APPENDIX A SCREENING MATRIX (PART A) APPENDIX B SCREENING MATRIX (PART B) APPENDIX C SCREENING MATRIX (THE SCHEME)

1. INTRODUTION

1.1. OVERVIEW

- 1.1.1. Item 10 of the Examining Authority's (ExA) Hearings Action Points asked the Applicant to provide further detail on how they have arrived at the conclusions included in Table 15-4 of Chapter 15: Assessment of Combined Effects Part A of the ES [APP-060] and Table 16-9 of Chapter 16: Assessment of Cumulative Effects of the ES [APP-062], as discussed during Issue Specific Hearing 3 (ISH3) held on 22 April 2021. As detailed at item 8.4 of Table 1-2 in the Applicant's Written Summaries of Oral Submissions to Hearings [REP6-044], at Deadline 6 of the Examination the Applicant produced an initial overview of the methodology used to group individual receptors and determine the residual effects experienced by each receptor group, in Appendix E Combined Effects Technical Note [REP6-047]. In that note, it was explained that the full details of the screening of receptor groups for cross topic combined effects would be provided for all receptor groups and associated individual receptors for Deadline 7 of the Examination.
- 1.1.2. This Technical Note provides the screening of receptors to group individual receptors and determine the residual effects experienced by each receptor group identified in Table 15-4 of Chapter 15: Assessment of Combined Effects Part A of the ES [APP-060] and Chapter 15: Assessment of Combined Effects Part B of the ES [APP-061], and Table 16-9 in Chapter 16: Assessment of Cumulative Effects of the ES [APP-062].
- 1.1.3. The combined effects reported within Chapter 15: Assessment of Combined Effects Part A of the ES [APP-060] and Chapter 15: Assessment of Combined Effects Part B of the ES [APP-061], and Table 16-9 in Chapter 16: Assessment of Cumulative Effects of the ES [APP-062] has been reviewed and updated to account for the Change Request and the additional effects identified following the application of the updated DMRB guidance outlined in Appendix 4.5: DMRB Sensitivity Test [APP-197] and provided at Deadline 1 and Deadline 3 (refer to Section 1.5 of this Technical Note). This technical note therefore supersedes the assessment of combined effects presented in the ES as follows:
 - Table 15-4 of Chapter 15: Assessment of Combined Effects Part A [APP-060] is replaced with Table 2-1 and Table 2-2 of this technical note
 - Table 15-4 of Chapter 15: Assessment of Combined Effects Part B [APP-061] is replaced with Table 3-1 and 3-2 of this Technical Note
 - Table 16-9 of Chapter 16: Assessment of Cumulative Effects of the ES [APP-062] is replaced with Table 4-1 of this Technical Note.
- 1.1.4. The remainder of Chapter 15: Assessment of Combined Effects Part A [APP-060], Chapter 15: Assessment of Combined Effects Part B [APP-061] and Chapter 16: Assessment of Cumulative Effects of the ES [APP-062] remains valid and unchanged unless otherwise noted in Chapter 2, Chapter 3 and Chapter 4 of this Technical Note.

1.2 SCREENING MATRIX

1.2.1. Common sensitive receptors from Technical Chapters 5 to 13 for Part A and Part B of the Environmental Statement (ES) [APP-040 to APP-059] that are exposed to residual effects of 'minor' or above by one or more technical topics as a result of the Scheme were collated into a cross topic combined effects screening matrix. This matrix provides the residual effects identified for each individual receptor that make up the receptor groups identified in Table 15-4 of Chapter 15: Assessment of Combined Effects Part A [APP-060] and Chapter 15: Assessment of Combined Effects Part B [APP-061], and Table 16-9 in Chapter 16: Assessment of Cumulative Effects [APP-062]. For example, all individual residential receptors that are exposed to residual effects of 'minor' or above for more than one technical topic have been listed within the cross topic combined effects screening matrix under the common receptor group heading 'Residents'. The impacts and residual significance of effects have been listed out for each individual receptor. The combined effect of all the different residual effects on a single receptor have then been reported in the 'Potential Combined Effects' column. To ensure a robust assessment, the combined effects assessment is based on the worst-case effects reported for each relevant receptor within the technical chapters of the ES. The 'overall combined effect on common receptor group' column sets out the overall range of significance of combined effects for the receptors in the common receptor group as a reasonable worst case.

