Status of the Statement of Common Ground

This is a Draft Agreed Statement of Common Ground with matters outstanding.

National Highways and Transport for London agree that this draft Statement of Common Ground is an accurate description of the matters raised and the current status of each matter.

5.4.4.11 Statement of Common Ground between (1) National Highways and (2) Transport for London FOR ED1 ENDORSEMENT MJR.docx 248 KB

Start your reply all with: Thank you for your edits. Received, thank you. Thank you! Feedback

Please find attached a further version of the Statement of Common Ground. There are a handful of minor errors/changes that I have included as tracked changes. I have also responded to most of your remaining comments and added one or two comments too.

I can confirm that TfL endorses this version of the Statement of Common Ground but please do make the minor corrections in the final version submitted at Deadline 1.

Thanks,

Email to show that the above minor changes have been made and agreed with TFL

Start your reply all with: Sounds good, thanks! Wonderful, thank you! Oh, great, Thanks! Feedback

Hi [redacted]

That's fine, no further changes to the text needed for 2.1.21 – the time to update that would be at the next iteration. And thanks for letting me know about the other changes. So that's as far as I'm concerned.

Sent: 14 July 2023 12:39

Subject: FW: LTC/ Transport for London SoCG For Ed1 Endorsement with

Hi [redacted] – also just to advise that this last para will be removed in 2.1.31.

Nitrogen-deposition

General methodology/modelling/	2.1.31	The additional assessment on the impacts of nitrogen deposition, and associated compensatory areas is.	The assessment regarding nitrogen deposition has been updated following the revised traffic modelling becoming available and is included in.	ES Chapter 5: Air Quality Application.	Matter Agreed.

1 Introduction

1.1 Purpose of the Statement of Common Ground

- 1.1.1 This Statement of Common Ground (SoCG) has been prepared in respect of the Development Consent Order (DCO) application for the proposed A122 Lower Thames Crossing (the Project) made by National Highways Limited (National Highways) to the Secretary of State for Transport (Secretary of State) under section 37 of the Planning Act 2008 on 31 October 2022.
- 1.1.2 The SoCG has been produced to confirm to the Examining Authority where agreement has been reached between National Highways (the Applicant) and Transport for London, and where agreement has not been reached. Where matters are yet to be agreed, the parties will continue to work proactively to reach agreement and will update the SoCG to reflect areas of further agreement.
- 1.1.3 This version of the SoCG has been submitted at Examination Deadline 1.

1.2 Principal Areas of Disagreement

- 1.2.1 On 19 December 2022 the Examination Authority made some early procedural decisions to assist the Applicant, potential Interested Parties and themselves to prepare for the Examination of the Application.
- 1.2.2 One of these procedural decisions was to use a tracker recording Principal Areas of Disagreement in Summary (PADS).
- 1.2.3 The PADS Tracker would provide a record of those principal matters of disagreement emerging from the SoCG and should be updated alongside the SoCG as appropriate throughout the Examination with the expectation that a revised PADS Tracker should be submitted at every Examination deadline.
- 1.2.4 This SoCG should be read in conjunction with the Transport for London PADS Tracker.

1.3 Terminology

- 1.3.1 In the matters table in Section 2 of this SoCG, “Matter Not Agreed” indicates agreement on the matter could not be reached following significant engagement, and “Matter Under Discussion” where these points will be the subject of ongoing discussion wherever possible to resolve, or refine, the extent of disagreement between the parties. “Matter Agreed” indicates where the issue has now been resolved.

2 Matters

2.1 Movement of outstanding matters

- 2.1.1 Following submission of the previous version of this Draft SoCG between the Applicant and Transport for London, further discussions on the outstanding matters have taken place. These discussions are summarised in Table A.1 in Appendix A and the outcome of these discussions is summarised below.
- 2.1.2 The following matters have moved from ‘Matter Under Discussion’ to ‘Matter Agreed’:
- a. Item 2.1.13 Construction traffic impacts / Construction traffic management
 - b. Item 2.1.26 Traffic and economics / sensitivity test for Gallows Corner
 - c. Item 2.1.29 Wider Network Impacts / scope of monitoring
 - d. Item 2.1.31 General methodology / modelling/alternatives / nitrogen deposition
- 2.1.3 The following matters have moved from ‘matter under discussion’ to ‘matter not agreed’:
- a. Item 2.1.4 - Traffic / Local policy consideration
 - b. Item 2.1.11 Compensation / Costs and commuted sums for adoption
 - c. Item 2.1.16 Charging / charging regime
 - d. Item 2.1.30 Climate / construction and operational carbon emissions
- 2.1.4 Further to the matters raised in the original SoCG, Transport for London submitted further comments on the DCO application which has led to new matters being included in Table 2.1.
- The new matters are:
- a. Item 2.1.32 Modelling methodology / Robustness of traffic modelling
- 2.1.5 Table 2.1 details and presents the matters which have been agreed, not agreed, or are under discussion between (1) the Applicant and (2) Transport for London.
- 2.1.6 In Table 2.1 , relevant issues relating to the draft DCO articles and Requirements in Schedule 2 to the draft DCO have been identified under the heading ‘DCO and Consents’.
- 2.1.7 In the column ‘Item No’ in Table 2.1 , ‘Rule 6’ indicates a matter entered in the SoCG as a result of a request in the Rule 6 letter, ‘RRN’ indicates a matter entered into the SoCG as a result of content in the Relevant Representation, ‘RRE’ indicates an existing SoCG matter that was also raised in the Relevant Representation and ‘DL1’ indicates a new matter added during examination at/around that deadline.
- 2.1.8 At Examination Deadline 1 there are 32 matters in total, of which 9 are agreed, 8 are not agreed and 15 that remain under discussion.

Table 2.1 Matters

Topic	Item No.	Transport for London Comment	National Highways' Response	Application Document Reference	Status
DCO and consents					
Planning Classification of roads at junction 29	2.1.1	The Classification of Roads Plan and Part 3 of Schedule 5 of the withdrawn draft DCO provided some classification of roads affecting the TLRN, particularly the A127 eastbound off slip and westbound on slip at M25 junction 29. If the changes to these roads delivered as part of the scheme require these to become classified roads then the DCO should also deal with section 14B of the Highways Act 1980 and classify these slip roads as part of the TLRN.	A new subparagraph has been included in Article 15 classification of roads in the draft Development Consent Order (DCO) as follows: <i>'I the roads described in Part 3 (GLA roads) of Schedule 5 are GLA Roads as if they had become so by virtue of an order under section 14B (order of the authority changing what are GLA roads) of the 1980 Act specifying that date as the date on which they were to become GLA roads'</i> . Part 3 of Schedule 5 of the draft DCO has been amended to classify the A127 eastbound off-slip and westbound on-slip as GLA roads (part of the Transport for London Road Network).	Draft Development Consent Order (DCO) [Additional Submission AS-038]	Matter Agreed
Consultation Consultation in the capacity of highway authority, in particular detailed design and control plans	2.1.2	Several DCO requirements need to be amended so that Transport for London, as relevant highway authority for sections of highway network directly affected by the scheme – in addition to the planning authorities – is consulted on matters relevant to its functions for those sections of network and in particular detailed design (with fencing as a specific example), construction, operation and maintenance plans, traffic management and construction travel plans, as well as environmental	<i>Note: The Applicant's response to this matter has been updated to reflect changes proposed to the dDCO submitted at Deadline 1. The Applicant will seek to engage further with TfL on this matter and seek to move relevant elements to 'matters agreed' in a subsequent version of this SoCG subject to approval from TfL.</i> The Applicant has subsequently amended the Schedule 2 Requirements to make it clear that, where relevant, the highway authority is a consultee in addition to the local planning authorities, on matters relevant to its function.	Schedule 2 of the draft DCO [Additional Submission AS-038] <i>Note: the draft DCO has been revised at Deadline 1 and the</i>	Matter Under Discussion

Topic	Item No.	Transport for London Comment	National Highways' Response	Application Document Reference	Status
		<p>management plans and landscaping, ecology and surface water drainage.</p> <p>Transport for London welcomes the amendments made to the Schedule 2 Requirements but continues to seek for the relevant highway authority to be consulted on matters relevant to assets for which it will be responsible, namely for Requirement 3 (detailed design), Requirement 5 (landscaping and ecology), Requirement 6 (contaminated land and groundwater), Requirement 8 (surface and foul water drainage) and Requirement 12 (fencing). It is critical that Transport for London is consulted on matters relevant to assets it will become responsible for managing.</p> <p>The changes required to the draft DCO and associated documents to achieve this (with additional proposed text underlined) are:</p> <ul style="list-style-type: none"> Requirement 3 (1): "...unless otherwise agreed in writing by the Secretary of State following consultation by the undertaker with the relevant planning authority <u>and the relevant highway authority</u> on matters related to its functions..." 	<p>This includes Requirements 3 (detailed design) ,4 (construction and handover environmental management plans), 8 (surface and foul water), 10 (traffic management), 11 (construction travel plans), and 12 (fencing).</p> <p>Note that Transport for London is also named as a consultee in relation to Environmental Incident Control Plans and the written details of the traffic impact monitoring scheme.</p> <p>Additionally, in relation to maintenance and operational matters during construction, the Contractor delivering the works would seek to enter into a Detailed Local Operating Agreement or a Local Operating Agreement with Transport for London. The Project is reviewing what provision it needs to make in relation to the handing over of any assets to relevant local highway authorities including Transport for London and continues to liaise with Transport for London regarding this process.</p> <p>In relation to Requirement 5 (landscaping, ecology) it is proposed to consult with local planning authorities but not directly with local highway authorities. As set out in Matter 2.1.20 the Applicant considers the current provision made to invite 'appropriate parties' to be sufficient to ensure that Transport for London will be invited to meetings concerning land in which it has an interest. However, as noted above, Transport for London will be consulted on any assets it will become responsible for managing, e.g. to ensure</p>	<p><i>above linked document does therefore not currently show all the changes outlined in the Applicant's Response.</i></p>	

