battle Street (1126), both outside the scheme.

- 2.3.118 In the post-medieval period Cobham Park extended as far west as Halfpence Lane and as far north as Watling Street (the A2). To the south it extended to Lodge Lane and cut across agricultural fields. To the east it extended almost as far as Knights Place Farm. Two Cobham Park Pale lines have been recorded by the HER within the study area south of Watling Street (1287, 1672). one of which was investigated by trenching during the construction of HS1 (Booth *et al.* 2011, 462). Other post-medieval features have been recorded within the park and south of the scheme. This includes a ha-ha, hollow-way and kennels (1327), Brewers Gate gatehouse (1328) and a 17th century conduit (1317).
- 2.3.119 The wider Cobham Hall estate extended much further than the home park. The southern part of the scheme just west of Halfpence Lane also belonged to Cobham Hall in the 19th century. This area was a mixture of woodland and rough land, and there were also several buildings, including the 16th century house known as The Mount, now Grade II listed (1096324) which is located not far south of the scheme. Other buildings included a kennels and a house and garden, which were probably demolished in the mid-20th century when two parts of an RAF camp (1298, 1324) were built in this area.
- 2.3.120 Claylane Wood belonged to the parish of Cobham and was located north of Watling Street. The Cobham Tithe map of 1845 (CTR 96B) shows that Claylane Wood had several different owners including the Earl of Darnley. The tithe map and later OS maps (Fig. 13) show that several buildings were located just north of the A2 and along the southern boundary of the scheme. A cottage (1822) was described as pightle and cottage in the ward schedule and belonged to Medhurst Troughton. The word pightle means a small field or enclosure. These cottages appear on the OS maps of 1872 and 1897 but are not shown on mapping after this, so they must have been demolished. A possible post-medieval sand pit (763) is also recorded by the HER within Claylane Wood. This is recorded close to two earthworks, possible trackways (762) discussed above as medieval trackways. These trackways could, however, be post-medieval, as one of them is in alignment with a trackway shown on the later 19th century mapping (Fig.13).
- 2.3.121 Evidence of post-medieval industrial activity. A mid to late 18th century brick kiln (1533) was found during construction of HS1 just south of the A2. In addition, the Cobham tithe map of 1845 shows that the right-hand fork of the NE-SW aligned road (3536) was known as Brick Hole Lane. Brick Hole Field, presumably the site of quarries, was located south of the scheme, towards the settlement of Cobham. The 1897 OS map (Fig. 13) also shows two large chalk pits north of The Street in Cobham, both south of the scheme.
 - Parish of Ifield
- 2.3.122 The Ifield tithe map of 1839 shows that this parish was very small, containing only the church of St Margaret, Ifield (1350862) located east of Church Road and a handful of houses along Watling Street. The parish contained agricultural land east of Church Road and also an area north of Watling Street. The part of this parish within the scheme was in use as arable land owned by Thomas Colyer Esq and John Hubble. All of the field boundaries shown on the 1839 tithe map and the OS map of 1897 (Fig. 13) were removed in the 20th century. The settlement of Ifield became known as Shinglewell or Ifield in the later 19th century, and was absorbed into Gravesend during the 20th century.

2.3.123 The HS1 excavations found three possible post-medieval quarries (**1470**) just west of the scheme within this parish, dated between the 16th and 20th centuries. The third quarry was a multi-chambered one.

Modern (Fig.12)

- 2.3.124 The scheme area in Kent has remained largely in agricultural use into the modern period. A number of post-medieval field boundaries were removed in the 20th century to create larger arable fields. A linear WNW-ESE cropmark feature (804) within the western part of the scheme is shown by 20th century OS maps to be a footpath created in the 1930s and used until the later 20th century, but has since been abandoned, as this part of the field has reverted to arable use.
- 2.3.125 A number of extractive industries were located within and just outside the scheme in the 20th century. One quarry (1562) within the north-western part of the scheme was converted to an air raid shelter during the Second World War. A cluster of 20th century industrial sites were located in the southern and south-eastern part of the scheme and surrounding area. They include the Cobham Coal mine (1295), which was located just south of the A2. This coal mine was in operation from 1947-1953 and it is unknown if the tunnels extend under the site. In the mid to later 20th century several large clay pits (1492, 1500) were excavated just west and north of Brewers Road. The clay pit west of Brewers Road (1500) had an associated tramway (1340) which was installed by 1939 to move the extracted clay towards a processing wash plant works (1338) just north of the scheme. Remains of this wash plant in the form of a wash pit (1338) and tramway (1340) were observed during a walkover in 2004 (Oxford Archaeology 2004) and may extend into the scheme. A nearby modern sluice gate (1341) may be associated with the wash plant.
- 2.3.126 In the 1930s The Laughing Water Restaurant and Tea Rooms (1280) was constructed within the south-eastern part of the scheme. This was owned by the Darnley family and had an associated swimming pool and boating lake. This restaurant was destroyed in a fire and the site is now used by The Inn on the Lake Hotel.
- 2.3.127 The Eastcourt Marshes on the Thames floodplain on the north were utilised as Milton Rifle Range (1422) during the 19th to 20th-centuries, remains of which are extant within the area. The Thames and Medway Canal (1449) passed through the marshland, and the canal was later converted into a railway, of which the remnants of a station (Milton Range Halt) are located on the scheme boundary (1542).
- 2.3.128 The remnants of earthworks associated with an early 21st-century golf course (768) have also been recorded within the Filborough Marshes further to the south.

RAF Gravesend and associated RAF camps

- 2.3.129 Gravesend Airport (1459) occupied a substantial area of land within and directly to the west of the scheme area including a U-shaped road (1598). The airfield was first constructed as a private airfield in the 1930s before being utilised as RAF Gravesend (1408) during the Second World War (Godden and Piggott 2020). Anti-aircraft batteries (1429, 1430, 1454) were located around the vicinity of the airfield within the bounds of the scheme. A light anti-aircraft battery (1430) identified as a square cropmark surrounded by a circular feature by the NMP cropmark survey (Fig. 7) was located in the north-western part of the scheme. This battery was probably destroyed by the construction of the Southern Valley Golf Course. A building known as Polperro (1435) located just outside the site and south of the A226 was used as an Anti-Aircraft Headquarters during the Second World War and was probably the headquarters for the co-ordination of the local batteries. Further Second World War structures (1403, 1411, 1412, 1562), including several road blocks, also lay just outside the area of the scheme. Two Second World War aircraft crash sites are recorded just west of the scheme (1553, 1554) and one within the southern part of the scheme (1559).
- 2.3.130 Five RAF campsites were sited to the south of the A2 and were associated with RAF Gravesend. Godden (2020) sourced an Air Ministry plan which shows the layout and position of these camps (Godden and Piggott 2020, Figures 13 and 14). These camps were located in a dispersed pattern in Ashenbank Woods within and around the scheme. These were designated: Site 1 (1300), Site 2 (1331), Site 3 (1299), Site 4 (1298) and Site 5 (1301). Sites 1, 3, 4, and 5 were located south of the A2. All of these camps are located wholly or partly within the scheme although parts of Sites 3 has been destroyed by the A2 widening and HS1 (CTRL) works. The dispersed camp may have been a target for aerial attack as several bomb craters (1441) are located c.200m north of the scheme. The camp was used after the Second World War to house demobilised service personnel and homeless people. It was then used as temporary council house accommodation in the early 1950s (Rootes 2017). A walkover in 2019 for the LTC scheme confirmed that structures (1835-1845) survive within the former camps.
- 2.3.131 Site 1 (1300) of the RAF camp was located within the scheme. A visit to this camp in 2007 identified the remains of building bases and tarmac roads. A visit to the Site 1 camp in 2019 identified an area with several depressions (1835), a probable toilet block (1840) and a concrete opening, possibly for a shaft (1841).

- 2.3.132 The Site 2 camp (1331) was also located within the scheme, just north of the A2. Oral history from an inhabitant at the camp suggests that the majority of the buildings in Site 2 were Nissen Huts (Rootes 2017). The majority of Site 2 camp foundations appear to have been left in situ and the only encroachment into this site was from a car park associated with the Inn on the Lake Hotel (see below). Before the car park was created a small part of the camp in Land Parcel 84 may have been removed. A walkover of this site in 2004 recoded a number of brick and concentre structures including two underground air raid shelters, three concrete platforms, two drains and a concentration of brick rubble (Oxford Archaeology 2004). The two RAF air raid shelters within the site were surveyed in 2010 by Victor Smith (report with Kent HER). The 2019 walkover as part of the LTC scheme (Godden and Piggott 2020) identified two earthworks (1843, 1844) and one structure (1845) within the Site 2 camp (1331).
- 2.3.133 Site 4 (1298) of the camp was located within the scheme just south of the A2 and the HER entry notes that two air raid shelters that were located in this camp were removed as part of the HS1 (CTRL) works. The 2019 walkover also recorded several extant features within the Site 4 camp including a rectangular shaft with a metal lining at the top (1836) a concrete wall (1837), a hole with a rubble fill (1838), a drain with a manhole cover (1839) and a probable air raid shelter (1842).
- 2.3.134 Site 5 (1301) was located across part of the scheme, south of the A2. A visit in 2007 noted that the bases of several huts were observed along with three tarmacked roads and three surviving air raid shelters. The air raid shelters are semi-buried structures of pre-cast concrete, with brick entrances.
- 2.3.135 Other than the air raid shelters, the buildings associated with this camp do not appear to have been formally surveyed. There may be more structures located below ground associated with this camp, including within the area of the scheme.
- 2.3.136 A First World War heavy anti-aircraft battery (748) was located at Cobham, just south of the scheme, and a Second World War Civil Defence Depot (1728) was located just north of The Street in Cobham and just south of the scheme.
- 2.3.137 In the late 1990s the Southern Valley Golf Course was created on the central western side of the scheme, overlying part of the former Gravesend airfield. The landscaping of this area, which included the construction of a number of sand bunkers, may have truncated or destroyed archaeological features located in this area. A possible undated boundary ditch (1428) was located within this area but appears to have been destroyed by the golf course. The geophysical survey (Headland Archaeology 2019) did not detect any archaeological features in this area (Fig. 5a).
- 2.3.138 In the later 20th and early 21st century several roads that bisect the scheme were reconfigured as part of the HS1 and A2 widening works. This included changes to Church Road, which was diverted south-eastwards to the Henhurst junction. Henhurst Road was also reconfigured (Fig. 13). Three roundabouts were added to this junction with the A2 (Fig. 3).