1.3 RECEPTOR GROUPS

1.3.1. The screening matrix has been used to provide more detail on how individual receptors have been grouped and the residual effects that the grouped receptors would experience. For example, residential receptors would be exposed to effects as a result of the Scheme, which results in the overall cross topic combined effect reported in Table 15-4 in Chapter 15: Assessment of Combined Effects Part A [APP-060] and Chapter 15: Assessment of Combined Effects Part B [APP-061], and Table 16-9 in Chapter 16: Assessment of Cumulative Effects [APP-062]. This has been collated into a screening of receptor groups for cross topic combined effects table for construction and operation for Part A and Part B, as well as a separate table for the screening of receptor groups for cross topic combined effects [APP-062]).

1.4. STRUCTURE OF THE TECHNICAL NOTE

- 1.3.2. This technical note is structured as follows:
 - Chapter 1: Introduction to this technical note providing an overview of the methodology for screening of cross topic combined effects, the scope of this technical note and the amendments to the application;
 - Chapter 2: Screening for Cross Topic Combined Effects Part A provides the full details of the screening of receptor groups for cross topic combined effects for Part A construction (Table 2-1) and operation (Table 2-2), the updated DMRB guidance and mitigation and monitoring;

- Chapter 3: Screening for Cross Topic Combined Effects Part B provides the full details of the screening of receptor groups for cross topic combined effects for Part B construction (Table 3-1) and operation (Table 3-2), the updated DMRB guidance and mitigation and monitoring;
- Chapter 4: Screening for Cross Topic Combined Effects The Scheme provides the full details of the cross topic combined effect interactions for the Scheme (Table 4-1 (as originally presented in Table 16-9, Chapter 16: Assessment of Cumulative Effects [APP-062]), the updated DMRB guidance and mitigation and monitoring.

1.5. UPDATES TO THE APPLICATION

- 1.3.3. Due to the postponement of the proposed Scheme opening from 2023 to 2024, with a consequential design year of 2039, a reassessment of the operational noise assessment and operational air quality assessment for an opening year of 2024 and a design year of 2039 was undertaken to validate the assessment presented in Chapter 16: Assessment of Cumulative Effects of the ES [APP-062]. These reassessments also followed the updated DMRB guidance and are presented in Noise Addendum [REP1-019 to 022], the Air Quality Assessment (Scheme Opening Year 2024) [REP3-012] and the Updated Biodiversity Air Quality DMRB Sensitivity Assessment [REP3-010].
- 1.3.4. In addition, three amendments to the application were proposed (Change Request) at Deadline 4 of the Examination. On 9 April 2021, the Examining Authority (ExA) confirmed it accepted the Change Request as part of the application. The DMRB sensitivity appraisal for the Change Requests are presented in Environmental Statement Addendum: Earthworks Amendments for Change Request [REP4-061], Environmental Statement Addendum: Stabilisation Works for Change Request [REP4-063] and Environmental Statement Addendum: Southern Access Works for Change Request [REP4-064].
- 1.3.5. The screening matrices presented in this Technical Note have been reviewed and updated to include all reported effects from the Scheme, including the additional effects from the application of the updated DMRB guidance (provided in Chapter 2, Chapter 3 and Chapter 4 of this Technical Note), the reassessments for operational noise and air quality assessments and the Change Request.

2. SCREENING FOR CROSS TOPIC COMBINED EFFECTS PART A

2.1. INTRODUCTION

- 1.3.6. Table 2-1 and Table 2-2 identify the common sensitive receptors from Part A Technical Chapters 5 to 13 [APP-040 to APP-056] that are exposed to residual effects with a significance of 'minor' or above and sensitive receptors that have the potential for cross topic combined effects. The significance of residual effect for each individual receptor has been reviewed to present the cross topic combined effects for each individual receptor. The overall combined effect for that receptor group is then provided.
- 1.3.7. The screening matrix for common sensitive receptors and residual effects during construction and operation of Part A is provided in Appendix A of this Technical Note.

2.2. ASSESSMENT METHODOLOGY

1.3.8. The assessment methodology and legislative and policy framework is in accordance with the methodology set out in **Chapter 15: Assessment of Combined Effects Part A** of the ES [**APP-060**].