Topic	Item No.	Transport for London Comment	National Highways' Response	Application Document Reference	Status
		<ul style="list-style-type: none"> • Requirement 5: no changes required to the draft DCO but Transport for London to be added as a local highway authority to Table 2.1 of the Outline Landscape and Ecology Management Plan (APP-490) • Requirement 6 (1): "...it must be reported as soon as reasonably practicable to the Secretary of State, the relevant planning authority, <u>relevant highway authority</u> and the Environment Agency..." • Requirement 8 (1): "...have been submitted and approved in writing by the Secretary of State following consultation by the undertaker with the relevant planning authority <u>and relevant highway authority</u> on matters related to its function." • Requirement 12 (1) (b): "...following consultation by the undertaker with the relevant planning authority <u>and relevant highway authority</u> on matters relates <u>related</u> to its functions." <p>All of these changes are preceded in the M25 Junction 28 Improvements</p>	<p>that Transport for London is able to access and maintain the assets in future.</p> <p>In relation to Requirement 6 (contaminated land and groundwater), the Applicant does not consider that the 'relevant highway authority' needs to be consulted on matters related to previously unidentified contaminated land or groundwater. The relevant authorities for this matter are the planning authority and the environment agency as already included in Requirement 6.</p> <p>If Transport for London has any specific concerns that it would like to raise regarding landscaping, ecology and contaminated land and groundwater, the Applicant will be happy to discuss the matter further.</p> <p>In addition to the above, the parties are in discussion in relation to the proposed side agreement in an attempt to address issues raised by TfL.</p>		

Topic	Item No.	Transport for London Comment	National Highways' Response	Application Document Reference	Status
		DCO where Transport for London is a relevant highway authority. Transport for London is prepared to consider these issues being covered in a side agreement if National Highways is unwilling to specify that local highway authorities are to be consulted on these matters in the DCO.			
Need for the Project					
Benefits of the Project Principle of the development	2.1.3 RRE	In principle, Transport for London is supportive of the Project, subject to being satisfied that it will not result in a significant increase in the number of additional car or goods vehicle trips being generated within London and that any adverse impacts on sections of the capital's road network are adequately mitigated.	The Applicant is appreciative of the support for the Project offered by Transport for London.	N/A	Matter Agreed
Planning Statement/policy					
Traffic Local policy considerations	2.1.4	Transport for London's interest in the Project is predominantly based on the potential impact on the TLRN and local borough roads, including the wider negative impacts that arise from this, and ensuring that, with regard to its impact on London, it does not conflict with the Mayor's Transport	The Project is a Nationally Significant Infrastructure Project and therefore must in the first instance demonstrate accordance with the adopted National Policy Statement for National Networks. The Planning Statement and the Transport Assessment refer to the local policy context for the Project and articulate the relationship between the Project and local policy. Following a meeting on 1 March 2023, Transport	Planning Statement [Application Document APP-495] Transport Assessment [Application	Matter Not Agreed

Topic	Item No.	Transport for London Comment	National Highways' Response	Application Document Reference	Status
		<p>Strategy, and/or adopted 2021 London Plan.</p> <p>While Transport for London considers there to be several areas of non-compliance, it has particular concerns that the Project does not comply in the following two policy areas. The Project does not comply with London Plan Policy T4 (Assessing and mitigating transport impacts) in the absence of any commitment of the Applicant to mitigate the adverse traffic impacts of the scheme. It also does not comply with London Plan Policy SI2 (minimising greenhouse gas emissions) and Mayor's Transport Strategy Policy 7 (Achieving a zero carbon city and good air quality) as the Project is not proposing any measures to seek to reduce operational carbon emissions from road users.</p>	<p>for London supplied queries on the Planning Statement.</p> <p>The Applicant acknowledges TfL's additional comment and will consider a response for inclusion in a subsequent version of this SoCG.</p>	<p>Document APP-529</p>	
Route selection, modal alternatives and assessment of reasonable alternatives					
Route selection	2.1.5	Transport for London does not have any significant concerns about the option assessment process and therefore agrees with the proposed route alignment.	Noted.	N/A	Matter Agreed
Route alignment					
Consultation and engagement					

Topic	Item No.	Transport for London Comment	National Highways' Response	Application Document Reference	Status
Adequacy of consultation	2.1.6	Transport for London is satisfied with the adequacy of consultation undertaken to date on the Project.	Noted.	N/A	Matter Agreed
Land and compulsory acquisition					
Land acquisition Permanent vs temporary acquisition	2.1.7 RRE	<p>Transport for London owns the freehold of certain parcels of land within the DCO application boundary around J29 of the M25 and relating to the A127.</p> <p>The Land Plans from the previous application documents shared with Transport for London (October 2020) showed most of the land west of the roundabout within the order limits and the TLRN as it passes the roundabout as permanent acquisition. This would suggest that National Highways intends to take on responsibility for this part of the A127. However, the draft DCO that was submitted shows that National Highways are not intending to reclassify any part of the main carriageway of the A127. Permanent acquisition is therefore not required and the powers sought should be for temporary possession only at most but even those powers should be limited.</p> <p>Where the Applicant considers it needs to acquire Transport for London</p>	<p>The land use to the west of junction 29 has been amended to address these concerns and the majority of Transport for London's titles are now temporary use. There remain some areas where the Project requires temporary possession of land with the permanent acquisition of new rights for the diversion of utilities. Permanent acquisition of land is also required for a small section of route alignment and for the construction of the new walking, cycling and horse riding (WCH) bridge structure to the west of junction 29. It is agreed that the Applicant and Transport for London will progress discussions to return any permanently acquired land to Transport for London post construction, including the proposed WCH structure which Transport for London shall be responsible for maintaining.</p> <p>These issues were discussed at a meeting on 17 December 2021 (with subsequent communications between the Applicant and Transport for London Land & Property specialists) and the requirements for permanent acquisition of rights were explained and accepted. At the 2022 Local Refinement Consultation, Transport for London reported that the latest acquisition plans</p>	<p>Sheets 45 & 46 of the Land Plans [Additional Submission AS-010]</p>	Matter Under Discussion

Topic	Item No.	Transport for London Comment	National Highways' Response	Application Document Reference	Status
		<p>highway land or rights over such land to deliver the Project, Transport for London requires that such land over which Transport for London will remain highway authority should be returned to Transport for London's ownership at no cost following completion of the works. Transport for London raised this matter in its relevant representation where it requested an amendment to the draft DCO, for this provision, but following discussions is now willing to consider its requirements on these matters being included in a side agreement with the Applicant.</p>	<p>provided by the Applicant address many of the concerns previously raised.</p> <p>Details of the land required for the WCH bridge were discussed at a meeting on 20 March 2023 with land and property specialists and legal representatives from Transport for London and the Applicant present. A draft side agreement between the Applicant and Transport for London is currently being discussed which will include details of the mechanism for transfer of land between the Applicant and Transport for London and the land requirements.</p> <p>It is agreed that the above-mentioned discussions on the final ownership and potential return of acquired land will occur post-DCO consent.</p>		
<p>Impacts</p> <p>Impact of the Project on existing and future Transport for London assets</p>	<p>2.1.8 RRE</p>	<p>Transport for London notes that any works to the TLRN are subject to article 10 of the draft DCO which provides that any highway or works to highway should be constructed to the reasonable satisfaction of the local highway authority and unless otherwise agreed with the local highway authority it will be maintained by and at the expense of the local highway authority from its completion. Transport for London is also discussing a side agreement with National Highways which may cover arrangements for handing over of</p>	<p>As noted by TfL, the parties are in discussion in relation to the proposed side agreement in an attempt to address issues raised by TfL.</p> <p>The Applicant's 's position in respect of TfL's request regarding commuted sums is set out in item 2.1.11 of this SoCG.</p>	<p>Draft DCO [Additional Submission AS-038]</p>	<p>Matter Under Discussion</p>

Topic	Item No.	Transport for London Comment	National Highways' Response	Application Document Reference	Status
		<p>assets to Transport for London. Transport for London also notes that, for any new or altered works or assets which it will be required to manage and maintain, arrangements need to be made to address any additional expense which it might incur in respect of the same by way of a commuted sum from National Highways.</p>			
<p>Impacts</p> <p>New assets outside the highway boundary</p>	<p>2.1.9 RRE</p>	<p>If there are any new assets outside the existing highway boundary that Transport for London is required to take responsibility for as part of the DCO, for example drainage infrastructure or environmental mitigation, then a clear understanding of the maintenance boundary, liabilities and split of responsibilities will be essential (notwithstanding any views Transport for London may have on the acceptability of such proposals). Transport for London would also expect to be involved in the design of any new assets which it is expected to take responsibility for to ensure that those assets are designed and delivered in a manner which is consistent with Transport for London's management and maintenance capabilities.</p>	<p>Discussions regarding the split between Transport for London and certain National Highway assets i.e. drainage and street lighting have been held. At this point in time, the Applicant cannot provide the proposed extent of the strategic road network and therefore the split in assets. However, through the detailed design process, Transport for London as local highway authority will have an opportunity to comment on designs for assets that are to be transferred, therefore that point would be the best time to set the exact location of the split.</p> <p>In addition to the above, the parties are in discussion in relation to the proposed side agreement in an attempt to address issues raised by TfL.</p>	<p>N/A</p>	<p>Matter Under Discussion</p>

Topic	Item No.	Transport for London Comment	National Highways' Response	Application Document Reference	Status
		<p>Transport for London is discussing a side agreement with National Highways which may cover Transport for London's role in the design of assets it will become responsible for.</p>			
<p>Utilities</p> <p>Utility works rights and management under the DCO</p>	<p>2.1.10</p>	<p>If any major utility diversions or works are required under the TLRN for the Project then Transport for London will need to be closely involved in reviewing and approving the design and construction of such diversions or works, including any future management and maintenance arrangements.</p> <p>Transport for London is satisfied that works affecting traffic management on its road network are adequately set out in the outline Traffic Management Plan for Construction and that Transport for London's role in traffic management is clear and sufficient.</p> <p>Transport for London is discussing a side agreement with National Highways which may cover Transport for London's role in the design of utility diversions.</p>	<p>The Applicant confirms that Transport for London will be consulted prior to the commencement of utility works that will interface with the highway where Transport for London are the highway authority. At a meeting on 1 March 2023, the Applicant confirmed that utility works would be classed as highway design, and that Transport for London would be able to check reinstatements.</p> <p>The Project recognises the strategic importance of M25 junction 29 and its sensitivity in traffic terms. Matters relating to traffic management for the utility diversions and other works will be detailed in the Traffic Management Plan (TMP) for the works, to be prepared post-DCO grant. The outline Traffic Management Plan for Construction, which forms part of the planned DCO application, identifies Transport for London as a consultee on the TMP prior to its approval by the Secretary of State. The TMP must be implemented by the Applicant and its Contractors.</p> <p>As set out in the outline Traffic Management Plan for Construction, the Applicant proposes to set up a monthly Traffic Management Forum (TMF), following the granting of the DCO. The TMF would consist of the main works contractors, utility companies, local authorities, statutory bodies,</p>	<p>Outline Traffic Management Plan for Construction [Application Document APP-547]</p>	<p>Matter Under Discussion</p>