- 2.3.139 Jeskyns Community Woodland was created in 2007 south of HS1 and east of Henhurst Road, and this is 360-acre area of newly planted woodland, meadows and orchards. The landscaping as part of this community park may have removed archaeological features within the footprint of any intrusive works.
- 2.3.140 Undated features including cropmarks (Figure 7b and 11). Numerous undated cropmark features, comprising ditches, enclosure and pits, have been identified across the higher ground in the northern and central part of the scheme area. The majority of these features are concentrated within the central area, where similar features of prehistoric, Romano-British and medieval date have been identified. The majority of these unknown features have been discussed above within the prehistoric, Roman, medieval or post-medieval section. Where this data was attached to a shapefile this is shown on Figure 7b and may also be shown on Figure 11.
- 2.3.141 Within the scheme the only undated features that have not previously been mentioned include the cropmark of an enclosure (1399) within the centre of the scheme and an enclosure to the north-west of the scheme (1622). These data points from Kent HER did not have any polygon data attached. Two undated findspots (880, 1038) have also been recorded within the northern part of the scheme.

2.4 Archaeological Potential

- 2.4.1 Late Upper Palaeolithic and Mesolithic. In the absence of significant survey or development, activity of these periods is normally represented only by occasional findspots. There has only been limited archaeological investigation within the main central part of the scheme area in Kent, and that largely limited to gas pipelines. The recovery of Mesolithic struck flints from the central part and the south-west edge of the scheme area, and of axes found within a dry valley towards the south end, together with the large quantities of material from survey in the hinterland of the scheme at Shorne and Ranscombe and flints scattered along the A2 to the west, makes it likely that further activity of these periods will be found within the scheme area. A series of dry valleys run across the scheme area, and valley bottoms and floodplain areas are both potentially areas where in situ activity may have been preserved by colluvium or alluvium; the former may also provide evidence of eroded activity areas on higher ground. The potential for Late Upper Palaeolithic activity must therefore be considered to be moderate, and for Mesolithic activity to be high.
- 2.4.2 **Neolithic and Early Bronze Age.** Neolithic monuments are known to the west and south of the scheme, and barrows or ring ditches of proven Early Bronze Age date both within and immediately adjacent to the scheme, indicating that burials are likely to be found, while scattered pits and areas containing struck flint also attest to settlement activity. Further ring ditches are known from geophysical survey and cropmarks within the scheme area, and these are likely to be of similar date. The same considerations regarding valley bottoms and the floodplain are relevant as for the Mesolithic period. The potential for encountering archaeology of Neolithic date must therefore be considered to be moderate, and for early Bronze Age date to be high to very high.

- 2.4.3 Later prehistoric: Later Bronze Age and Iron Age. One area of Iron Age pits, gullies and ditches has been found within the scheme south of the A226, associated with a significant concentration of findspots including coins, and investigations in the central and western parts of the scheme have also revealed settlement of the later Bronze Age and Iron Age. Both settlements and burials of these periods have proved to be common within and adjacent to the investigated southern edge of the scheme area, and along the western extension. A variety of enclosures of probable later prehistoric date has been identified through cropmark and geophysical survey evidence, and other finds of this period have also been recovered from the scheme area. The potential for archaeology of both the later Bronze Age and Iron Age periods within the scheme is considered to be very high.
- 2.4.4 Roman. Watling Street runs along the south end of the scheme, and Roman settlements of varying status have been found close to this, with clear potential for further roadside settlement or other activity. A Roman town (1999) was located at Springhead and this included a temple complex and Roman cemeteries either side of Watling Street. It is possible that small traces of the Roman road surface may survive under the western part of the scheme but much of the Roman road and adjacent roadside activity would have been removed by the development of the A2 in the 20th and early 21st century.
- 2.4.5 A villa was found just west of the scheme at Chalk, and a concentration of cropmarks, features, a cemetery and finds including building material and coins strongly suggests that another relatively high-status settlement lies not far south of St Mary's church. Both Chalk and St Mary's Church lie adjacent to the A226 that links Gravesend to Rochester, and there is therefore potential for confirming the existence of a former Roman road running past these settlements to Rochester. This road perhaps once linked to a north-south road leading to a river crossing between Gravesend and Tilbury (a possible Roman road ran from Brentwood to the Thames foreshore at West Tilbury along the course of the A128 (Historic England 2019, Linear 385), but medieval and later quarrying is likely to have removed all trace of it below Gravesend (Hiscock 1968).
- 2.4.6 A variety of other cropmark enclosures within the scheme area appear to coincide with Roman findspots, and have been dated as Roman in the Kent HER. Some of these are linked by trackways, which may therefore prove also to be of Roman origin. Roman burials have been found both in association with settlement enclosures, major ditch boundaries and as separate cemeteries in the vicinity of the scheme, so there is high potential for further burials within the scheme area. Kilns have been found just outside the limits of the scheme towards the north end of the scheme area in Kent. Although the outcrop of sand and clay on which the kilns were found lies mainly to the east of the scheme, a narrow band also crosses the scheme, so there is also potential to discover more kilns within the scheme corridor. Overall, the potential for encountering archaeological remains of Roman date is very high.

- 2.4.7 Medieval. Only limited evidence of early medieval activity has been found within the scheme area in Kent. Finds and graves have reportedly been found within Claylane Wood, although no certain evidence survives, and early medieval metal finds have also been recovered from south of the A226 close to St Marv's Church, which is possibly the site of a late Saxon church. It is likely that there was formerly a settlement around the church, and this may have lain to the south close to the A226, particularly if this was in origin a Roman road. The finds here could also indicate early medieval pagan burials prior to the establishment of the church, or could possibly only be chance losses by travellers between Gravesend and Rochester. A penny of Coenwulf was also found at East Court Farm to the north of St Mary's Church, and may instead suggest that the settlement was located north of the church, along Church Lane. Although there is currently no evidence within the scheme area, Anglo-Saxon burials are often found in association with prehistoric barrows in Kent, and there is therefore also the potential for finding Anglo-Saxon burials within or around the ring ditches known from geophysical survey or as cropmarks within the scheme area.
- 2.4.8 Settlement evidence of the Anglo-Saxon period is more difficult to locate, as it does not ordinarily show up well on cropmark or geophysical surveys, nor do settlements (other than those of high status) contain metal finds. A probable waterhole of this period was found within the scheme on the north side of Watling Street (Allen et al. 2012, 488-491), and an isolated sunken-floored Anglo-Saxon building (3230) west of Northumberland Bottom. Late Saxon settlement was found south of the scheme at Downs Road on the line of HS1, and two Saxon corn-driers (2377) 400m north-west of the west end of the scheme. The evidence of possible settlement associated with St Mary's Church, Chalk, is strong, although this may well lie outside the limits of the scheme. There is also potential to find evidence of the late Saxon settlement of Henhurst. Overall, the potential for finding archaeology of the early medieval period is moderate to high.
- 2.4.9 For the later medieval period, the antiquity of East Court farm to the north of St Mary's Church is not considered in the Kent VCH, but may represent the former site of the manor, or of the home farm attached to it, with associated medieval settlement within the scheme along the west side of Church Road. Medieval settlement in the vicinity of Henhurst (possibly known as Henhurst Dale) was found on the south side of Watling Street during the A2 Improvements (Allen et al. 2012), and it is possible that further roadside settlement of this kind may exist further to the east. Generally, however, the settlement pattern in north Kent is of scattered farmsteads, and this is not an aspect of the period that was dealt with in the Kent VCH. Several medieval hamlets or farmsteads of 11th-12th century date were found adjacent to the western part of the scheme including a settlement at Wingfield Bank (2348), possibly the hamlet of Wenifalle and a medieval settlement near Downs Road (3104, 3118, 3119) and another at Northumberland Bottom (3120).
- 2.4.10 Salterns of medieval date are recorded on the Thames floodplain just east of the scheme, and there is potential for further such structures to be found within the scheme corridor on the Thames floodplain. Overall, therefore, the potential for later medieval archaeology within the Kent part of the scheme is moderate.

2.4.11 Post-medieval and modern. Buildings and other remains of the post-medieval period are scattered throughout the scheme area of the scheme in Kent. The archaeological potential of the surroundings of the early post-medieval standing buildings, and of the former 19th century brickworks, are of particular note. In addition, remains of the Gravesend airfield used by the RAF in World War II and its associated defences are likely to be found below ground, and five Second World War RAF camps were located within the south-eastern part of the scheme. Several walkovers have indicated that remains of these camps exist above and below ground. Another Second World War camp (2421) was located at Northumberland Bottom just south of the scheme, but was recorded and removed for HS1. The potential for encountering remains of this period is very high.

3 Project Aims and Objectives

3.1 Introduction

3.1.1 The aims set out in section 3.2 below cover all of the area within the scheme limits, and deal with the trial trenching to be undertaken in both Phase 1 and Phase 2. The specific aims also deal with all of the scheme area in Kent, but do not include those for Palaeolithic remains, which will be dealt with in the separate WSI for the Palaeolithic, nor those for the deep sequences of deposits on the Thames floodplain, for which the deposit model and further geotechnical information should enable investigation to be refined and targeted.