2.3. UPDATED DMRB GUIDANCE

- 1.3.9. Some DMRB guidance documents were updated in 2019 and 2020 (and associated IANs replaced), by which time the EIA for the Scheme was largely complete. However, a sensitivity test was undertaken in April / May 2020 by the Applicant either to demonstrate that the assessments reported in the ES were already compliant with the updated guidance, or to identify any changes to the conclusions of the assessments as a result of the updated guidance (determined through further assessment). A sensitivity appraisal was undertaken for the Part A cross topic combined effects assessment.
- 1.3.10. As outlined in Section 15.8, paragraph 15.8.2 and 15.8.3 of Chapter 15: Assessment of Combined Effects Part A [APP-060], a number of environmental effects that arose from Part A increased in significance as a result of the application of the updated DMRB guidance (refer to Appendix 4.5: DMRB Sensitivity Test [APP-197]). Section 15.8, paragraph 15.8.2 and 15.8.3 of Chapter 15: Assessment of Combined Effects Part A [APP-060] considers whether the changes to these significant effects would change the outcome of the combined effects assessment.
- 1.3.11. As set out in Section 15.8, paragraph 15.8.2 of Chapter 15: Assessment of Combined Effects Part A [APP-060], with the application of the updated DMRB guidance, the permanent loss of North Gate House would increase from a moderate adverse effect to large adverse effect. This would increase the cross topic combined effect from Moderate Adverse to Large Adverse for North Gate House.
- 1.3.12. Following the reassessment of operational noise [REP1-019 to 022], the additional beneficial noise effects outlined in Section 15.8, paragraph 15.8.3 of Chapter 15:
 Assessment of Combined Effects Part A [APP-060], have been reviewed and the

screening matrix for Part A has been updated to include the changes in operational noise effects as a result of the application of the updated DMRB guidance. These additional effects have been included within the screening matrix in **Table 2-2**.

2.4. MITIGATION AND MONITORING

- 1.3.13. As outlined in Section 15.9 of Chapter 15: Assessment of Combined Effects Part A [APP-060], following the best practice and mitigation measures outlined in the Outline Construction Environmental Management Plan (CEMP) [REP6-025 and 026], no further combined significant residual effects have been identified above the level of significance of those residual effects reported in Part A Technical Chapters 5 to 13 [APP-040 to APP-056]. Therefore, no further mitigation or monitoring is required above that already presented in Part A Technical Chapter 5 to 13 [APP-040 to APP-056] and the Outline CEMP [REP6-025 and 026].
- 1.3.14. Appendix GEN.4 Justification for Significant Residual Effects WQ GEN.1.35 [REP1-036] provides a justification for the residual significant effects reported in Technical Chapter 5 to Chapter 17 [APP-040 to 062] of the ES and why no further mitigation is proposed to be implemented. As set out in Table 1 of Appendix GEN.4 Justification for Significant Residual Effects WQ GEN.1.35 [REP1-036], no further mitigation measures are feasible to reduce the residual significant, cross topic combined effects anticipated as a result of Part A. Therefore, significant effects would remain for combined effects.

Common receptor group	Relevant technical topic	Potential impact	Significance of residual effects	Potential combined effects	Overall combined effect on common receptor group
Residents Refer to Figure 7.6: Visual Effects Drawing Residential Properties Part A [APP-093] for receptor locations	Air Quality	Changes to air quality within 200 m of construction activities	Residents within 200m of Part A would experience no residual effects after mitigation (not significant)	There are no residual effects on residents from air quality and noise and vibration after the implementation of mitigation measures as outlined within Chapter 5: Air Quality Part A [APP-040] and	Overall, the combined effect of Part A would be no worse than
	A Noise and Vibration	Increased noise and vibration levels within 300 m of construction activities	Residents within 300m of Part A would experience no residual effects after mitigation (not significant)	Chapter 6: Noise and Vibration Part A [APP-042] . Some residents have the potential for combined effects from Population and Human Health effects and Landscape and Visual. The following residents have the potential to experience a combined effect no worse than slight adverse (not significant) from	moderate to large adverse (significant) significance on residents during construction.
	Landscape and Visual	Change to views	Residents at the following properties would experience temporary, direct short-term slight adverse (not significant) residual effects: Ardyne (R17) Bothy Lodge (R18) The Old Sawmill (R19) Felton Park (R20) St Mary's House (R21) B6345 The Nook (R24) B6345 The Nook (R24) B6345 The Boarding House (R25) B6345 The Boarding House (R26) Hemelspeth (R27) Shothaugh Farm (R30) Tithemans Cottage (R32) Bockenfield (R42) Bockenfield Manor (R43) Helm (R47) Causey Park Lodge (South) (R49) Causey Park (R51) Thornbank (R64) Earsdon Mill (R66) Earsdon Moor House (R69) South View (R74) Shield Green (R76) Middle Fenrother (R80) Fenrother (R81) Gamekeepers Cottage (R84) Hebron Hill (The Cottage) (R87) West View (R107)	effects on human health, private assets and changes to views: Ardyne (R17) Bothy Lodge (R18) The Old Sawmill (R19) Felton Park (R20) St Mary's House (R21) B6345 The Nook (R24) B6345 Riverside House (R25) B6345 The Boarding House (R26) Hemelspeth (R27) Shothaugh Farm (R30) Tithemans Cottage (R32) Bockenfield (R42) Bockenfield Manor (R43) Helm (R47) Causey Park Lodge (South) (R49) Causey Park (R51) Thornbank (R64) Earsdon Mill (R66) Earsdon Moor House (R69) South View (R74) Shield Green (R76) Middle Fenrother (R80) Fenrother (R81) Gamekeepers Cottage (R84) Hebron Hill (The Cottage) (R87) West View (R107) West View (R108)