Topic	Item No.	Transport for London Comment	National Highways' Response	Application Document Reference	Status
			<p>local highway authorities including Transport for London, public transport operators, emergency services, the Applicant's maintenance providers and any other affected stakeholders depending on the planned construction phases. The TMF would review planned traffic management arrangements and receive comments as to their appropriateness. As noted by TfL, the parties are in discussion in relation to the proposed side agreement in an attempt to address issues raised by TfL.</p>		
<p>Compensation</p> <p>Costs and commuted sums for adoption</p>	<p>2.1.11 RRE</p>	<p>Transport for London is seeking to recover its costs associated with delivery of the Project (including through the DCO process and detailed design) from National Highways, together with a commuted sum to cover the substantial increase in its management and maintenance costs resulting from the new and modified assets for which Transport for London is required to take responsibility for in the DCO.</p> <p>Unlike highway authorities outside London, Transport for London does not receive highway funding from the Department for Transport. This is demonstrated by the DfT's website. It confirms: "Transport for London (TfL) do not receive these funding streams for the maintenance of their local</p>	<p>The maintenance of both local highways and the strategic road network is funded by the Department for Transport. Local highway funding is mainly based on a formula linked to the total mileage of A roads, B and C roads, and unclassified roads in each area, together with the numbers of bridges, lighting columns, cycleways and footways. This funding is refreshed every few years to take account of changes in road length and number of highway structures. Accordingly, as local highway works are carried out under the DCO, the amount of funding that each local highway authority receives will be amended to recognise these additional responsibilities. Given that this process already exists, it is not appropriate to require the Applicant to provide funding for the maintenance of parts of the local network out of the money given to it to maintain the strategic road network.</p>	<p>Draft DCO [Additional Submission AS-038]</p>	<p>Matter Not Agreed</p>

Topic	Item No.	Transport for London Comment	National Highways' Response	Application Document Reference	Status
		<p>highways.” This is available at https://www.gov.uk/government/publications/highways-maintenance-funding-allocations/highways-maintenance-and-itb-funding-formula-allocations-2022-to-2025 dated 15 March 2023 (accessed on 20 June 2023).</p> <p>Transport for London therefore has to fund the future maintenance of any highway assets not previously forming part of its road network which are proposed to be transferred to Transport for London under the draft order.</p> <p>Transport for London urges National Highways to follow the precedent in the M25 Junction 28 Improvements DCO where the Secretary of State decided to include protective provisions for Transport for London that specify that National Highways must pay Transport for London’s costs and a Commuted Sum. See Protective Provisions 71 to 73 in Schedule 9, Part 7 of that DCO.</p>	<p>The Applicant recognises that Transport for London may have different funding arrangements than those highways authorities outside London. However, the Applicant’s position is that it does not provide commuted sums to local highway authorities for any assets it provides as part of its major projects programme.</p> <p>Article 10(1) of the draft DCO provides that where a new local highway is constructed, it must be completed to the reasonable satisfaction of the local highway authority, who becomes responsible for its maintenance from completion. Note that the proposed draft side agreement would also provide appropriate provisions in respect of the maintenance period by the Applicant. Article 10(2) makes similar provision for alterations or diversions of existing local roads. Both provisions enable the Applicant and the local highway authority concerned to reach different arrangements for specific maintenance responsibilities, but otherwise the default position is that once the local highway authority is satisfied that the highway has been properly completed, it becomes responsible for the maintenance of these highways just as it is for other public highways in its area.</p> <p>This arrangement is well-precedented for local highway works carried out by the Applicant in connection with NSIP schemes. It strikes an appropriate balance between the Applicant’s ability to carry out its works, and local highway</p>		

Topic	Item No.	Transport for London Comment	National Highways' Response	Application Document Reference	Status
			<p>authorities' duties to maintain public highways in their areas.</p> <p>The Applicant acknowledges TfL's additional comment and will consider a response for inclusion in a subsequent version of this SoCG.</p>		
Construction					
<p>Safety</p> <p>Construction vehicle safety</p>	2.1.12	<p>Transport for London requests that the Project sets out how its construction vehicle safety standards will support Transport for London's commitment to achieving its "Vision Zero" safety goal.</p> <p>Any vehicle used for construction of the Project over 12 tonnes gross vehicle weight and entering or operating in Greater London must hold a valid HGV Safety Permit. From October 2024, such vehicles will need to be Direct Vision Standard rated as 3 star or above, or fit a Progressive Safe System to operate in Greater London.</p> <p>Transport for London considers that, while the above requirements are only legally required within Greater London, the same standards should be applied to construction vehicles over 12 tonnes gross vehicle weight</p>	<p>Commitments to safety are contained within Section 6.1 of the Code of Construction Practice (CoCP).</p> <p>The Contractors will produce Construction Logistics Plans and will be required to implement directly and through their sub-contractors and suppliers, the following standards:</p> <p>a. Construction Logistics Community Safety (CLOCS) – A national standard of planning the supply routing and management of sites to reduce risk to vulnerable road users.</p> <p>b. Freight Operator Recognition Scheme (FORS) (Silver or above) – A national standard of managing vehicle fleets and driver training to reduce risk to vulnerable road users.</p> <p>c. Driving for Better Business – A national standard of reducing risk to professional drivers.</p> <p>The Applicant will also implement HGV bans on several areas around the Project. A Traffic Management Forum will be one of several</p>	<p>ES Appendix 2.2: Code of Construction Practice [Application Document APP-336]</p>	<p>Matter Under Discussion</p>

Topic	Item No.	Transport for London Comment	National Highways' Response	Application Document Reference	Status
		across the entire Lower Thames Crossing project to protect the safety of all road users.	<p>channels open to stakeholders to raise traffic safety concerns that arise during construction.</p> <p>Further discussion on this matter has taken place. The Applicant does not consider it necessary for the CoCP to cover the Direct Vision Standard and HGV Safety Permit as these are legal requirements for HGVs to operate in London. The Applicant has confirmed that contractors must implement all of CLOCS, FORS and Driving for Better Business (or equivalents). Paragraph 2.2.4 of the CoCP states that "In addition to having management systems certified for environment (ISO14001:2015), the Contractors will have management systems certified for safety (ISO 45001:2018) and quality (ISO 9001:2015), and these will include requirements for procedures for responding to emergency events. Contractors will be required to comply with the law applicable at the time, along with any additional environmental controls imposed in the DCO. For that reason, the statutory requirements are not separately listed within this CoCP."</p> <p>The Applicant acknowledges TfL's additional comment made under in and will consider a response for inclusion in a subsequent version of this SoCG.</p>		
Construction traffic impacts	2.1.13	Transport for London requests that the Project manages and mitigates the negative impact of construction on local communities. It is essential that a robust plan is developed to	The Project has produced an outline Traffic Management Plan for Construction, which sets out the principles for the management of construction traffic and how detailed plans will be developed in consultation with the local transport	Outline Traffic Management Plan for Construction	Matter Agreed

			temporary traffic management). Their role would include oversight of and coordination with third-party project construction activities to minimise the impacts on the public and stakeholders.'		
<p>Construction traffic impacts</p> <p>Construction traffic impacts on the wider network</p>	2.1.14	<p>Transport for London acknowledges that National Highways has provided some detail on likely traffic impacts arising during construction of the Project and this goes some way to outlining how construction will be delivered, but Transport for London requires further detail to enable the necessary understanding of the implications on its network.</p> <p>Transport for London is satisfied that the information provided in the GIS shapefiles sufficiently covers the forecast impacts on Transport for London's road network based on the strategic model used. However, TfL has concerns about the ability of the strategic model to forecast such impacts robustly within London given the coarse zoning system used which will result in some local traffic missing from the network (see item number 2.1.32).</p>	<p>The Applicant has produced a Transport Assessment which covers the impact on the Transport for London network. The Transport Assessment was shared with all key stakeholders including Transport for London, along with the rest of the withdrawn DCO application documents in December 2020. An updated version of this document will be submitted as part of the application. The Project has shared the GIS shapefiles based on construction traffic modelling for the 11 phases of construction to facilitate understanding the predicted impacts further. This matter is under discussion pending further review by Transport for London.</p> <p>The Applicant acknowledges TfL's additional comment and will consider a response for inclusion in a subsequent version of this SoCG.</p>	<p>Transport Assessment [Application Document APP-529]</p>	<p>Matter Under Discussion</p>

Topic	Item No.	Transport for London Comment	National Highways' Response	Application Document Reference	Status
Operation and maintenance					
Traffic Operational traffic management	2.1.15	<p>Transport for London would like to understand what measures are being taken to ensure the resilience of the highway network and detail regarding the management of the wider network in the event of an accident, ensuring this does not result in significant volumes of traffic using the road network in London to cross the river.</p> <p>Transport for London seeks clarification of the strategic diversion plans to be in place for the Project, Dartford Crossing and the neighbouring SRN after the Project opens to traffic.</p> <p>Transport for London is specifically seeking to understand the diversion routes that would be advised in the event of a closure of the Dartford Crossing once the Lower Thames Crossing is operational. This is not specified in the application document on the Need for the Project (Application Document APP-494).</p>	<p>As with the wider strategic road network, the Project will be patrolled by Traffic Officers and managed through the Regional Operations Centre (ROC) at Godstone in Surrey. In the event of an incident occurring on the strategic road network the ROC will liaise with the various emergency services, Traffic Officers, the Applicant's network maintainers and other network authorities including Transport for London to ensure that any delays are kept to a minimum and that incidents are cleared within the Applicant's response times. In addition, Variable Message Signs will advise motorists of traffic conditions so that that they can adjust their journeys to suit.</p> <p>In paragraph 5.2.6 of 'Need for the Project', further details are given on the Lower Thames Crossing as an alternative route: 'The Project would provide an alternative route to the Dartford Crossing for local and strategic traffic wishing to cross the river east of London. This would give people more choice when deciding how they want to cross the river east of London, but would also provide an alternative in the case of major incidents or closures at the other River Thames crossings.'</p> <p>Also discussed in paragraphs 5.2.7 to 5.2.9 are the policy context, road network resilience, the additional resilience the Project would provide, and the limited resilience of Dartford Crossing.</p>	Need for the Project [Application Document APP-494]	Matter Under Discussion