3.2 General Aims

- 3.2.1 To establish the presence or absence of archaeological remains within the limits of the scheme, and the extent of any areas where remains appear likely to be absent:
- 3.2.2 In areas within the scheme limits where archaeological remains are known or suspected, to clarify the reliability of the cropmark or geophysical survey evidence:
- 3.2.3 In areas within the scheme limits where no archaeological remains are indicated by aerial or geophysical survey, to clarify whether this apparent absence of remains is supported by an absence of archaeological features from sample trenching;
- 3.2.4 To determine the degree of complexity of any surviving horizontal or vertical stratigraphy, and in particular, to investigate areas where topography indicates the likelihood of deep deposit sequences for evidence of buried archaeological horizons and palaeo-environmental sequences;
- 3.2.5 Where remains are present, to determine the period(s) represented, the extent, state of preservation and character of the archaeological remains;
- 3.2.6 To establish the range and state of preservation of archaeological artefacts, and through their recovery and examination, to establish the potential for information about the economy, status and contacts of past inhabitants of the scheme footprint;
- 3.2.7 To determine whether palaeo-environmental remains are preserved within the scheme limits, and, where these are found, to determine their types (eg, charred plant remains, waterlogged remains, molluscan remains), state of preservation and potential for environmental information. This will be achieved through the recovery of samples from sedimentary sequences and archaeological features suitable for assessment of a range of palaeoenvironmental remains (eg. charred and waterlogged plant remains, charcoal, insects, pollen, diatoms, ostracods/foraminifera and molluscs) and scientific dating (eg. radiocarbon and OSL dating);

- 3.2.8 To investigate and record the extent, character and chronology of the sedimentary sequences found during trial trenching, in particular those immediately adjacent to and in floodplains, contained within palaeochannels or in dry valleys, and to use the data to refine existing geoarchaeological (predictive) deposit models.
- 3.2.9 To place any identified archaeological remains into their local and, where appropriate, regional or national context, and to assess the implications of any such discoveries for our current understanding of settlement and landscape change in the wider area, including an assessment of the associations of any remains with reference to the historic landscape;
- 3.2.10 To provide sufficient information to enable the LTC archaeological advisor, in consultation with the Key Archaeological Stakeholders, to determine the significance of the archaeological assets identified within the land parcel;
- 3.2.11 To provide reports upon the discoveries to inform the Environmental Statement (ES) supporting the Development Consent Order (DCO) and support the preparation of a robust further archaeological mitigation strategy for the Enabling Works and Construction phases of the scheme;
- 3.2.12 Following the DCO, to deposit the report in the public domain, and to generate an accessible and useable archive which will allow future research of the evidence to be undertaken.

3.3 Specific Objectives

- 3.3.1 To conduct the programme of archaeological investigation within the general research parameters and objectives defined by the South East Research Framework (SERF), http://www.kent.gov.uk/leisure-and-community/history-and-heritage/south-east-research-framework, and to take account of the aims and objectives of the Greater Thames Estuary Historic Environment Research Framework. All of the aims will not be repeated here, as many can only be addressed effectively during further archaeological mitigation. The aims set out below are those thought appropriate to trial trenching.
- 3.3.2 Overarching research themes that span a wide range of periods include:
- 3.3.3 Chronologies and processes of change specific aspects of innovation need further study, including monument comparisons, tradable artefacts (such as stone axes and Roman foodstuffs), animal and plant introductions, technological innovations (such as Dutch drainage techniques and duck-decoy ponds), the spread of ideas and people, including evidence for migration into and within the region.
- 3.3.4 Landscape and environment the importance of inter-relationships between sites and/or material remains, agricultural advances and the economic growth stemming from them, changes caused by agricultural disruptions and other human activities, the inter-relationships between rural agricultural food production and urban centres.
- 3.3.5 To investigate the presence/absence and longevity of ancient field systems within and across time periods, both upstanding in the landscape and buried, for example beneath later hedgerows. This will assist in understanding the development of the historic landscape affected by the scheme.

- 3.3.6 For the late Upper Palaeolithic, Mesolithic and Neolithic periods, to investigate Landscape Processes, and in particular, the potential for sites being eroded and buried beneath colluvium or Head deposits on the sides or at the foot of slope areas (Aims C.6 and C.7), and for the survival of undisturbed occupation surfaces below colluvium in valley sides or bottoms, or beneath later alluviation in the Thames floodplain.
- 3.3.7 To investigate the potential for preserved environmental evidence associated with lithic assemblages of late Upper Palaeolithic or Mesolithic date, particularly in areas of colluvium or on the low-lying Thames floodplain, and to investigate the contribution made by human activity to colluvial processes (Aim B.14 and B.18).
- 3.3.8 To investigate the activity carried out around burial monuments of the Neolithic and early Bronze Age, whether peripheral burial, deposits related to visits, or reuse for burial or other purposes in later periods.
- 3.3.9 To investigate the extent of domestic and other Neolithic and early Bronze Age activity unrelated to burials within the scheme area in Kent, and investigate the range of size and duration of such activity areas and characterise their functions.
- 3.3.10 To further clarify the density and range of sites of the later Bronze Age and Iron Age from the North Downs down to the floodplain of the Thames, including small-scale and low density sites, and the relationships between activities taking place in these geographic zones (Champion 2019, Environment, Settlement distribution and Wider Context).
- 3.3.11 In particular, to clarify the character and duration of use of the Iron Age site that has produced significant quantities of metalwork just south of the A226 on the east side of the central section of the scheme in Kent.
- 3.3.12 To investigate the potential for buried or eroded sites of later prehistoric date below colluvium in dry valleys, and below alluvium on the Thames floodplain, and to investigate the contribution of human activity to colluviation in later prehistory and the Roman period.
- 3.3.13 To clarify the potential for well-preserved deposits in these protected locations, whether structural or environmental.
- 3.3.14 To confirm the Roman date and establish the character and duration of use of the enclosures indicated by cropmark and/or by geophysical survey evidence believed to be Roman within the scheme, and to identify any other enclosures of Roman date.
- 3.3.15 To further characterise the extent, date range, character and status of the significant Roman settlement just south of the A226.
- 3.3.16 To investigate whether any evidence of a Roman road or trackway exists alongside the current A226. This feeds into Research Aim 4 of the SERF for the Roman period.
- 3.3.17 To establish whether evidence of any further Roman roadside settlement or other activity exists alongside Watling Street.
- 3.3.18 To clarify whether further Roman burials exist within the scheme area, and to date and characterise these (using artefactual and/or scientific dating). This feeds into Research Aim 7 of the SERF for the Roman period.

- 3.3.19 To determine whether evidence of pottery production is present along the floodplain edge within the scheme area, and if so, to date and characterise this.
- 3.3.20 To determine whether Roman salterns or other evidence of wetland use of the Thames floodplain exist within the scheme area.
- 3.3.21 For the early medieval period, to clarify whether a cemetery or other form of burial site is present centred upon Claylane Wood, and if confirmed, to determine the extent, date, character and status of this.
- 3.3.22 To determine whether further early medieval burials are located south of the A226 in the north-east of the central part of the scheme in Kent, or associated with any of the ring ditches of presumed prehistoric date within the scheme area.
- 3.3.23 To establish whether there was early medieval settlement overlying the Roman settlement south of the A226, and if so, to determine its spatial relationship to the earlier settlement.
- 3.3.24 To determine whether pre-Domesday settlement extended south from the vicinity of St Mary's Church into the area of the scheme, and if so, to characterise this and establish the duration of occupation into the later medieval period.
- 3.3.25 To look for evidence of low-status or ephemeral sites with or without substantial below-ground buildings, such as transhumance settlements or as found in North Kent at Chestfield near Whitstable (Thomas 2019, 13), and, bearing in mind their probable poverty of artefactual evidence, take samples for scientific dating.
- 3.3.26 To establish whether the trackways attributed to the medieval period by the HER are genuinely of this date, and in particular, to investigate the antiquity of the north-south trackway that may have divided the manors of East and West Chalk.
- 3.3.27 To look for evidence of medieval origins at the scattered farmsteads and hamlets of the post-medieval period across the area of the scheme.
- 3.3.28 Post-medieval and modern. To investigate the environs of early post-medieval standing buildings for evidence of associated buildings and other structures that would enhance our understanding of the layout, functions and development of these sites.
- 3.3.29 To investigate the former brickworks north of Watling Street and determine its date of origin and disuse, how much of this survives and in what state of preservation.
- 3.3.30 To investigate and record the preservation of the WWII airfield remains in relation to the known map evidence, and to record any additional structures that may be associated.
- 3.3.31 To look for below-ground remains associated with the RAF camps and associated structures.

4 Project-specific Excavation and Recording Methodology

4.1 Constraints

- 4.1.1 The constraints described below prevent trial trenching within them at this stage of the project. Appropriate archaeological mitigation for the areas covered by these constraints will be undertaken at a later stage of the project, taking account of the results of the trial trenching in adjacent areas, and will be agreed between Highways England and the Key Archaeological Stakeholders in advance of any construction works. The agreed measures will be set out in the WSI for Further Archaeological Mitigation.
- 4.1.2 These constraints have been observed (as far as is practicable) when drawing up trench layouts in the detailed WSIs for each land parcel along the route. The Principal Contractor Balfour Beatty will be responsible for ensuring that the constraints are followed through the Permit to Dig system. A brief summary of the types of constraint is given below, but detailed RAMS for the Health and Safety risks will be the responsibility of each archaeological subcontractor and will be reviewed and approved by the Principal Contractor before trial trenching can begin.
- 4.1.3 Areas of low, medium and high risk of UXO exist along the scheme, and those in the Kent section are indicated on Figure 15. Bomb crater sites are known in Shorne Wood, and small ordnance was recovered from the A2 west of Tonbridge during the A2 widening improvements (Allen et al. 2012, 535-6). Guidance as to the procedures to be followed in these areas will be provided by a specialist firm qualified in the detection and removal of UXO. No archaeological trenching will be allowed to take place until the appropriate surveys have taken place. Where the presence of UXO is suspected, trenches will be relocated and the area specified by the UXO specialist cordoned off until removal can be arranged. A specialist will be present on site throughout the laying out and machine excavation of the trenches, and briefings on the appropriate action to be taken in the event of the discovery of a Suspicious Object thereafter will be provided to all staff before work is allowed to commence.
- 4.1.4 Areas of ecological sensitivity are present at various points along the route (Figure 16). No archaeological trial trenching may take place within the specified exclusion zones (for example badger setts, root protection zones). In areas where great-crested newts or other reptiles are known, permission from Natural England will need to be obtained and appropriate protective measures implemented before trenching can take place. Protected ground-nesting birds such as larks will also make areas unavailable for trenching, but these have not been identified in advance, and so will be taken account of as fields become available and ecological searches are undertaken. The Principal Contractor's Environmental Manager will provide suitably qualified ecologists to supervise the protective measures and provide staff briefings before trenching commences. More detailed ecological information regarding exclusion zones will be provided in the detailed site-specific or group site-specific WSIs.

