

Submission ID: 7806

These are questions for the joint Councils:

Please could the ExA be appraised as to the following:

When were you aware that the Applicant had forecast a significant increase in traffic along Cowley Lane?

Have you been provided with any data on either surveys or traffic modelling ?

Have you addressed safety concerns in respect of all users of this lane including walkers, cyclists and horse riders?

Are you aware of what constitutes Cowley Lane ?

We're you consulted by NH on the suitability of an increase in vehicular use of the single lanes through Cowley?

Having stated in your oral submission that these single carriageway lanes are unsuitable for any increase in traffic
can you explain why it would not be preferable for a survey of the condition of the road to be undertaken now?

Bearing in mind that a large area in the centre of the village specifically including Cowley Lane is a Conservation
area , what steps are you taking specifically in the undertaking of your duty to protect and enhance this historic area?

The bridge over the River Churn is also specifically within the conservation area , has an engineering report been
undertaken to assess the structural integrity of this historic bridge and its ability to carry additional traffic?