Topic	Item No.	Transport for London Comment	National Highways' Response	Application Document Reference	Status
			The Applicant acknowledges TfL's additional comment and will consider a response for inclusion in a subsequent version of this SoCG.		
Charging					
Charging regime	2.1.16	<p>Transport for London notes the proposed charging regime for the Project. While Transport for London does not object to the planned charging regime, it notes that it provides little flexibility to manage traffic demand and the consequential impacts on carbon emissions, air quality, etc. Transport for London suggests that National Highways should review the proposed charging regime against alternatives, for example more flexible regimes like that planned for the Silvertown Tunnel, to ensure the optimum approach to charging is being adopted.</p> <p>Transport for London notes that the Road User Charging Statement (Application Document APP-517) provides little information on the decision making about the charging regime. It simply states that a flexible charging regime was ruled out without explaining in detail the advantages and disadvantages of each option.</p>	<p>In the 2018 Statutory Consultation comments were invited on charging flexibility in particular in relation to:</p> <ul style="list-style-type: none"> • Charge amounts • Charged and non-charged hours • Application of peak charges • Vehicle classifications • Emissions-based charging • Accounts, discounts and exemptions <p>The majority of local authority stakeholders that commented on charging flexibility stated that their preference was for the Project's charges to mirror those at Dartford. The Applicant supported this preference on the grounds of economies of scale, the performance of the Project and better customer experience.</p> <p>Following review of the charging proposals made in the DCO submission, TfL has advised that the matter should be moved to Not Agreed.</p> <p>The Applicant acknowledges TfL's additional comment and will consider a response for inclusion in a subsequent version of this SoCG.</p>	Road User Charging Statement [Application Document APP-517]	Matter Not Agreed

Topic	Item No.	Transport for London Comment	National Highways' Response	Application Document Reference	Status
		Transport for London considers that it is incumbent on the Applicant to outline the advantages and disadvantages of various charging options to support any decision on whether or not to implement a more flexible charging regime.			
Air quality					
Monitoring Operational air quality monitoring	2.1.17 RRE	<p>Transport for London is of the view that the A127 west of M25 junction 29, where there is a large increase in traffic flows, should be included in the scope of the wider network impacts management and monitoring plan. The need for air quality monitoring is particularly justified because of Transport for London's concerns about the robustness of the traffic modelling on which the air quality assessment is based. There is therefore considerable scope for air quality impacts in London to vary significantly from those forecast. The scope of the plan should include monitoring of air quality where there are sections of road with significant increases in traffic forecast.</p> <p>Ultimately, the uncertainties and concerns associated with the traffic modelling are similarly relevant for air</p>	<p>The Applicant is following the advice of Design Manual for Roads and Bridges LA 105 Air Quality (Highways England, 2019) with regard to operational air quality monitoring. The Applicant would only propose to undertake monitoring if its assessment predicted significant air quality effects which triggered the requirement for mitigation, which is not the case. The purpose of the monitoring would be to determine when and if the mitigation (for example speed restrictions) can be removed.</p> <p>Using operational monitoring to validate air quality predictions in the EIA can be challenging as it can be difficult to differentiate the contribution of the Project from the baseline. Weather conditions also have significant influence on air quality, and changes in air quality year on year are influenced by the weather.</p> <p>Post-completion monitoring is not intended to be provided in this package of works and therefore the Applicant will not commit to it at this stage.</p>	<p>Environmental Statement Chapter 5 Air Quality [Application Document APP-143] Combined Modelling and Appraisal Report [Application Document APP-518] Environmental Statement Appendix 5.1 – Air Quality Methodology [Application</p>	Matter Not Agreed

Topic	Item No.	Transport for London Comment	National Highways' Response	Application Document Reference	Status
		<p>quality and make it essential that an ongoing monitoring and mitigation strategy is in place to ensure that any adverse air pollution impacts that arise are adequately addressed.</p>	<p>The Project's transport model has been produced in line with DfT guidance (Transport Analysis Guidance) as set out in the Combined Modelling and Appraisal Report.</p> <p>The Applicant has engaged with TfL to understand its concerns regarding the Project's transport model and has shared detailed outputs to enable the authority to gain an understanding of the forecast impacts of the Project on the road network. This engagement will continue during the examination of the Project with updates reflected in the Statement of Common Ground between the Applicant and TfL. As described in paragraphs 5.3.151 to 5.3.158 of the Environmental Statement Chapter 5 Air Quality, uncertainties associated with the air quality assessment have been addressed as far as practicable in the assessment and are not considered to adversely affect the adequacy of the assessment. For example, the air quality dispersion model annual mean nitrogen dioxide (NO₂) predictions have been compared and verified against 241 roadside air quality monitoring sites as described in 6.3 Environmental Statement Appendix 5.1 – Air Quality Methodology. Following this verification process an overall root mean square Error value of 5.8µg/m³ was derived for the Project air quality model, which is well within the Local Air Quality Management Technical Guidance (TG22) (Defra 2022) recommended root mean square Error value of 10µg/m³. Uncertainty in future</p>	<p>Document APP-345 Environmental Statement – Appendix 5–6 - Project Air Quality Action Plan [Application Document APP-350].</p>	

Topic	Item No.	Transport for London Comment	National Highways' Response	Application Document Reference	Status
			<p>vehicle emission factors and roadside NO2 concentrations has been considered by carrying out a gap analysis, as described in paragraphs 5.3.93 to 5.3.97 of Environmental Statement Chapter 5 Air Quality. This process provides a less optimistic prediction of future air quality compared to the Defra modelling tools.</p> <p>As described in Environmental Statement Chapter 5 Air Quality there are expected to be no significant air quality effects in relation to human health receptors and compliance with Limit Values, and therefore in line with the advice of DMRB LA 105 (Highways England (2019)). Design Manual for Roads and Bridges, LA 105 Air Quality), mitigation and monitoring is not required for the Project in relation to these effects. Significant air quality effects have been predicted as a result of nitrogen deposition in biodiversity sites, and the mitigation measures identified are described in 6.3 Environmental Statement – Appendix 5–6 - Project Air Quality Action Plan. Therefore, an ongoing monitoring and mitigation strategy is not required in relation to air quality.</p>		
Assessment of likely significant events	2.1.18 RRE	Transport for London considers it necessary to demonstrate that there are no adverse effects on air quality on the TLRN, which would conflict with local air quality policy and could lead	The air quality assessment is presented within Environmental Statement (ES) Chapter 5: Air Quality, and has concluded that there are no significant effects on human health receptors. Furthermore, the Project does not delay compliance with the Air Quality Directive. No	ES Chapter 5: Air Quality [Application Document APP-143]	Matter Under Discussion

			<p>necessary to control construction noise and vibration in accordance with current guidance. This complies with Policy D14 Noise of The London Plan 2021 "...avoiding significant adverse noise impacts on health and quality of life" through implementation of the above best practice measures.</p> <p>These REAC commitments are secured under Schedule 2 Requirement 4 of the draft Development Consent Order (DCO).</p>		
Population and human health					
Public transport	2.1.22	Transport for London considers that National Highways should consider, as part of the Project, what targeted interventions it might make to improve bus performance and reliability and so help shift some trips away from car.	The Applicant currently has no plans to provide targeted interventions to improve bus performance and reliability as part of the Project. The Wider Network Impacts Management and Monitoring Plan sets out how the Project would work with Transport for London and DfT to examine potential schemes on the wider road network following monitoring after the Project opens.	Wider Network Impacts Management and Monitoring Plan [Application Document APP-545]	Matter Not Agreed
Maintenance Walking cycling and horse riding (WCH)	2.1.23 RRE	1) At 2020 Supplementary Consultation, Transport for London expressed concern that the pedestrian and cycle route across M25 junction 29 would in future be limited to the north side of the junction. Provision was proposed by National Highways	The Applicant notes Transport for London's endorsement of its new bridge proposal and that it improves connections to the corridor from Upminster/Cranham to the future community forest site at Hole Farm to the north-east. The Applicant further notes that the Project has completed an assessment of the impacts on	N/A	Matter Under Discussion

Topic	Item No.	Transport for London Comment	National Highways' Response	Application Document Reference	Status
crossing west of M25 junction 29		<p>to be made for a new, high-quality link from the north to the south side of the A127 to the east of the junction, but no such link was proposed across the A127 to the west of the junction. This would result in pedestrians and cyclists travelling to and from Cranham needing to make an at-grade uncontrolled crossing of both carriageways of the A127 at the Front Lane junction to be able to travel east-west across M25 junction 29.</p> <p>In its response to the 2022 Local Refinement Consultation, Transport for London welcomed the decision to include a new bridge over the A127 west of the M25 to resolve this concern and address a historic severance between Folkes Lane and Moor Lane created by the A127. Transport for London requests details of the bridge, in order to assess the design, construction and maintenance implications of what is proposed, determine the acceptability of these and identify any potential issues including for the ongoing maintenance regime and associated funding.</p> <p>2) Transport for London is reviewing whether sufficient land is included within the Order Limits to allow</p>	<p>walkers, cyclists and horses riders. All rights of way have been maintained either by a diversion or new route. A meeting was held on 17 January 2023 to discuss initial ambitions for the bridge design, and the Applicant will continue to work with Transport for London and the London Borough of Havering to discuss details relating to design, construction and maintenance implications as they become available at detailed design stage. Transport for London has been informed that in accordance with established principles, the bridge would become theirs to maintain.</p> <p>The Applicant notes TfL's review of land as set out under 2). The applicant considers that there is sufficient land included within the DCO boundary for maintenance of the new bridge.</p> <p>The Applicant's position on commuted sums is given in matter 2.1.11.</p>		