- 4.1.5 Woodland. One or two areas of woodland exist within the area of the scheme in Kent, and attempting to evaluate these by trial trenching while the trees are still standing will not be productive. Lidar survey and walkovers will be used to assess the potential of these areas for archaeological remains such as earthworks. Archaeological mitigation of these areas by evaluation or other means will be agreed between Highways England and the Key Archaeological Stakeholders once the trees have been felled, and will take into account the results of trial trenching in adjacent areas.
- 4.1.6 Both buried and overhead services cross the scheme route at various locations (examples are visible on Fig. 6, the geophysical survey greyscale plot), and no trenching will take place across the line of such services, or inside safe working distance from them. Details of the service locations have been provided in the plans accompanying the detailed WSIs, and are repeated here as Figure 17a and b. The Principal Contractor Balfour Beatty will be responsible for providing service plans, and for marking out exclusion zones on the ground to ensure that services are not disturbed and that safe working practices are followed. Where it is necessary for machines or other vehicles to pass under overhead cables, this will only be possible at specified crossing points marked by goalposts. Safety briefings from the Principal Contractor will provide details of the procedures to be followed.
- 4.1.7 Contaminated ground and asbestos. Areas of ground contaminated by chemicals/heavy minerals or by spreads of asbestos may occur within the scheme boundary. Some previous industrial areas are known, and a programme of ground investigation is programmed to be taking place in parallel to the archaeological trial trenching, which may provide further advance notice of contamination in some areas. Where areas of severe contamination are known, these will be excluded from trial trenching. It is however unlikely that ground investigation information upon contamination will be available for all areas in advance of trial trenching, so it will be necessary for archaeological subcontractors through their RAMS to brief their staff in advance about the possibility of encountering contaminated ground during the trial trenching programme. Should any suspected areas of contamination be found, work should cease and the Principal Contractor informed.
- 4.1.8 The Principal Contractor Balfour Beatty will be responsible for determining the level of contamination in any suspected areas, and thereafter for implementing procedures for working in such areas if safe to do so. In such circumstances the archaeological subcontractors should have in place through their RAMS procedures for dealing with finds and environmental samples from potentially contaminated areas. The removal of contaminated ground will be the responsibility of the Principal Contractor for the construction works.
- 4.1.9 RAF crash site. A WWII crash site is recorded south of the former Gravesend Airfield within the area of the scheme (1559). No trial trenching should be undertaken in the vicinity of this site until the military Specialist appointed by LTC has been consulted. If trial trenching is required, a licence will need to be obtained from the Ministry of Defence (MoD) prior to commencing fieldwork, and excavation will need to be undertaken by an appropriately qualified team working to a specific WSI approved by the LTC military specialist, the Key Archaeological Stakeholders and the MoD.

4.2 Liaison with Landowners and the public

- 4.2.1 Overall liaison with landowners will be handled by the LTC Land and Property team. Archaeological subcontractors will be provided with the names of landowners and tenant farmers in advance of trial trenching, to ensure that they are properly informed should the landowner or tenant farmer come onto site, and will work closely with the LTC team to develop and maintain excellent landowner relationships.
- 4.2.2 All archaeological subcontractors will take care to ensure that the damage caused by the trial trenching is kept to the minimum practicable level. Photographs of each field will be taken on entering each field to provide a record of conditions before trial trenching begins. Measures to be observed will include using only approved access routes to fields, making use of existing tracks within fields wherever possible, and limiting tracking between trenches to clearly defined routes and keeping spoil heaps under tight control.
- 4.2.3 Topsoil will be stored separately from subsoils, and in areas of pasture, turf will be stored according to the requirements of the landowner, and will be reinstated if required.
- 4.2.4 The staff of archaeological subcontractors will be polite to landowners and members of the public at all times. Should the landowner or tenant farmer have a problem, they should be referred to the LTC liaison team, unless this is a minor matter that can be resolved immediately by the team on the ground. If a member of the public comes onto site, they should be politely advised that this is a working area that is not safe, and asked to leave. If they do not comply, the matter should be referred to the Principal Contractor.
- 4.2.5 Reinstatement. The responsibility for reinstatement of the trenches rests with the Principal Contractor. All trenches will be pumped dry prior to backfilling. Backfilling will be carried out in reverse stratigraphic order, and each layer of subsoil will be compacted before reinstatement continues. Any land drains disturbed by the trenching will be repaired during reinstatement. Topsoil will be compacted after reinstatement, and the machine driver will take care to ensure that the area surrounding the trench is clean and level. In areas of pasture, turf will be replaced, or the ground reseeded, should the landowner require it.
- 4.2.6 Photographs of each trench will be taken following reinstatement, and wider photographs of groups of trenches in each field, as a record of the conditions at the conclusion of archaeological trial trenching.
- 4.2.7 Further details of the individual requirements of landowners will be provided to the archaeological subcontractor by the Principal Contractor in advance of trial trenching.

4.3 Scope of Works

- 4.3.1 The total scheme area in Kent that potentially requires some form of archaeological assessment of potential is 440.66ha. Of this, however, 121.72ha cannot be accessed due to constraints, leaving a total area of 298.94ha available for trenching, subject to access to the land. The trenching of late Upper Palaeolithic and Holocene deposits is divided into Phase 1 Priority areas totalling 149 ha. and Phase 2 areas comprising the remainder. Priority Phase 1 areas are those where early works are proposed, and includes part of WSIs T, U and V (Figs 18a and 18b). Phase 2 includes areas peripheral to the Priority areas in WSIs T, U and V, and all of WSIs W and X, including open areas with patchy woodland.
- 4.3.2 The upper 2m of sequences of deep colluvial and Head deposits in the dry valleys will be tested by the trial trenches, but Pleistocene Head deposits will be the subject of separate evaluation by the Palaeolithic and Geoarchaeological specialists for the scheme, who are preparing a strategy for investigation of Palaeolithic deposits to inform the geoarchaeological deposit model still in preparation.
- 4.3.3 Subject to the constraints of land access and ecology, the evaluation of the Phase 1 Priority areas will take place between April and July 2020. Reporting upon these areas will be completed by the end of September 2020. The specific methodologies to ensure that this programme is met are set out in sections 4.5-5.2 below.
- 4.3.4 Due to problems with land access, the evaluation of Phase 2 areas may take place immediately following completion of the Phase 1 trenching within the same land parcels. Where practical, the results of the Phase 1 trenching will be fed into the proposals for Phase 2 trenching in the same or adjacent areas, and the detailed WSIs for those land parcels will be amended as necessary to take account of the results of the Phase 1 trenching. Phase 2 trenching will continue (if required) until the end of May 2021, and the reports on the Phase 2 evaluations will be completed and approved prior to the end of September 2021.
- 4.3.5 The general approach to trial trenching set out in the Scheme-wide Specification is broadly the same along the whole route in Kent, consisting of a combination of targeted trenching where cropmark or geophysical anomalies have been identified and a blanket 5% sample of 30m x 2m trenches based on a grid for blank plateau areas. Following consultation with the Kent Key Archaeological Stakeholders, dry valleys will be investigated using a combination of transects of 30m x 2m trenches spaced 10m apart and a spread of other 30m x 2m trenches on the slopes and bases based upon topographic considerations.
- 4.3.6 In Kent, the trenching will also be informed by the archaeological geophysical survey (Headland Archaeology 2019), by cropmark evidence provided by the NMP and the Hoo survey, and by data gathered from the Kent HER within and around the limits of the scheme (see Figs 7-12). Where fieldwalking or excavation has been carried out within the limits of the scheme, as for example, in land parcels 75-78 and 83 in advance of the Shorne to Farningham Gas Pipeline (Network Archaeology 1999), the results of this have also be included when considering the potential of the site, and the layout of trenches.
- 4.3.7 Figure 4 shows current land use (ie whether under pasture, under cultivation or other use).
- 4.3.8 No trial trenching is currently anticipated on the Thames floodplain. Should any

trenching be required, this would need to be preceded by a review of available borehole data and previous investigations, by electro-magnetic and or electrical-profiling survey and by geoarchaeological test-pitting and/or boreholes to characterise the floodplain edge and to define `gravel islands' buried within the floodplain, as these locations were often used for settlement and other activities in the wetland in the past. These investigations would also assist in the identification of major peat deposits with potential for environmental information and preserved organic objects and structures. Geoarchaeological investigation will follow Historic England guidelines (Historic England 2015). All such investigations would inform the geoarchaeological deposit model.

- 4.3.9 The overview of the archaeological background presented in Section 2 of this WSI set out data available to inform the trial trenching, in particular with reference to sites that may not be evident through cropmarks or geophysical survey. Examples of such types of site include many earlier prehistoric sites, cemetery sites and post-medieval industrial sites that are marked on historic maps. In addition, topographic analysis has been used in conjunction with GI borehole data to identify areas of likely colluvium and alluvium, where archaeological sites may be deeply buried, and so not visible from cropmarks or geophysical survey.
- 4.3.10 Final trench layouts produced as part of the detailed site-specific or group site-specific WSIs already approved by the Kent Key Archaeological Stakeholders are shown on Figures 18a, 18b and 18c, and take account of historic map information, local ecological constraints and services.
- 4.3.11 All archaeological trial trenching will be carried out in accordance with the KCC requirements for trial trenching (KCC Manual of Specifications for Archaeological Work in Kent, Part B).

