Therefore all baseline conditions were previously set to Moderate. Although classified as Semi-natural woodland under Phase 1 categories, the woodland is correctly attributed to Other Broadleaved woodland under UK HAb (Metric) classification. Condition has been re-assesed using Technical Note 2.0 Condition Table against habitat data available, Poor condition is appropriate due to: ES section 8.7.24: "8.7.24.Woodland units within the Proposed Scheme boundary comprise plantation or secondary woodland, however, are of enhanced value within the site context given the scarcity of woodland cover in Cambridgeshire and have therefore been identified as being of local value". However no notable species were recorded within the woodland and it was not assessed as requiring additional botanical surveys or investigation. Additionally the woodland areasare very small and is all of a similar age and structure and lacks fallen or standing dead wood

Therefore all baseline conditions were previously set to Moderate. Condition has been re-assesed using Technical Note 2.0 Condition Table against habitat data available, Moderate condition is appropriate due assesment using HSI parameters whihc factor in water quality, invertebrates, planting and fish presence etc (see ES Appendix 8.6 section 4.3.1: " the HSI assessment revealed two waterbodies in the 'good' category, two waterbodies in the 'below average' category and one waterbody in the 'poor' category". While some waterbodies are of Good Quality there is an almost equal number of below average and poor waterbodies, therefore the overarching Condition score has been set to Moderate