Topic	Item No.	Transport for London Comment	National Highways' Response	Application Document Reference	Status
		efficient maintenance of the new bridge. Transport for London expects the costs for future maintenance to be funded by National Highways in the form of a commuted sum (see item number 2.1.11 above).			
WCH/active travel – construction effects Temporary diversion of footway	2.1.24	Transport for London notes the proposed temporary closure of the footway that runs along the north side of the A127 eastbound off-slip during construction of the new bridge, and supports pedestrian access being maintained via a temporary local diversion during this period. Discussion is encouraged with relevant stakeholders to ensure an acceptable route is provided.	The Applicant agrees with this suggestion. During construction of the new bridge, when the footway is closed, pedestrian access would be maintained via a temporary local diversion along an area of land immediately next to the existing path on land controlled by the Project. The implementation would be discussed with stakeholders in the channels established in the outline Traffic Management Plan for Construction, e.g. the Traffic Management Forum. The Applicant welcomes Transport for London's endorsement of this approach.	Outline Traffic Management Plan for Construction [Application Document APP-547]	Matter Agreed
Traffic and economics					
Modelling methodology Robustness of traffic modelling	2.1.32 RRN	Transport for London is concerned about the robustness of the strategic traffic modelling within London. The model zoning has been aggregated within London compared to the source models used to create the Lower Thames Area Model. This results in short distance local trips being omitted from the model, and congestion therefore being underestimated at key junctions, including for areas in close	The Project's transport model has been produced in line with DfT guidance (Transport Analysis Guidance (TAG)) as set out in the 7.7 Combined Modelling and Appraisal Report. The Applicant has engaged with TfL to understand its concerns regarding the Project's transport model and has shared detailed outputs to enable the authority to gain an understanding of the forecast impacts of the Project on the road network. This engagement will continue during the examination of the Project with updates reflected	Combined Modelling and Appraisal Report [Application Document APP-518] Combined Modelling and	Matter Under Discussion

Topic	Item No.	Transport for London Comment	National Highways' Response	Application Document Reference	Status
		<p>proximity to the Project. This undermines confidence in the ability of the model to serve as the only basis for determining the need for mitigation of operational traffic, air quality and noise impacts.</p> <p>For a highway scheme of this scale there is inevitably a degree of uncertainty about the pattern of future traffic flows caused by the Project, which no modelling undertaken 7 or more years beforehand, however robust, could fully anticipate.</p>	<p>in the Statement of Common Ground between the Applicant and TfL.</p> <p>The zoning system for the transport model is described in Combined Modelling and Appraisal report – Appendix B – Transport Model Package. Closer to the proposed alignment of the Project the zones cover a smaller area and as the distance from the Project increases the zones become larger. The number and pattern of trips in the transport model is primarily taken from mobile phone data and traffic counts. The model is validated by comparing the forecast traffic flows with observed counts as reported in the Transport Model Package.</p> <p>The Applicant therefore does not agree with the suggestion that the size of the zones has led to an underprediction of traffic flows at key junctions.</p> <p>The Applicant's response to air quality mitigation is given under item 2.1.17, and the response to noise mitigation will be considered under item 2.1.21.</p> <p>Growth within the transport model is in line with TAG and is capped on a regional basis in line with DfT traffic forecasts as set out in their National Trip End Model and published as TEMPro 7.2 traffic growth forecasts.</p> <p>The forecast changes in traffic flows are based on the appropriate guidance, as set out above. Over time, further developments will be brought forward</p>	<p>Appraisal report – Appendix B – Transport Model Package [Application Document APP-520].</p>	

Topic	Item No.	Transport for London Comment	National Highways' Response	Application Document Reference	Status
			in the region, local plans will evolve and economic changes will occur (such as fuel price changes). As a consequence, there is always a level of uncertainty, but this is an accepted element within TAG.		
Local modelling requests Erosion of benefits over time	2.1.25	<p>Transport for London observed that opening benefits of traffic alleviation could be eroded over time as there is less certainty for the degree to which the LTC will improve traffic conditions where growth is more than the assumptions used, or through poor control of the volume of vehicles using the LTC. This could have significant implications for the surrounding road network and people living in neighbouring communities.</p> <p>Transport for London requested additional detail on the extent to which an appropriate level of certainty has been developed for the proportion of traffic that would use the Blackwall Tunnel.</p> <p>Transport for London has reviewed the outputs of sensitivity tests provided by National Highways which have provided further information on the impacts of the Project on traffic flows at the Blackwall and Silvertown tunnels. These sensitivity tests have provided TfL with sufficient</p>	<p>The Applicant points out that in relation to the forecasts used within the transport model, these have been built in line with government Transport Analysis Guidance (TAG) and are capped in line with National Trip End Model (NTEM) forecasts. While it is clear that traffic growth will, over time, increase at the Dartford Crossing, there remains a significant reduction against the Do Minimum scenario. This has been clearly shown in consultation documents, as it will be in the DCO documentation.</p> <p>The Project has also undertaken modelling using the Project's transport model varying the Project charge to help understand potential impacts on the Blackwall and Silvertown tunnels.</p> <p>The Project has provided Transport for London with a cordon of its transport model, the most recent being in April 2022, to enable them to undertake detailed analysis.</p> <p>Growth within the transport model is capped in line with DfT traffic forecasts (Trip End Model Presentational Program (TEMPro 7.2) and adjusted locally to account for developments close to the Project that are under construction, have a planning application and planning</p>	<p>Transport Assessment [Application Document APP-529] Wider Network Impacts Management and Monitoring Plan [Application Document APP-545]</p>	Matter Under Discussion

Topic	Item No.	Transport for London Comment	National Highways' Response	Application Document Reference	Status
		<p>reassurance on these specific impacts.</p> <p>However, Transport for London remains concerned about the impacts of the Project should growth in housing, employment and therefore traffic be higher than forecast, and considers that more detailed sensitivity tests to understand this are required.</p>	<p>permission (as of 30 September 2021). Low and high growth scenarios have also been undertaken and reported within the Transport Forecasting Package (Appendix C of the Combined Modelling and Appraisal Report (ComMA)).</p>		
<p>Local modelling requests</p> <p>Sensitivity test for Gallows Corner</p>	2.1.26	<p>Given the extended timescales for delivery of the Project, and in the absence of a funded scheme for the replacement of the Gallows Corner flyover, which will need to close by 2026 at the latest, Transport for London requested that the Project modelling includes a sensitivity test to take into account that the flyover may not be operational at the time of the crossing opening.</p> <p>While Transport for London has concerns about the strategic modelling for the Project within London, the sensitivity test for Gallows Corner has provided sufficient reassurance to resolve Transport for London's concerns about the impact on this junction.</p>	<p>The Applicant has undertaken this sensitivity test to specifically consider the effects with the flyover removed, and the results were shared with Transport for London.</p>	N/A	Matter Agreed
Wider Network Impacts					

Topic	Item No.	Transport for London Comment	National Highways' Response	Application Document Reference	Status
<p>Local Wider Network Impacts concerns</p> <p>Understanding wider network impacts on local and strategic roads</p>	<p>2.1.27 RRE</p>	<p>Transport for London has a major interest in changes in travel patterns on the TLRN and local road network, and the wider network impacts that arise as a result of the opening of the LTC in isolation or cumulatively with other projects. Subject to a full analysis, Transport for London notes potential locations of concern:</p> <ul style="list-style-type: none"> • M25 junction 29 • M25 junction 28 • Gallows Corner junction between the A12 and A127 • A127 west of M25 junction 29 • Junctions of the A127 between M25 junction 29 and Gallows Corner including that with Squirrels Heath Road and Ardleigh Green Road • A13 west of M25 junction 30. <p>Transport for London is of the view that, 'micro-simulation modelling' might be required to ensure in-depth analysis of the impact at these locations.</p> <p>Transport for London would like to understand potential issues including safety concerns, impacts on bus journey times and pedestrian and</p>	<p>The Applicant has undertaken this modelling to support understanding of the forecast impacts of the Lower Thames Crossing on the road network as set out in the application. As is customary for a scheme such as the Project, which will have impacts over a sizeable area, the forecast demand modelling has been undertaken using a strategic transport model. The outputs from the transport model are used to inform the appraisal of Project impacts and to support the decision-making process.</p> <p>These local junction models were developed to support the interrogation of the LTAM results rather than to develop detailed plans for each junction. The transport modelling to support such an exercise would involve building a calibrated base year model from freshly collected data of current observations for each junction. The Applicant does not consider it appropriate to develop such local junction models to the level proposed by Transport for London.</p> <p>The Applicant also notes that this was an exploratory modelling exercise rather than the predictive modelling typically supplied by developers. Predictive modelling would be undertaken if any Project designs are brought forward for consideration at any of these junctions in the future. As a consequence, while discussion of these findings will continue, in particular to focus on the potential inclusion of specific locations into the monitoring proposals set out</p>	<p>Wider Network Impacts Management and Monitoring Plan [Application Document APP-545]</p>	<p>Matter Under Discussion</p>

Topic	Item No.	Transport for London Comment	National Highways' Response	Application Document Reference	Status
		<p>cycle flows, as well as other operational complexities.</p> <p>Transport for London has significant concerns about the robustness of the local junction assessments undertaken by National Highways. No validation of base year flows was undertaken which draws into question the validity of any of the outputs. Transport for London has jointly commissioned surveys and the preparation of validated junction models to enable a more robust assessment of the impacts of the Project on these junctions to be undertaken. The results of this assessment will be available shortly.</p>	<p>within the Wider Network Impacts Management and Monitoring Plan, it is not proposed to develop these local junction models further through validation or further refinement.</p>		
<p>Wider Network Impacts approach Mitigation of wider network impacts</p>	<p>2.1.28 RRE</p>	<p>Where monitoring demonstrates that, as a result of the traffic impacts of the Project, mitigation is required to the road network in London, Transport for London requires National Highways to commit to delivering this mitigation through its own funding as part of the Project mitigation.</p> <p>National Highways should consider, at this stage, the range of mitigation options, with potential interventions not limited to capacity upgrades. Options for reducing highway traffic flows need to be considered;</p>	<p>At a meeting on 29 July 2022, the Applicant explained its approach to wider network concerns from local authorities before and after the crossing opens. It was explained that the Applicant has assessed the wider network impacts of the Project and has considered these against the requirements set out in the National Policy Statement for National Networks (DfT, 2014), and considers that the adverse transport impacts are acceptable under this policy. Further information on policy compliance can be found within the Transport Assessment. As such, the Applicant is not committing to any direct additional funding for</p>	<p>Wider Network Impacts Management and Monitoring Plan [Application Document APP-545] Draft DCO [Additional</p>	<p>Matter Not Agreed</p>