4.4 Programme

- 4.4.1 Stripping of trenches in the Phase 1 Priority areas began on 22nd April 2020, and is planned to continue until the end of July 2020. Following completion of the reporting for Phase 1, which is programmed for the end of September 2020, any discoveries arising from the Phase 1 trial trenching that might affect the layout or scope of the trenching for Phase 2 will be incorporated into the relevant detailed site-specific or group site-specific WSIs. Phase 2 trial trenching will continue as soon as possible, subject to approval of any revised WSIs land access being available, and will continue during 2020 and early 2021 for as long as is required to complete the Phase 2 evaluation by trenching. According to the Scheme-Wide Specification for Trial Trenching (Highways England 2018), fieldwork must be completed by the end of May 2021 in order to ensure that the Phase 2 trial trenching reports have been completed before the end of September 2021.
- 4.4.2 Several excavation teams will work in parallel with the aim of meeting the deadlines set for completion of the Phase 1 and Phase 2 trial trenching. Each team will consist of a Team Supervisor, directing up to seven Project Archaeologists. Several teams will work under the control of a Project Officer, who will be responsible to the subcontractor's Senior Project Manager. Depending upon the number of teams required, and over what area these are spread, more than one Project Officer may be required.
- 4.4.3 Plant, welfare and all other necessary attendances will be provided by the Principal Contractor Balfour Beatty, who will also arrange the details of land access and undertake any necessary advance surveys (for example for ecology, UXO, buried services or contaminated ground).
- 4.4.4 In practice, trenching will take place in phases as access becomes available.

4.5 Specific Methodology for Trial Trenching

- 4.5.1 In dryland areas, trenches will comprise a mixture of those targeted upon archaeological features, deposits or areas of interest, blanket coverage of apparently blank plateau areas using a 5% sample and a combination of transects of trenches spaced 10m apart and a spread of other trenches for dry valleys. Trenches in the blank plateau and dry valley sample areas will be 30m long and 1.8-2m wide, and will aim to provide even coverage of the area. In targeted areas trenches will generally be 30m in length, but may vary according to the feature or features being investigated, and the overall percentage sampled by targeted trenching may vary. Variations to standard trench sizes have been agreed with the Key Archaeological Stakeholders in advance.
- 4.5.2 Where archaeological features cannot be adequately understood within the trench exposure, a contingency is available for extending the trench following consultation with the Highways England representative and the Key Archaeological Stakeholders.

- 4.5.3 In areas where deep sequences of deposits occur, trenches will be wider and longer, as they will need to be stepped out and provided with ramps to allow safe access for entry, hand-excavation and recording as necessary. This may well be necessary in dry valleys. Where this proves to be necessary, the scheme geoarchaeologist will be consulted as to whether they wish to inspect and sample the exposed deposits, and the archaeological contractor's geoarchaeologist will be informed in advance so that they can attend and record such sequences.
- 4.5.4 All trench layouts will be provided in the detailed WSIs approved in advance of trial trenching, and once land access has been agreed, each trench will be provided with a unique number. Should any variations to the locations of trenches be necessitated by local conditions on site, the archaeological subcontractor will immediately inform the relevant Key Archaeological Stakeholders, and will send them a revised layout as soon as the new locations have been recorded by GPS. Relocation of trenches will as far as is practicable ensure that the same features are targeted, and will aim to maintain the same percentage sample in blanket sample areas.
- 4.5.5 A register of trenches will be maintained throughout the duration of the trial trenching using the *pro forma* table provided (see Table 1) and via the OA webmap. These will allow the progress of the work to be monitored by Highways England and by the Key Archaeological Stakeholders, whose site visits will also be recorded.
- 4.5.6 Trenches will be laid out using a GPS or (in areas of poor signal) a TST, their NGR locations logged, and the trenches plotted onto the Ordnance Survey. The archaeological subcontractor(s) will have at least one surveyor working full-time on this scheme to ensure a rapid turnaround of surveyed data for review and validation in the field, for site progress meetings and project updates, and to aid the archaeological teams in interpretation.
- 4.5.7 Once the trenches have been set out, in conjunction with the Principal Contractor's Supervisor, the archaeological Supervisor will check the areas against service plans provided and ensure that a full CAT scan has been carried out before the ground is broken.
- 4.5.8 Trenches will be excavated using a mechanical excavator fitted with a toothless ditching bucket under close archaeological supervision. All Machine Supervisors will have previous experience of machining archaeological trenches, and because of the potential for scatters of worked flint in the topsoil/ploughsoil, machine stripping will be supervised by archaeologists with experience of identifying lithic artefacts.
- 4.5.9 Topsoil and subsoils will be excavated stratigraphically until the first archaeological horizon or the surface of the natural geology is reached, whichever is the higher. If deposits are more than 200mm thick, they will be excavated in spits and any finds recorded by spit within the deposit. Where it is uncertain whether the natural is colluvium or bedrock, the contractor's geoarchaeologist on site will be consulted, and colluvial deposits will also be excavated up to a depth of 1m. Should the natural bedrock not have been reached at this depth, the procedures for deepening the excavation will be implemented (as described in 4.5.3, 4.5.15 and 4.5.25-28).

- 4.5.10 The spoil and the soil surfaces exposed during machining will be scanned by eye and using a metal detector to recover artefacts. Metal detecting will only be undertaken by experienced operators, and the archaeological contractor will consult the Kent Finds Liaison Officer regarding local detectorists who might assist. All detectorists will sign an agreement that they understand that all finds must be surrendered to the archaeological contractor, and belong to the landowner.
- 4.5.11 Soil will be stored at a safe distance from the edge of the trenches.
- 4.5.12 Should struck flints be found in quantity within the topsoil or subsoil in any trench (>3 flints per m2 over an area of more than 4 sq. m), Highways England's representative and the Key Archaeological Stakeholders will be contacted, and an appropriate strategy for recovery agreed and instructed by Highways England before continuing with machining of that trench. Unless otherwise specified, this should involve the recovery and bagging of flints from spoil excavated in 1m or 2m lengths of the trench in spits no more than 100mm thick.
- 4.5.13 Should metal finds (other than those of recent date) be found, these will be recorded 3-dimensionally, and if either prehistoric or of precious metal, will fall under the provisions of the Treasure Act (see 4.7.6 below). Should several finds be recovered, and a hoard be suspected, then machining will cease and Highways England and the Key Archaeological Stakeholders will be contacted, and, upon instruction from Highways England, a specific methodology for excavation and retrieval will be prepared for approval and will be implemented.
- 4.5.14 Should mechanical excavation expose masonry remains, the machine will be stopped until the extent of the masonry has been determined by hand-excavation. The archaeological Project Officer should be informed immediately, and he/she should inform the archaeological Project Manager, who will in turn inform Highways England and the relevant Key Archaeological Stakeholders. Should the machine monitor not be able to establish the orientation and limits of the masonry rapidly, then the machine will be instructed to stop excavation above the highest exposure of the masonry, and will only recommence deeper excavation at a distance judged to be beyond the limit of the remains. For walls, this will depend upon their orientation in relation to the trench; for stone surfaces, a minimum distance of 2m should be allowed, and further mechanical excavation should proceed in very shallow spits under very close archaeological supervision until it is clear that no further masonry is present. Should further masonry be encountered further along the trench, this process should be repeated.
- 4.5.15 Trenches will normally be excavated to the safe working depth limit, ie no greater than 1.0m; should natural geology or an archaeological horizon not have been encountered at that depth, then, following consultation with the Key Archaeological Stakeholder, the trench may be stepped out to allow safe excavation to greater depth. In such cases, the scheme geoarchaeologist will be kept informed of progress, and a geoarchaeologist from the archaeological contractor's team will be available to help record and interpret deposits.

- 4.5.16 Mechanical excavation under close archaeological supervision will usually result in a surface sufficiently clean to distinguish archaeological features and deposits clearly. If this is not the case, then once the relevant horizon has been reached the trench will be hand-cleaned prior to photography (a minimum of one record photograph from either end, and one in the central part of the trench).
- 4.5.17 Any archaeological features and changes in the underlying geology will then be planned by GPS. Trenches devoid of archaeology need not be planned, but a representative section or sections of the deposit sequence will be drawn, depending upon whether the depth or sequence of the overlying deposits vary significantly along the trench.
- 4.5.18 Following stripping, hand-cleaning as necessary, photography and planning, all trenches will be left open for at least 48 hours before backfilling can commence, in order to allow buried features to weather out. After this, the trench will be inspected and any archaeological features that have weathered out will be planned.
- 4.5.19 A representative sample of archaeological features will be investigated by hand to characterise and (if possible) date them, and sections of all investigated archaeological features will be drawn at an appropriate scale. The excavated sample should include at least one of each type of feature present (eg. pit, ditch, posthole), and should finds of more than one period be evident, at least one feature of each period and type.
- 4.5.20 Discrete features and deposits will normally be excavated by hand, unless otherwise agreed with the Key Archaeological Stakeholder. In general discrete features (pits, postholes, tree-throw holes) will be half-sectioned. Larger features such as quarries, shafts, very large pits and suspected sunkenfeatured buildings will be sampled using a smaller percentage sufficient to establish their character. Pits that prove to have complex stratigraphy, and include artefact-rich deposits, will only be excavated until this has been established, after which excavation will cease, unless agreed otherwise with the Key Archaeological Stakeholders and instructed by Highways England. Features that prove to be more than 2m deep (shafts or wells) will not be excavated below this depth at trial trenching stage, although they should be hand-augered to provide further information on likely depth.
- 4.5.21 A sample of tree-throw holes and other possible features should also be tested by hand-excavation, as tree-throw holes can contain significant collections of earlier prehistoric artefacts, particularly those of early Neolithic date. Sampling other potential features will determine whether these are man-made or natural, and if the latter, will characterise them to aid recognition of others and avoid the need for further testing.