Topic	Item No.	Transport for London Comment	National Highways' Response	Application Document Reference	Status
		<p>including, but not limited to, varying the charges of the Lower Thames Crossing (and Dartford Crossing). In response to National Highway's comments, Transport for London strongly disagrees that it is possible to state that no impacts will require mitigation given the shortcomings of the modelling relied upon within London, which means that junction delays are not robustly forecast (see item number 2.1.32 above). Transport for London notes that the National Highways modelling team have openly acknowledged this shortcoming. Further, the fact that monitoring is proposed suggests that National Highways anticipates impacts will arise. Without a means of mitigating those impacts, the Project will not achieve its full objectives and could have a long-term detrimental impact on the highway network and local environment.</p> <p>Transport for London also disagrees with the proposed timing and period of monitoring because monitoring from only one year before opening will overlap with construction activity.</p> <p>Transport for London further queries how not committing to mitigate any</p>	<p>interventions on the wider network through the DCO.</p> <p>The Project is proposing to monitor the impacts of the Project on traffic on the local and strategic road networks. If the monitoring identifies issues or opportunities related to the road network as a result of traffic growth or new third-party developments, then local authorities would be able to use this as evidence to support scheme development and case making through existing funding mechanisms and processes.</p> <p>An updated Wider Network Impacts Management and Monitoring Plan (WNIMMP) will be included in the application, providing information about the proposed traffic monitoring. The Applicant will also provide a briefing on the changes made to the WNIMMP since a draft version was shared in the July 2021 Community Impacts Consultation.</p> <p>The traffic impact monitoring scheme will be secured in Schedule 2 of the draft Development Consent Order and would require approval by the Secretary of State, after consultation with relevant local highway authorities, which would begin one year before the tunnel area opens.</p> <p>The Applicant does not consider that there is a need for an additional framework to support the joint working between the Applicant and affected highway authorities on the future optimisation of the road network following the opening of the A122 Lower Thames Crossing.</p>	<p>Submission AS-038 Transport Assessment [Application Document APP-529] Transport Assessment - Appendix F - Wider Network Impacts Management and Monitoring Policy Compliance [APP-535]</p>	

Topic	Item No.	Transport for London Comment	National Highways' Response	Application Document Reference	Status
		<p>impacts of the LTC scheme on the wider network beyond the core scope of the scheme is consistent with National Highways' licence from the DfT and the need to co-operate with other highway authorities to secure the smooth running of the wider network not only day-to-day but for the long term.</p> <p>TfL considers that there are potential approaches to joint working between the Applicant and affected highway authorities on mitigation that monitoring shows to be necessary, building on approaches adopted for other nationally significant infrastructure projects such as the Silvertown Tunnel.</p>	<p>The licence under which the Applicant operates (Highways England: Licence, DfT, 2015) requires that the Applicant works with local highway authorities and others to align national and local plans and investments, balance national and local needs and support better end to end journeys for road users. The Applicant will continue to deliver against this obligation in its collaborative work with local authorities and Transport for London.</p> <p>The approach the Applicant takes to working with relevant authorities is set out in the publication <i>The strategic road network - Planning for the future - A guide to working with Highways England on planning matters</i> (National Highways, 2015).</p> <p>An approach to joint working that was required solely for the consideration of changes in traffic flow that are solely associated with the operation of the A122 Lower Thames Crossing would not provide the strategic overview of changes across the wider road network. Over time, further developments will be brought forward in the region, local plans will evolve and economic changes will occur (such as fuel price changes). As a consequence, there is a level of uncertainty over what, if any, interventions to enhance the operation of the road network might be beneficial. The Applicant, in its capacity as a strategic highway authority, produces Route Strategies which take a strategic approach across England,</p>		

Topic	Item No.	Transport for London Comment	National Highways' Response	Application Document Reference	Status
			<p>and these involve engagement with a wide range of stakeholders, including local authorities.</p> <p>Over time, it will be very difficult to demonstrate that traffic flow changes on the road network were solely as result of the Lower Thames Crossing and not other factors such as wider demand for travel, nearby new development, or changes in the way the road network was managed. As such National Highways considers it appropriate that the existing framework for managing the road network, as set out in 7.9 Transport Assessment Appendix F Wider Network Impacts Management and Monitoring Policy Compliance, supported by the existing obligations placed on the Applicant by the licence, remain the appropriate way to make decisions about future investment priorities.</p>		
<p>Monitoring approach</p> <p>Scope of monitoring</p>	2.1.29	<p>Transport for London requires the section of the A127 west of M25 junction 29 to be included within the scope of the Wider Network Impacts Management and Monitoring Plan.</p>	<p>The Applicant has engaged with Transport for London regarding how it has considered comments made during and since the 2021 Community Impacts Consultation and updates to the WNIMMP. However, in accordance with Section 5.3 of the WNIMMP, the Applicant will engage with relevant local highway authorities including Transport for London when drawing up the final set of locations to be monitored.</p> <p>The section of the A127 requested has been included in the WNIMMP and this matter is now agreed.</p>	<p>Wider Network Impacts Management and Monitoring Plan (WNIMMP) [Application Document APP-545]</p>	<p>Matter Agreed</p>

Topic	Item No.	Transport for London Comment	National Highways' Response	Application Document Reference	Status
Climate					
Legislative and policy frameworks Construction and operational carbon emissions	2.1.30 RRE	<p>Transport for London is committed to reducing carbon emissions from road transport with the overall aim of becoming a zero-carbon city by 2050, as set out in the Mayor’s Transport Strategy. In addition, in the Mayor’s manifesto for the 2021 election, he has accelerated the ambition, to achieve net zero by 2030. Transport for London welcomes the discussion with National Highways on its emerging approach to reducing carbon and notes that National Highways has made commitments to achieve net zero carbon emissions in its 2021 document “Net zero highways: our 2030 / 2040 / 2050 plan”. It is essential that the updated Environmental Statement refers to this plan and clearly sets out how the Project will play its part in driving down carbon emissions.</p> <p>Transport for London disagrees that the Carbon and Energy Management Plan [Application Document APP-552] is aligned with the National Highways ‘Net Zero Highways’ plan as user carbon has been scoped out of the Carbon and Energy Management Plan but it is within the scope of the Net</p>	<p>The Applicant notes Transport for London’s position. The document Net Zero Highways: Our 2030 / 2040 / 2050 Plan is referred to in ES Chapter 15: Climate. Through its ‘Lowest Carbon Strategy’ presented in the Carbon and Energy Management Plan, the Project aims to align with the targets and trajectories set out in the Net Zero Highways Plan.</p> <p>The Project has adopted the avoid and/or prevent, reduce and remediate hierarchy for greenhouse gas (GHG) emissions. This has been applied throughout the design process and has informed the assumptions used to develop the ‘Do Something’ scenario and the Project’s carbon model.</p> <p>The measures that the Project has committed to implement in order to reduce and remediate GHG emissions are presented in Section 15.5 of ES Chapter 15: Climate. These include measures which are embedded in the engineering design, good practice measures and essential mitigation relevant to GHG emissions.</p> <p>As stated in Table B.1 of 7.19 Carbon and Energy Management Plan, the Applicant can influence but not control the emissions from road users (i.e., user traffic). Policies to deliver a reduction in operational emissions related to road users are being pursued at a strategic level by the Department for Transport. This includes a range</p>	<p>ES Chapter 15: Climate [Application Document APP-153] Carbon and Energy Management Plan [Application Document APP-552]</p>	Matter Not Agreed

Topic	Item No.	Transport for London Comment	National Highways' Response	Application Document Reference	Status
		Zero Highways plan. The management plan therefore omits what is likely to be the greatest carbon contribution of the Project and misses the opportunity to undertake a thorough investigation into whether and how the Project will reduce all related carbon. Chapter 15 of the Environmental Statement (APP-153) acknowledges that there will be an increase in carbon emissions as a result of the Project. Transport for London is therefore of the view that the approach to the carbon impacts of the Project does not fit with London and UK carbon policy, including the strategic priorities of the Government's Transport Decarbonisation Plan and consideration is needed of whether any additional mitigation is required.	of non-planning policies which will help to reduce carbon emissions over the transport network, as a whole, over time (including policies to decarbonise vehicles and radically reduce vehicle emissions). Interventions, for example those published in " <i>Decarbonising transport: a better, greener Britain</i> " (available at https://www.gov.uk/government/publications/transport-decarbonisation-plan) must be applied consistently to be successful and therefore fall outside what could reasonably be delivered by any individual scheme. Notwithstanding this, National Highways has also set out the actions which it is taking to support the Department for Transport across its Strategic Road Network in their " <i>Net Zero Highways: Our 2030 / 2040 / 2050 plan</i> ", available at https://nationalhighways.co.uk/netzerohighways/ . The Applicant acknowledges TfL's additional comment and will consider a response for inclusion in a subsequent version of this SoCG.		
Nitrogen deposition					
General methodology/ modelling/ alternatives/ Nitrogen deposition	2.1.31	The additional assessment on the impacts of nitrogen deposition, and associated compensatory areas, is welcomed by Transport for London, who note that there are no areas which are deemed to be significantly affected in the proximity of the TLRN.	The assessment regarding nitrogen deposition has been updated following the revised traffic modelling becoming available and is included in ES Chapter 5: Air Quality and specifically ES Appendix 5.6: Project Air Quality Action Plan. This covers the sites identified as being significantly impacted as well as the steps taken to review options for mitigation and compensation and the	ES Chapter 5: Air Quality [Application Document APP-143] ES Appendix 5.6 : Project Air	Matter Agreed