- 4.5.22 A minimum length of 20% of all linear features, or a length of 1m, will be hand-excavated, whichever is the greater. If ditches more than 1m deep are found, then with the agreement of the Key Archaeological Stakeholders, and on a case by case basis, these may be bottomed by machine under close archaeological supervision. All soil excavated by machine must be sorted for finds by hand. If required by the Key Archaeological Stakeholders and instructed by Highways England, provision will be made by stepping the trench sides or shoring for safe access for hand-excavation to greater depth, or (following machine excavation) to recover finds and environmental samples from the deepest fills, and to record them.
- 4.5.23 More extensive deposits (layers) should initially be investigated by one or more hand-dug trenches 1m wide to establish their depth, character and date, and to determine whether they overlie further archaeological features or deposits.
- 4.5.24 Should a layer prove to contain concentrations of finds (>3 per m2), then Highways England and the Key Archaeological Stakeholders should be informed and consulted as to whether further excavation is necessary at evaluation stage. If further excavation is considered essential, and following instruction by Highways England, the deposit will be sampled by hand using a 1m grid in spits no more than 50mm thick. If finds are not concentrated, then following agreement with the Key Archaeological Stakeholder the layer should be removed by machine under close archaeological supervision and the spoil sorted for finds.
- 4.5.25 Should complex or vertical stratigraphy be encountered, Highways England and the Key Archaeological Stakeholders will be contacted and further excavation of this will be halted until a site meeting has taken place to discuss and agree an appropriate strategy for further investigation. Upon instruction from Highways England, the archaeological contractor will then implement the agreed strategy.
- 4.5.26 Should a deeper sequence of deposits be encountered, trenches will need to be stepped out and provided with ramps to allow safe access for entry, hand-excavation and recording as necessary. Trenches will not normally be excavated to a greater depth than 2m for reasons of Health and Safety. Should deposit sequences continue below this depth, a hand-held auger may be used to probe the deposits to greater depth.
- 4.5.27 Trial trenching will not excavate geological deposits such as gravel terrace deposits or extensive Head deposits at this stage. These are the province of the Palaeolithic specialist, who will devise an appropriate strategy for their investigation to be implemented at a later stage in the project. The OCA team will, however, be aware of the potential for recovering Palaeolithic finds from areas in which the underlying geology is Head deposits, particularly from features cut into these deposits, and will alert the LTC Palaeolithic specialist should such finds be made. If a cluster of such finds is recovered, he should be invited to visit the trench prior to backfilling.
- 4.5.28 Should consultation with the scheme geoarchaeologist, Key Archaeological Stakeholders and Highways England representative result in an alternative trenching excavation strategy, a supplementary Method Statement will be written and approved prior to its implementation.

- 4.5.29 Should masonry, hearths, kilns or corndriers be found, these should be investigated by hand sufficiently to establish their character, level of preservation, information potential and date. In the absence of artefactual dating, consideration should be given to scientific dating. Structures will not be fully excavated at trial trenching stage, unless agreed otherwise between Highways England, the Key Archaeological Stakeholders and the archaeological trial trenching contractor, and upon Instruction from Highways England. For masonry, recording should be by GPS and photogrammetry, supplemented if appropriate by hand planning, and the sizes, form and types of stone or brick, treatment eg dressing, coursing, jointing and bonding materials should be recorded using pro forma sheets, and samples should be taken to assist detailed recording and sourcing of materials. All associated stratigraphic relationships should be recorded both graphically and on context records.
- 4.5.30 Should industrial sites of other types be found, Highways England and the Key Archaeological Stakeholders should be consulted to establish an appropriate approach to evaluation, and if required, a supplementary Method Statement prepared for instruction and implementation. Investigation of historic industrial sites will follow the guidelines of Science for Historic Industries provided by Historic England (English Heritage 2006). Archaeometallurgical sites will be evaluated in accordance with the recommendations of Historic England (Historic England 2015).
- 4.5.31 Upstanding earthworks will be surveyed prior to trenching, unless a detailed survey already exists. A specific trenching strategy will be prepared for discrete features, and particularly those possibly belonging to burial mounds, in consultation with Highways England and the Key Archaeological Stakeholders. Linear earthwork features such as hedge banks will normally be sectioned by machine under close archaeological supervision in the first instance to establish their general character, date and complexity, which will be recorded in section. Should they prove to have a complex sequence of deposits and artefactual evidence of ancient date, machine excavation will cease and further excavation will continue by hand. Should they not, following machine excavation and recording a further sample of these deposits may be dug by hand to retrieve artefacts or environmental samples.
- 4.5.32 If trenching of upstanding discrete mounds is required following consultation with the Key Archaeological Stakeholders and Highways England, then following instruction a specific trenching strategy will be prepared and implemented.
- 4.5.33 Test-pits or trenches within standing buildings may be excavated by hand or by machine, depending upon access. Such trenches will be excavated and recorded stratigraphically context by context. Removal of modern deposits such as concrete floors, and ensuring that buildings remain safe during trial trenching, will be the responsibility of the Principal Contractor,
- 4.5.34 Investigation of areas of former military installations such as airfields should be carried out only after maps of the facilities have been obtained, and following consultation with the LTC military specialist. Trenches should be laid out to take account of the features indicated by these maps. The location and character of these remains should be established, as well as the level of truncation they may have caused to any potential earlier archaeological remains.

- 4.5.35 All excavated deposits and features will be recorded using single context recording on *pro forma* context sheets and will be recorded in plan and section. Lists of finds and environmental samples will be kept. Small finds/special finds will be recorded 3-dimensionally and will be individually numbered and listed.
- 4.5.36 Plans and sections will be at a scale of 1:20 or 1:50, unless the level of information requires a more detailed graphic record at 1:10 or greater. The information will be transferred onto an OS-referenced CAD or GIS plan. Plans of trenches that have been stripped will be provided by email twice a week to Highways England and Key Archaeological Stakeholders, and hard copies made available at site visits.
- 4.5.37 A digital plan of the whole site subject to trial trenching, together with all archaeological features, will be maintained and updated as work progresses. Records will be made of all areas, even those that generate negative results.
- 4.5.38 Digital photographs will be taken of all trenches and archaeological features and of the general works in progress. Unless unsafe to do so, trenches will be left open until the Key Archaeological Stakeholders have confirmed that monitoring requirements have been satisfied.
- 4.5.39 Each trench will be reinstated using the materials excavated, and the backfilling of deposits will be done in the reverse order to the sequence of excavation. Any land drains damaged by the trenching will be repaired to working order during reinstatement by the Principal Contractor.

4.6 Human Remains

- 4.6.1 Should human bones be found, the Ministry of Justice, the coroner, Highways England and the relevant Key Archaeological Stakeholders will be informed, and a Ministry of Justice licence under Section 25 of the Burial Act 1857 will be obtained. No further excavation will be carried out until the appropriate strategy for preservation *in situ* or removal has been agreed with Highways England and the Key Archaeological Stakeholders. Human burials are not normally excavated at evaluation stage, but should this be considered necessary, then the following procedures must be followed.
- 4.6.2 All exhumation and post-excavation treatment of the remains will be carried out in accordance with published guidelines (Historic England 2018).
- 4.6.3 All inhumations, cremations and any grave goods that it is decided must be excavated at evaluation stage, will be recorded by photogrammetry and proforma skeleton sheets, and will be sketched or hand-planned as appropriate. Objects will also be surveyed in 3-dimensionally. Photographs of the excavation will be taken as directed by the supervising osteologist, and photographs of the emptied graves will also be taken for photogrammetic reconstruction.
- 4.6.4 Provision will be made for sampling of the grave fill of inhumations both to recover additional finds, and to sample for small bones/foetal remains, calcified or ossified soft tissue and (if appropriate) intestinal worms. Details of the procedures followed as standard by the archaeological contractor will be provided to the Key Archaeological Stakeholders, including the Historic England Science Advisor for the East of England, in advance, in order that they can ensure that relevant research objectives are being considered.

4.6.5 Cremations will be cleaned, photographed and sketched or hand-planned as appropriate, and if it is agreed that they should be excavated at evaluation stage, will either be excavated in spits, photographed and recorded by an osteologist on site, or if within a vessel, will be lifted in its entirety for excavation and recording in the laboratory by an osteologist. If excavated on site, all of the cremation fill will be recovered as a sample for flotation and sieving. If no artefacts are recovered from the cremation, consideration will be given to scientific dating of bone or associated charred plant remains.

4.7 Artefacts

- 4.7.1 All finds will be collected, unless in the special circumstances detailed below. Where features contain recent finds, a note on the types of material present should be made on the context sheet, and a photograph taken of the finds. These may thereafter be discarded, unless the site under evaluation is itself of recent date, in which case the detailed WSI will specify the finds retention and discard policy.
- 4.7.2 Where large assemblages of a ceramic building material or stone roofing are encountered *ex situ*, such as bricks from a brickworks discarded into quarry pits or incorporated into a surface, or large assemblages of animal bones in pits, only a representative sample of the material types present should be retrieved in evaluation. The aim of evaluation should be to leave most of the material *in situ* for further mitigation, when more considered strategies for sampling, retention and discard can be formulated.
- 4.7.3 Finds will be bagged and identified by context, unless their distribution warrants recording individually in 3-D (as for instance for flint concentrations). Finds will be removed from site to a secure location at the end of each working day, unless otherwise agreed with Highways England and the Key Archaeological Stakeholders.
- 4.7.4 In addition to in-house expertise in lifting and on-site packaging of all finds categories, each archaeological subcontractor will have a conservator on call to advise or visit should significant and fragile finds be encountered that warrant lifting with especial care. Finds processing and curation will follow best practice (UKIC 1983; UKIC 1988; Watkinson & Neal 1998). Waterlogged wood and other waterlogged organic artefacts will be dealt with following the recommendations of English Heritage (2010; 2012). X-radiography of metal artefacts will follow English Heritage guidelines (English Heritage 2006).
- 4.7.5 For significant features or deposits that lack artefactual dating, scientific dating, particularly radiometric dating, should be considered. This may involve the retention of sherds that are covered with burnt residues unwashed, and taking appropriate samples from waterlogged wood before it is sent for conservation.
- 4.7.6 All metal objects within the remit of the Treasure Act 1996 and ClfA Code of Practice will be reported to the coroner, Highways England, the Key Archaeological Stakeholders and the landowner. This includes both precious metals and base metals where they are of prehistoric date. Suitable measures will be taken to ensure their security where removal cannot take place immediately. The Portable Antiquities Scheme (PAS) Finds Liaison Officer will also be informed.