		<p>Transport for London is satisfied with the approach to assessment and mitigation of nitrogen deposition and therefore has no further issues.</p>	<p>rationale for how the compensation strategy was developed and the Project's final proposals. Information on the assessment for the designated sites that are affected is presented in ES Appendix 8.14 Designated Sites Air Quality Assessment.</p>	<p>Quality Action Plan [Application Document APP-350] ES Appendix 8.14: Designated Sites Air Quality Assessment [Application Documents APP-403 to APP-406]</p>	

Appendix A Engagement activity

Table A.1 Engagement activities between the Applicant and Transport for London since the DCO Application was submitted on 31 October 2022

Date	Overview of Engagement Activities
11 November 2022	Emailed Transport for London to offer DCO briefing session
14 November 2022	Emailed Transport for London to notify of publication of documents on Planning Inspectorate website
28 November 2022	Emailed Transport for London to inform that the DCO application was accepted for Examination
29 November 2022	Transport for London regular catchup meeting
02 December 2022	Emailed Transport for London to with pre-examination strategy, timetable and matters under discussion
13 December 2022	Transport for London regular catchup meeting
14 December 2022	Emailed Transport for London to inform of Planning Inspectorate announcement of the Relevant Representations and Interested Party Registration opening date
04 January 2023	Emailed Transport for London to advise of PADS Tracker request from Planning Inspectorate
09 January 2023	Emailed Transport for London to advise on Relevant Representations opening and further PADS Tracker guidance from Planning Inspectorate
10 January 2023	Transport for London regular catchup
12 January 2023	Emailed Transport for London to advise on Relevant Representations closing date and further PADS Tracker guidance from Planning Inspectorate
17 January 2023	A127 footbridge structural/ambitions meeting (joint with London Borough of Havering)
24 January 2023	Transport for London regular catchup meeting
21 February 2023	Transport for London regular catchup meeting
1 March 2023	DCO, planning and land and property SoCG matters resolution meeting
7 March 2023	Transport for London regular catchup meeting
17 March 2023	Environment SoCG matters resolution meeting
20 March 2023	Meeting about land status around A127 west WCH bridge
21 March 2023	Transport for London regular catchup meeting
4 April 2023	Transport for London regular catchup meeting
18 April 2023	Transport for London regular catchup meeting
24 April 2023	Emailed Transport for London to advise of Minor Refinement Consultation launch date
2 May 2023	Transport for London regular catchup meeting

Date	Overview of Engagement Activities
16 May 2023	Transport for London regular catchup meeting
30 May 2023	Transport for London regular catchup meeting
13 June 2023	Transport for London regular catchup meeting
16 June 2023	Charging regime meeting
27 June 2023	Transport for London regular catchup meeting
11 July 2023	Transport for London regular catchup meeting

Appendix B Glossary

Term	Abbreviation	Explanation
A122 Lower Thames Crossing	Project	A proposed new crossing of the Thames Estuary linking the county of Kent with the county of Essex, at or east of the existing Dartford Crossing.
Air quality	AQ	A measure of the level of various atmospheric pollutants.
Archaeological Mitigation Strategy – Outline Written Scheme of Investigation	AMS-OWSI	n/a
Adequacy of Consultation	AoC	n/a
Biodiversity Net Gain	BNG	Ecological enhancements introduced by the Project which leave the natural environment and the number of species present in it, in a measurably better state than before construction.
Community Engagement Plan	CEP	A detailed programme of community engagement for specific stakeholder groups, including schools, identifying proposed methods and likely timing of consultation activities during the construction period.
Community Impacts and Public Health Advisory Group	CIPHAG	An advisory group established by National Highways to feed local knowledge and understanding into the relevant technical assessments.
Department for Communities and Local Government	CLG	The former name of the Ministry of Housing, Communities and Local Government, now the Department for Levelling Up, Housing and Communities.
Code of Construction Practice	CoCP	Contains control measures and standards to be implemented by the Project, including those to avoid or reduce environmental effects.
Combined Modelling and Appraisal Report	ComMA	The purpose of the Combined Modelling and Appraisal Report is to inform decision makers and stakeholders on how the evidence underpinning the business case has been developed, from the initial identification of the underlying problem through the collection of data and the production of any supporting traffic models and forecast impacts of the Project on traffic to the eventual economic appraisal.
Dartford Crossing		Road crossing of the River Thames in England, carrying the A282 road between Dartford in Kent to the south with Thurrock in Essex to the north. It consists of two bored tunnels and the cable-stayed Queen Elizabeth II Bridge.
Department of Transport	DfT	The government department responsible for the English transport network and a limited number of

Term	Abbreviation	Explanation
		transport matters in Scotland, Wales and Northern Ireland that have not been devolved.
Design Manual for Roads and Bridges	DMRB	A comprehensive manual which contains requirements, advice and other published documents relating to works on motorway and all-purpose trunk roads for which one of the Overseeing Organisations (National Highways, Transport Scotland, the Welsh Government or the Department for Regional Development (Northern Ireland)) is the highway authority. For the A122 Lower Thames Crossing, the Overseeing Organisation is National Highways.
Development Consent Order	DCO	Means of obtaining permission for developments categorised as Nationally Significant Infrastructure Projects (NSIP) under the Planning Act 2008.
Development Consent Order application	DCO application	The Project Application Documents, collectively known as the 'DCO application'.
Electric Vehicle	EV	Electric vehicles are those that are either partially or fully electrically powered.
Environment Agency	EA	A non-departmental public body of Defra, established under the Environment Act 1995. It is the leading public body for protecting and improving the environment in England and Wales. The organisation is responsible for wide-ranging matters, including the management of all forms of flood risk, water resources, water quality, waste regulation, pollution control, inland fisheries, recreation, conservation and navigation of inland waterways.
Environmental Impact Assessment	EIA	A process by which information about environmental effects of a proposed development is collected, assessed and used to inform decision making. For certain projects, EIA is a statutory requirement, reported in an Environmental Statement.
Environmental Management Plan	EMP	For the Project, a plan setting out the conclusions and actions needed to manage environmental effects as defined by the Design Manual for Roads and Bridges standard LA 120. The CoCP is the equivalent of the first iteration of the EMP (EMP1). The contractor's EMP would be EMP2 and the end of construction EMP would be EMP3.
Environmental Management System	EMS	n/a
Environmental Statement	ES	A document produced to support an application for development consent that is subject to Environmental Impact Assessment (EIA), which sets out the likely impacts on the environment arising from the proposed development.

Term	Abbreviation	Explanation
Framework Construction Travel Plan	FCTP	A document which sets out a framework to reduce the impact of the Project's construction workforce on the road network as a result of travel to and from construction areas and compounds (including utility logistic hubs). The FCTP sets out proposed ways in which this would be done, including by reducing single occupancy vehicle trips and encouraging sustainable and active travel.
Flood Risk Assessment	FRA	An assessment of the risk of flooding from all flooding mechanisms, the identification of flood mitigation measures, and identification of actions to be taken before and during a flood.
Footpath	FP	A footpath is a type of thoroughfare that is intended for use only by pedestrians and excluding other forms of traffic such as motorised vehicles, bicycles and horses. Footpaths can be found in a wide variety of places, from city-centres to farmland, to mountain ranges.
Frequency	n/a	Sound consists of vibrations transmitted to the ear as rapid variations in air pressure. The more rapid the variations in air pressure, the higher the frequency of the sound. Frequency is defined as the number of pressure fluctuations per second and is expressed in Hertz (Hz).
Greater London Authority	GLA	The Greater London Authority (GLA), colloquially known by the metonym "City Hall", is the devolved regional governance body of Greater London. It consists of two political branches: the executive Mayorality (currently led by Sadiq Khan) and the 25-member London Assembly, which serves as a means of checks and balances on the former. Since May 2016, both branches have been under the control of the London Labour Party. The authority was established in 2000, following a local referendum, and derives most of its powers from the Greater London Authority Act 1999 and the Greater London Authority Act 2007.
Good practice	n/a	In the context of the Project, standard approaches and actions commonly used to avoid or reduce environmental impacts of infrastructure development. These are typically applicable across the whole Project.
Greenspace information for Greater London	GiGL	GiGL is a Community Interest Company that acts as the official custodian of environmental records for London boroughs and the City of London.
Greater London Archaeological Advisory Service	GLAAS	Part of Historic England's London Local Office, providing advice for the whole of Greater London, with the exception of the City of London and the

Term	Abbreviation	Explanation
		London Borough of Southwark who have their own archaeological planning advisers.
Ground investigation	GI	Several levels of investigation from desk-based research to onsite sampling to evaluate challenges related to soil/ground.
Heavy Goods Vehicle	HGV	A large, heavy motor vehicle used for transporting cargo.
Heritage asset	n/a	A building, monument, site, place, area or landscape identified as having a degree of significance meriting consideration in planning decisions because of its heritage interest. Heritage assets include designated heritage assets and assets identified by the local planning authority (including local listing).
Highways Agency	HA	Precursor to Highways England. No longer exists but still mentioned in reference to previous projects or in older documents.
Highways England	HE	Former name of National Highways.
Historic England	n/a	The public body that looks after England's historic environment. An executive non-departmental public body of the UK Government sponsored by the Department for Digital, Culture, Media and Sport, and the Government's advisor on heritage.
Joint Operations Forum	JOF	The JOF is an executive level forum made up of National Highways and its Contractors. National Highways will establish and chair a JOF, attended by senior representatives from the Contractors.
Landfill	n/a	A site for the disposal of waste materials.
Local plan	n/a	A Local Plan sets out local planning policies and identifies how land is used, determining what will be built where. Adopted Local Plans provide the framework for local development across England.
London Highway Assignment Model	LoHAM	A strategic model representing routeing and congestion of motorised highway trips using London's highway network.
Local planning authority	LPA	A local planning authority is the local authority or council that is empowered by law to exercise statutory town planning functions for a particular area of the UK. May also be referred to as 'local authority'.
Local Residents' Discount Scheme	LRDS	Accounts that offer discounts on road user charges but are subject to location-based eligibility criteria.
Local Road Network	LRN	The Local Road Network is that portion of the Road Network for which local government is responsible and is eligible for funding from the state government to operate and maintain.
Lower Thames Area Model	LTAM	Transport model designed to forecast impacts of providing additional road-based capacity across the