4.8 Environmental sampling

- 4.8.1 Bulk environmental samples will be taken from deposits with visible signs of well-preserved or frequent environmental remains. Column samples will be taken from deposit sequences if appropriate. Environmental sampling will be guided by the advice of the regional Historic England Scientific Advisor, who will be kept informed of progress, and by the contractor's Head of Environmental Archaeology, who will visit site, and will be consulted on sampling and scientific dating.
- 4.8.2 Sampling may be carried out on sequences that inform the development of the general past environment as well as on deposits within archaeological features, but should only be carried out upon deposits where the date of the deposit or sequence can be established by artefactual or scientific dating. Samples should include those taken specifically for scientific dating of significant features or deposits where artefactual evidence is not present.
- 4.8.3 Digital plans showing the locations from which environmental samples have been taken will be updated as work proceeds, and provided on a weekly basis or via webmap to the Key Archaeological Stakeholders.
- 4.8.4 Should complex deeper sequences of deposits be encountered, a specific Method Statement will be prepared in consultation with the archaeological contractor's Head of Geoarchaeology, the scheme geoarchaeologist and the regional Historic England Science Advisor for the sampling, assessment, dating and reporting of such colluvial deposit sequences, and following the Historic England guidelines for geoarchaeological investigations (Historic England 2015).
- 4.8.5 Sampling, processing and assessment will be carried out as specified by English Heritage (English Heritage 2011), and curation of flots likewise (English Heritage 2008). Animal bones will be recovered, processed and assessed as recommended by Historic England (Baker and Worley 2019). Environmental sampling should also bear in mind the potential use of materials for scientific dating, for example dendrochronology or radiocarbon dating (see section 4.9 below).

4.9 Scientific Dating

- 4.9.1 For significant features or deposits that lack artefactual dating, scientific dating, particularly radiometric dating, should be considered. Selection of material for radiocarbon dating will be carried out in consultation with the archaeological contractor's scientific dating specialist, and should also follow the advice of the Historic England Science Advisor for the South of England region. This may involve the retention of sherds that are covered with burnt residues unwashed, and taking appropriate samples from waterlogged wood before it is sent for conservation.
- 4.9.2 Dendrochronology, archaeomagnetic and luminescence dating should be carried out in accordance with English Heritage guidelines (English Heritage 2004; 2006; 2008). Advice will be taken from the archaeological contractor's scientific dating specialist.

4.10 Contingencies and Unforeseen Circumstances

4.10.1 In the event that unforeseen archaeological discoveries are made during the trial trenching, the archaeological subcontractor shall inform Highways England and the Key Archaeological Stakeholders, and if required prepare a short, written statement with plan detailing the archaeological evidence. Following assessment of the archaeological remains by the Key Archaeological Stakeholder, the archaeological subcontractor shall, upon instruction by Highways England, implement an amended scheme of investigation as appropriate.

4.11 Monitoring of Works

- 4.11.1 At least 5 days' notice of the commencement of the archaeological evaluation trenching works will be given to the Key Archaeological Stakeholders, who will be given a timetable for the evaluation in each land parcel (Figure 14) and updated on any changes to this as work proceeds.
- 4.11.2 The latter will have free access to the site (subject to Health and Safety considerations) and all records to ensure the works are being carried out in accordance with this WSI, the provisions of the detailed WSI for each land parcel, and all other relevant standards.
- 4.11.3 All Key Archaeological Stakeholders will be required to comply with the Health & Safety requirements of the principal contractor, Balfour Beatty, and will be accompanied by a Project Officer at all times while on site.
- 4.11.4 Key Archaeological Stakeholders will be kept updated with the progress of the trenching on a weekly basis, and regular weekly site meetings, supplemented if required by additional site meetings, will be agreed for the monitoring of work in progress. Site meetings involving Key Archaeological Stakeholders will be charged for by the relevant curatorial body.
- 4.11.5 In order to speed up the work and to avoid unnecessary site meetings, photographs and a summary record of empty trenches will be sent to the relevant Key Archaeological Stakeholders in order that they can sign these off without having to visit site.

4.12 Reinstatement

No trench will be backfilled (unless for reasons of Health and Safety) until signed off as complete by the relevant Key Archaeological Stakeholders. The responsibility for the reinstatement of trenches lies with the Principal Contractor, who will ensure that trenches are reinstated according to the requirements of the landowner, and the provisions of paragraph 4.2.5 above.

5 Report and Archive

5.1 Standards and content

- 5.1.1 All trial trenching reports will be prepared in accordance with ClfA standards (ClfA 2014) and with the Kent specification Manual Part B for trial trenching.
- 5.1.2 All trial trenching reports will be presented using the LTC report format provided by Highways England. The reports will be identified by the letter given to each site-specific or group site-specific WSI, and (where access was not possible to all of the areas) by the relevant land parcel numbers, which are shown on Figure 14 of this project-wide WSI.
- 5.1.3 All finds and environmental materials will be assessed by specialists of significant experience within their specialist field and with expertise in the areas of assessment, analysis and reporting of finds. All specialists will be named, and summary CVs supplied if required by the Key Archaeological Stakeholders.
- 5.1.4 The trial trenching reports will vary according to the scope set out in each detailed WSI, but will contain (as a minimum):
 - Non-technical summary
 - Introduction including location, geology/topography, archaeological background, scope of work, constraints and duration of fieldwork
 - Aims and objectives
 - Methodology
 - Results
 - Review of Aims and objectives including an interpretation of the recorded archaeological remains in the context of the relevant |South East Research Framework (SERF) objectives
 - Conclusions including a provisional statement of Significance of the remains following Historic England's first Research Theme: `A. Discovering, studying and defining historic assets and their significance' (English Heritage 2005).
 - Archive location
 - Finds and Environmental Appendices
 - Illustrations
 - References and Bibliography

- 5.1.5 As the Priority Phase 1 trial trenching will be followed by evaluation of adjacent areas in Phase 2, only a brief summary overview of the results at the end of Phase 1 will be prepared.
- 5.1.6 Following completion of the Phase 2 trial trenching, an overview of the results considered both chronologically and geographically, and Statements of Significance of the discoveries, will be prepared for the approval of the Key Archaeological Stakeholders to inform further archaeological mitigation. The former will be carried out by the trial trenching archaeological contractor selected by LTC, and the latter by LTC's own archaeological team. The Statements of Significance will be drawn up following Historic England guidance (Historic England 2017).

5.2 Timetable for delivery

- 5.2.1 The scheme-wide Specification for Archaeological Trial Trenching asked for a single report upon the Phase 1 Priority trenching. Due to the time constraints and requirements of the DCO, as well as the time required for review by Key Archaeological Stakeholders, reports will instead be prepared and submitted on a rolling programme in tandem with fieldwork. Depending upon the size of each site or group site area, and the density of archaeology present, the report upon each area will be submitted for comment within four-six weeks of the completion of the fieldwork.
- 5.2.2 Trenching began in late April 2020 in Kent, and Phase 1 trenching is expected to continue until August 2020. An interim summary of the findings will be prepared following the completion of fieldwork and reporting upon the Phase 1 areas made available for trenching by the end of September 2020. The interim statement will contain a preliminary assessment of the significance of the remains sampled.
- 5.2.3 Following completion of the Phase 1 Priority trenching, further trenching will continue as land parcels become available, and will be completed by the end of May 2021. Reporting upon the further trenching will be completed by the end of July 2021, and will be followed by an overview of the discoveries and the significance of the remains sampled and of any other significant archaeological remains that will be affected by the scheme.
- 5.2.4 Digital copies of the completed reports in Adobe Acrobat (.pdf) format will be provided to Balfour Beatty, to LTC and to the Key Archaeological Stakeholders for Kent. In order to ensure rapid turnaround of reports submitted for approval, consideration will be given to the provision of draft reports in advance of completion.
- 5.2.5 Once approved, copies of the reports for the sites in Kent will be deposited with the relevant Historic Environment Record on public access.
- 5.2.6 Release of trial trenching results to the wider public is not normally undertaken at trial trenching stage, as any significant discoveries are likely to be followed by further archaeological mitigation, providing a much greater level of information about what has been discovered. LTC has appointed a LTC Legacy and Benefits Officer Michelle Baker, who will liaise with Key Archaeological Stakeholders about how the results of the trial trenching work can be made available to the wider public. The archaeological subcontractor carrying out the trial trenching will liaise with the LTC Legacy and Benefits Officer to agree the basis for providing information in the appropriate media and formats at regular intervals.

5.3 Copyright

5.3.1 Copyright of all reports and materials generated in pursuance of this project will be vested in LTC, without prejudice to the intellectual property copyright of the authors of the reports.

5.4 Archive preparation and deposition

- 5.4.1 Archiving will be carried out in accordance with the CIFA Standards and Guidance for the creation, compilation, transfer and deposition of archaeological archives (CifA 2014b), and following Historic England guidelines (Brown 2011).
- 5.4.2 All primary records will be security copied, and a copy kept in a separate building.
- 5.4.3 The site archive will be deposited in a repository consistent with the standards required by the Museums and Galleries Commission, ie where it can be permanently conserved and managed and made available for public access and dissemination, following completion of the archaeological phase of the project. This may be with the appropriate local receiving museum in Kent, a repository made available by KCC Heritage Conservation or, if no such repository is available, with a repository for the whole project designated by LTC in consultation with KCC Heritage Conservation.
- 5.4.4 The digital data generated by the overall trial trenching scheme archive for Kent will be made available to the Kent HER in a format agreed with them at the conclusion of the project.
- 5.4.5 Oxford Cotswold Archaeology (OCA) are carrying out the Priority Phase 1 and Phase 2 trenching in Kent prior to submission of the DCO, and will make contact with the appropriate receiving museum prior to the start of trial trenching using the museum's own notification forms. These notification forms will be copied to the Key Archaeological Stakeholders.
- 5.4.6 If trial trenching of a particular land parcel does not produce archaeological remains then only a paper archive will be generated for deposition. A summary report will still need to be produced, and will be submitted to the relevant HER.
- 5.4.7 The results of the evaluation in each site-specific or group site-specific area will be uploaded onto OASIS following completion and approval of the report for that area.
- 5.4.8 The digital archive will be uploaded to the Archaeology Data Service (ADS).
- 5.4.9 If the evaluation generates significant results then an accession number will be drawn, and the finds and paper archive will be deposited in line with the museum's guidelines.
- 5.4.10 The relevant Key Archaeological Stakeholders will be notified by email on final deposition.