Term	Abbreviation	Explanation
		River Thames at locations at or east of the existing Dartford Crossing.
M25 junction 29	n/a	Improvement works to M25 junction 29 and to the M25 north of junction 29. The M25 through junction 29 will be widened from three lanes to four in both directions with hard shoulders.
M25 Motorway	M25	Orbital motorway that encircles most of Greater London.
Materials Management Plan	MMP	n/a
National Cycle Network	NCN	A series of traffic-free paths and quiet, on-road cycling and walking routes that connect to every major town and city.
National Grid Electricity Transmission	NGET	A UK company that builds and maintains the electricity transmission network in England and Wales.
Nitrogen dioxide	NO ₂	A reactive gas introduced into the environment by natural causes, including entry from the stratosphere, bacterial respiration, volcanos, and lightning. It is also introduced by the emissions of internal combustion engines burning fossil fuels.
National Policy Statement	NPS	There are 12 designated National Policy Statements (NPSs), setting out government policy on different types of national infrastructure development, including energy, transport, water and waste. NPSs provide the framework within which Examining Authorities make their recommendations to the Secretary of State.
National Policy Statement for National Networks	NPSNN	The NPSNN sets out the need for, and Government's policies to deliver, development of Nationally Significant Infrastructure Projects on the national road and rail networks in England. It provides planning guidance for promoters of Nationally Significant Infrastructure Projects on the road and rail networks, and the basis for the examination by the Examining Authority and decisions by the Secretary of State.
New Roads and Street Works Act 1991	NRSWA	n/a
Nationally Significant Infrastructure Project	NSIP	Major infrastructure developments in England and Wales, such as proposals for power plants, large renewable energy projects, new airports and airport extensions, major road projects, etc. that require a development consent under the Planning Act 2008.
Non-hazardous waste	n/a	Any waste not defined as 'hazardous' under the Hazardous Waste Directive (91/689/EEC).

Term	Abbreviation	Explanation
Non-motorised user(s)	NMU	Users of non-motorised vehicles (e.g. cyclists, horse riders) and pedestrians
Outline Landscape and Ecology Management Plan	oLEMP	A document which outlines the proposed management of the landscape and ecological elements of the Project.
Outline Materials Handling Plan	oMHP	A document which sets out the approach and high-level principles for handling construction materials and waste on the Project, both inside and outside the Order Limits.
Outline Site Waste Management Plan	oSWMP	The outline Site Waste Management Plan (oSWMP) sets out the overarching principles and procedures that would be applied for the management of waste during the construction phase of the Project.
Outline Traffic Management Plan for Construction	oTMPfC	The outline Traffic Management Plan for Construction has been produced to provide an outline framework and principles that will be applied for the design and management of construction traffic management and transport logistics for the Project.
Open space	n/a	Open space is defined in section 19 of the Acquisition of Land Act 1981 as 'any land laid out as a public garden, or used for the purposes of public recreation, or land being a disused burial ground'.
Overhead line	OHL	An electrical conductor, suspended on towers or poles, used for transmission and distribution of electrical energy. It consists of one or more conductors (commonly multiples of three).
Passenger Car Unit(s)	PCU	A metric to allow different vehicle types within a traffic model to be assessed in a consistent manner.
Planning Inspectorate		An executive agency of the Department for Levelling Up, Housing and Communities. The Planning Inspectorate deals with planning appeals, national infrastructure planning applications, examinations of local plans and other planning-related and specialist casework in England and Wales.
Project Manager	PM	The person with lead responsibility for a project or a workstream within a project.
Public Right of Way	PRoW	A right possessed by the public to pass along a route over land at all times. Although the land may be owned by a private individual, the public may still gain access across that land along a specific route. The mode of transport allowed differs according to the type of Public Right of Way, which can consist of footpaths, bridleways and open and restricted byways.
Register of Environmental Actions and Commitments	REAC	The REAC identifies the environmental commitments that would be implemented during the construction and operational phases of the Project if the

Term	Abbreviation	Explanation
		Development Consent Order is granted, and forms part of the Code of Construction Practice.
Road Investment Strategy	RIS	The Government's long-term strategy to improve England's motorways and major A roads. The first RIS (known as RIS 1) was published in 2015 and covers the period 2015-2020. A second RIS (RIS 2) was published in 2020 and covers the 2020-2025 period.
Site of Importance for Nature Conservation	SINC	Locally designated nature site protected through the planning system.
Secretary of State	SoS	The Secretary of State has overall responsibility for the policies of the Department for Transport.
Site Specific Travel Plans	SSTPs	Site Specific Travel Plans will be developed by contractors in respect of the sites which they are responsible (either an individual construction area or compound, or a number of construction areas and compounds where these are closely located with similar levels of accessibility), following the latest policy advice and best practice documents.
Site Waste Management Plan	SWMP	A document which sets out how resources will be managed, and waste controlled during the Project. Plans usually involve recording the amount of waste that will be produced and details the proposed methods of waste disposal.
Skills, Education and Employment (SEE) Strategy	SEE Strategy	The Skills, Education and Employment Strategy introduces how National Highways aim to provide long-term benefits to communities close to the Project through new jobs and work, higher skills and education. It also begins explains how National Highways will set the standard for construction in a low carbon world. This document will be revised every two years throughout the delivery of the project to remain current and responsive to local and national needs.
Small and Medium Sized Enterprise	SME	The UK definition of SME is generally a small or medium-sized enterprise with fewer than 250 employees. The EU also defines an SME as a business with fewer than 250 employees, a turnover of less than €50 million, or a balance sheet total of less than €43 million.
Social Impact Assessment	SIA	n/a
Social Value Framework	SVF	The Project's Social Value framework is reflective of local needs and priorities and sets out the wider opportunities that are realised through the way the crossing is designed and built. It also aligns with the Government's Social Value Model, published December 2020.

Term	Abbreviation	Explanation
Statement of Common Ground	SoCG	A Statement of Common Ground is a written statement containing factual information about the proposal which is the subject of the appeal that the appellant reasonably considers will not be disputed by the local planning authority.
Strategic Outline Business Case	SOBC	First stage of drawing together evidence pertaining to a transport scheme, focusing on the strategy or reasons why change may be required.
Strategic road network	SRN	The core road network in England managed by National Highways.
Supplementary Planning Guidance	SPG	Documents which provide supplementary information in respect of the policies in current or emerging Local Plans or national policy.
Sustainable Drainage System	SuDS	A drainage system designed to reduce the potential impact of new and existing developments with respect to surface water drainage discharges.
Sustainable Travel: Active, Responsible, Safe	STARS	Transport for London's accreditation scheme for London schools and nurseries. STARS inspires young Londoners to travel to school sustainably, actively, responsibly and safely by championing walking, scooting and cycling.
Sustainable Transport Working Group	STWG	A stakeholder group set up by National Highways to develop and deliver improvements to integrated sustainable transport infrastructure, including maximising use of the River Thames and improving connectivity and accessibility for walkers, cyclists and horse-riders.
National Planning Policy Framework	NPPF	The National Planning Policy Framework sets out the government's planning policies for England and how these are expected to be applied.
The Third Road Investment Strategy	RIS3	RIS3 sets out the government's aims and proposals for investment in the strategic road network from 2025 to 2030.
Thames Chase Community Forest	TCCF	An area of forest open to the public on the Essex/London border, maintained and improved for the benefit of wildlife and residents.
Trip End Model Presentation Program	TEMPro 7.2	The version of the DfT traffic forecasts used to cap growth within LTAM.
Transport for London	TfL	The integrated body responsible for London's transport system.
Tilbury Link Road	TLR	An option considered, following PRA in developing the preliminary design for Statutory Consultation.
Tonnes of carbon dioxide equivalent	tCO ₂ e	A metric relating to emissions of carbon dioxide and the resultant climate change impact adopted by the UN.

Term	Abbreviation	Explanation
Traffic Management Forum	TMF	The TMF would review planned traffic management arrangements and receive comments as to their appropriateness. The TMF would also monitor, review, and provide updates to the TMPs when required.
Traffic Management Plan	TMP	The approach to carrying out temporary traffic management for the safe construction of the Project. It will also explain management measures available to the Contractor to reduce the impact on the local community (including journey time reliability, access, and safety).
Transport Analysis Guidance	TAG	National guidance document produced by the Department for Transport.
Travel Plan Liaison Group	TPLG	A group set up by National Highway to administer the Framework Construction Travel Plan.
Transport Assessment	TA	A document that sets out assessments of the transport implications of development, and Transport Statements are a 'lighter-touch' evaluation to be used where this would be more proportionate to the potential impact of the development (i.e. in the case of developments with anticipated limited transport impacts).
Tunnel boring machine	TBM	Machine used to excavate tunnels with a circular cross-section.
UK Power Networks	UKPN	An energy network operator. Owns and maintains the electricity cables in South East England, the East of England and London.
United Kingdom Accreditation Service	UKAS	The United Kingdom Accreditation Service is the sole national accreditation body recognised by the British government to assess the competence of organisations that provide certification, testing, inspection and calibration services
Utilities Logistics Hub	ULH	The ULH receives, stores and distributes the plant machinery and materials for specific utility works.
Walkers, cyclists and horse riders	WCH	Walkers, cyclists and horse riders.
Web-based Transport Appraisal Guidance	WebTAG	Former name given for the Department for Transport's web-based multi-modal guidance on appraising transport projects and proposals, now known as Transport Analysis Guidance (TAG).
Wider Network Impacts Management and Monitoring Plan	WNIMMP	A plan detailing the operational traffic impact monitoring to be implemented to comply with DCO requirements.
Workers Accommodation Report	WAR	The Workers Accommodation Report [Application Document APP-551] sets out the estimated number of workers at the peak construction phase of the Project who would require temporary

Term	Abbreviation	Explanation
		accommodation, what type of accommodation these workers are anticipated to seek and where, and a consideration of this demand in the context of supply and the operation of the accommodation market.
World Health Organization	WHO	The WHO is a specialised agency of the United Nations that is concerned with international public health.
Waste and Resources Action Programme	WRAP	A registered charity which works with businesses, individuals and communities to achieve a circular economy through helping them reduce waste, develop sustainable products and use resources in an efficient way.
Written Scheme of Investigation	WSI	Sets out the scope, guiding principles and methods for the planning and implementation of archaeological assessment.