6 Personnel

- 6.1.1 The archaeological subcontractor, or contracting joint venture, will be a Registered Organisation with the ClfA, with a proven track record of delivery of archaeological programmes for major infrastructure projects.
- 6.1.2 The archaeological subcontractor will designate a manager to fulfil the role of Lead Archaeologist for the trial trenching.
- 6.1.3 The manager will be responsible for:
 - end-to-end project management, including planning and safely delivering the fieldwork and ensuring delivery of post-excavation reports
 - detailed design of archaeological trial trenching, utilising available resources, including the LTC aerial mapping study and geophysical surveys in Kent
 - creating the programme for archaeological trenching in accordance with the agreed property access arrangements
 - assisting in the progress of the programme and the objectives within this specification and the WSI by attending all start-up and site meetings, as required
 - liaising with the LTC cultural heritage team and the assorted subconsultant specialists employed by LTC e.g. Palaeolithic and geoarchaeology specialists
 - have previous experience of having worked in Essex and/ or other areas where 'Thames gravels' are present
 - co-ordinating all archaeological trial trenching across the scheme
 - ensuring all fieldwork is undertaken in accordance with the agreed parcelspecific WSI
 - overseeing the post-excavation manager (below) in reporting and publication
 - will be the point of contact for heritage stakeholders such as the Historic England scheme lead and the local planning authority archaeological advisors
 - overseeing the transition of the fieldwork to the post-excavation reporting
 - ensure that the trial trenching is delivered on time and to the agreed budget
 - ensure Health and Safety standards are maintained on site
- 6.1.4 The manager will be appropriately qualified as set out in the Scheme-wide Specification for Trial Trenching (Highways England 2018).
- 6.1.5 Project Officers
- 6.1.6 The project officers will be responsible to the Lead Archaeologist, and will be responsible for:
 - the day-to-day running of the trial trenching in individual parcels, or groups of parcels as directed by the lead archaeologist
 - ensuring professional standards of work are maintained and the agreed scope of work in the WSI is adhered to
 - ensuring that all site work is carried out to the agreed programme

- collaborating with the lead archaeologist in hosting site monitoring visits from the local authority archaeological advisors and Historic England
- liaising with the LTC cultural heritage team and the assorted sub-consultant specialists employed by LTC e.g. Palaeolithic and geoarchaeology specialists
- liaising with the post-excavation manager, including ensuring the site records are handed over and are fit for purpose
- ensuring Health and Safety standards are maintained on site
- 6.1.7 The project officers will have the appropriate experience and qualifications listed in the Scheme-wide Specification for Trial Trenching (Highways England 2018).
- 6.1.8 Post-excavation Manager
- 6.1.9 The post-excavation manager will direct the post-excavation phase of the trial trenching, and will:
 - manage the post-excavation phase of the Project, under the supervision of the lead archaeologist
 - ensure the delivery of parcel-specific reports to the deadlines stipulated in the WSI
 - ensure the post-excavation work adheres to the WSI, current guidance and, technical standards and best practice
 - lead on the publication of the results, if appropriate
 - manage the production of the Project archive in line with the standards stipulated in the WSI
- 6.1.10 The Post-excavation Manager will be appropriately qualified as set out in the Scheme-wide Specification for Trial Trenching (Highways England 2018).
- 6.1.11 Site Supervisors and Archaeological Technicians
- 6.1.12 The Site Supervisors will:
 - be responsible to the Project Officers
 - direct a small team of Archaeological Technicians during the trial trench evaluation and assigning specific tasks
 - ensure that the trial trenches are located accurately, as agreed in the WSI
 - act as an archaeological banksman and direct the tracked excavator drivers in removing the overburden in the way stipulated in the WSI
 - ensure Health and Safety standards are maintained on site
- 6.1.13 The professional requirements and competencies will be as set out in the Scheme-wide Specification for Trial Trenching (Highways England 2018).

	During Channel Tunnel Rail Link works carried out by the Museum of London Archaeology Service								
	three groups of Iron Age pits were found. This is where the middle set of the three pits clusters were	1							
	found. Pottery and briquetage were found within the pits. The briquetage was in the form of final								
	transport containers, indicating salt was being brought to the area. One pit contained a near								
	complete La Tène I brooch dated to the 4th to 3rd centuries BC. A possible awl and two sharpening								
	tools were also found. Oxford Wessex Archaeology Joint Venture. 2006. The prehistoric, Roman and	i .

1847 Walkover			Earthen mound on southern side of footpath. Extent of feature is unclear.	Earthwork	Earthwork	Unknown		568332	169819
1848 Walkover			Shallow linear depression, possible former boundary or drainage ditch/ former watercourse.	Earthwork	Earthwork	Unknown		567892	173336
1849 Walkover			Linear depression. Raised ground in corner to SE and low bank along outside of northern edge.	Earthwork	Earthwork	Unknown		567870	173235
1850 Walkover			Shallow linear depression. Probable former drainage ditch or watercourse.	Earthwork	Earthwork	Unknown		567793	173411
1851 Walkover			Quarry. No access, barbed wire fence. However, edges of what appears to be large hole visible.	Earthwork	Earthwork	Unknown		568344	171243
1852 Walkover			Remnant of field boundary, only visible as low bank.	Earthwork	Earthwork	Unknown		568052	171363
1853 Walkover			Lighter area of vegetation, in slight hollo, possible old pond.	Earthwork	Earthwork	Unknown		566253	178636
			Find spot of potential terracotta pot of possible Roman origin spot date. Very coarse and rectangular		L				[
1854 Walkover		-	floor tiling?	Earthwork	Earthwork	Unknown		566762	178027
1855 Walkover			Circular depression in western part of field. Poss former quarry pit.	Earthwork	Earthwork	Unknown		565400	176520
1956 Walkerer			Possible earthworks. Earthen mound however, maybe depression/accumulation of earth possibly as		Farthwork	Hakaawa		FCC4.04	176606
1856 Walkover 1857 Walkover		+	a result of modern drilling activity. Raised platform earthwork.	Earthwork Earthwork	Earthwork Earthwork	Unknown	+	566181 566477	176606 176678
1858 Walkover		-	Possible quarry scoop in steep bank on northern side of field.	Earthwork	Earthwork	Unknown		568271	176994
1859 Walkover			Possible spot dated fragmented Roman pot find in ploughed field.	Earthwork	Earthwork	Unknown		562635	183685
1860 Walkover			Slightly raised ground in otherwise flat field- maybe of archaeological interest.	Earthwork	Earthwork	Unknown		562988	183101
1861 Walkover			Ridge in field- poss former field boundary or maybe modern service trench.	Earthwork	Earthwork	Unknown		567388	179772
1862 Walkover			NE SW gully/shallow valley in field.	Earthwork	Earthwork	Unknown		566155	179958
			Platform on top of ridge in undulating landscape. Platform doesnÔÇÖt appear natural when						
1863 Walkover			compared across wider landscape.	Earthwork	Earthwork	Unknown		565980	180031
1864 Walkover			Concrete platform.	Earthwork	Earthwork	Unknown		562612	182731
1865 Walkover			Former water channel ESE WNW orientation on west facing slope.	Earthwork	Earthwork	Unknown		569980	170120
			Small roadside ditch, likely for drainage on side of road between road surface and fence to plot of						
1866 Walkover			land on the west		Ditch	Unknown			
			Uneven ground with possible former field boundary banks. Possible former paddocks now replaced.						
4067 W-11			Banks form rough rectangular shape with possible internal squares. Small trees in field may have		Fauthorial	Halman			
1867 Walkover			associations as remaining extant features if boundaries. Possible platform	1	Earthwork	Unknown			
1868 Walkover 1869 Walkover			Former field boundary with possible associated banks which may be former enclosure		Platform Field boundary and earthworks	Unknown Unknown			
1870 Walkover			Platform in field		Earthwork	Unknown			
1871 Walkover			Depression at peak of undulations in field		Earthwork	Unknown			
1872 Walkover			Visible earth works, east West Bank and bowl features		Earthwork	Unknown			
1873 Walkover			Remnants of toilet block associated with RAF camp		Foundations	Modern			
1874 Walkover			WWII air raid shelter		Structure	Modern			
1875 Walkover			WW2 air raid shelter		Structure	Modern			
1876 Walkover			Area of probable quarrying activity		Quarrying	Unknown			
1877 Walkover			Potential quarrying activity creating large bowl feature in area.		Quarrying	Unknown

		Enclosure and linear features. A 2006 geophysical survey by GSB projection identified several linear							
		features and two rectilinear enclosures within the proposed Jeskyns Community Wood.							
		The northernmost of the two enclosures was aligned WNW-ESE and was located just west of a NNE-							
		SSW linear feature which may have formed part of a boundary or a trackway. This enclosure was not targeted by trial trenching but the other rectilinear enclosure to the south was targeted by trial							
		trenching (CAT 2007) and several features within it were dated to the first to 2nd century AD. It is							
		possible that this undated enclosure could also date to the early Roman period.							
		Another NNE-SSW aligned linear feature was recorded c.150m west of enclosure and may be							
3537 CAT 2007	EKE17456	associated. This may be a boundary ditch defining a field system associated with the enclosure.	Enclosure; Feature	Enclosed settlement	Unknown	Research			
		A 2006 geophysical survey by GSB projection identified several linear features and two rectilinear							
		enclosures within the proposed Jeskyns Community Wood.							
		This was followed by a trial trench evaluation which targeted some of the features identified by the							
		survey.							
		The southernmost rectilinear enclosure and an associated linear feature to the east was targeted by Trenches 24-32 of a trial trench evaluation in 2006 by Canterbury Archaeological Trust (CAT 2007).							
		The conditions were challenging and in several cases the linear features identified by the geophysical							
		survey were not identified within the trenches. However in Trench 30 the terminal end of ditch was							
		recorded along with a posthole. First to second century pottery was reordered on the surface of both	n						
	EKE19589 and	of these features. A NNE-SSW aligned ditch was also recorded within Trench 32 which matched the							
3538 CAT 2007	EKE17456	alignment of the geophysical survey results.	Enclosure; Feature	Enclosed settlement	Roman	Research

Southern Link

The Western Southern Link (WSL) is an alternative for Short List Routes 2, 3 and 4 to the south of the River Thames. The route would connect into the A2 to the east of Gravesend and would go to the west of Thong and Shorne and east of Chalk towards Church Lane and Lower Higham Road. This route could connect into any of the Routes 2, 3 and 4 north of the river utilising all the crossing options for these route options.