			 Field View (R63) Thornbank (R64) New Houses Farm (R65) Earsdon Mill (R66) Tindale Hill (R68) Earsdon Moor Farm (R70) Stafford House (R93) High Highlaws Cottage (R94) High Highlaws (R95) Capri Lodge (R96) Warreners Barns (R97) Northgate Farm (R98) Warreners Cottages (R100) Warreners House (R101) West View (R107) West View (R108) West View (R109) Middle Rigg (R110) Residents at the following properties would experience temporary, direct short-term large adverse (significant) residual effects from the loss of private property: North Gate House (R99) 		
Areas of Amenity surrounding Part A	Air Quality	Changes to air quality within 200 m of construction activities	There would be no residual effects after mitigation	There are no residual effects on areas of amenity from air quality and noise and vibration after the implementation of mitigation measures as outlined within Chapter 5: Air Quality Part A [APP-040] and	Overall, the combined effect for Part A would be no worse than
Refer to Figure 7.2: Landscape Character Area Part A [APP-089] And Appendix 7.1: Landscape Effects Schedule Part A [APP-216] for receptor locations	Noise and Vibration		Chapter 6: Noise and Vibration Part A [APP-042]. Some areas of amenity have the potential to experience combined effects from changes to perceived journey amenity, human health, changes to landscape character and temporary removal of a heritage asset. This is dependent on the location and	moderate adverse (significant) significance.	
	Landscape and Visual	Changes to the perception of landscape character	 The following landscape character areas would experience temporary, direct short-term slight adverse (not significant) residual effects from changes to the perception of landscape character: Broad Lowland Valley – Northgate (35b) 	nature of the construction works and areas of amenity. As such, there is the potential for areas of amenity to experience a direct, temporary, short-term combined	

Common receptor group	Relevant technical topic	Potential impact	Significance of residual effects	Potential combined effects
			 Lowland Farm Ridges – Wingates Ridge (37a) Lowland Rolling Farmland – Longframlington (38a) Lowland Rolling Farmland – Hub of Recreational Activity (38b) Coalfield Farmland – Coastal Coalfields (39a) 	effect no worse than modera from changes to journey ame changes to landscape charac removal of a heritage asset.
			 Users at the following areas of amenity would experience temporary, direct short-term moderate adverse (significant) residual effects from changes to the perception of landscape character: Broad Lowland Valley – Coquet Valley (35a) (localised Large Adverse (significant) effects around the construction of the River Coquet Bridge). Lowland Rolling farmland – Longhorsley (38b) Coquet Valley (Alnwick Landscape Character SPD) (17) (localised Large Adverse (significant) effects around the construction of the River Coquet Bridge). 	
	Cultural Heritage	Temporary removal of a heritage asset (Grade II listed milestone) from existing location to new surroundings	The removal of the Grade II Listed Building Milepost (NHL 1153544) would result in a direct, short-term slight adverse (not significant) residual effect. This feature is located within the Lowland Rolling Farmland – Longhorsley (38b) landscape character area.	
	Geology and Soils	Impacts on water quality	There would be a temporary, short-term slight adverse (not significant) residual effects from pollution to controlled water bodies (River Coquet and Secondary A Aquifer) during construction.	
	Population and Human Health	Effects on journey amenity and human health	There would be a temporary, short-term slight adverse (not significant) residual effect on human health receptors including recreational facilities and users of PRoW during construction.	
			There would be a temporary, short-term slight adverse (not significant) residual effect on journey amenity from visual intrusion during construction.	
Road Users Refer to Appendix 7.2:	Landscape and Visual	Effects on views	 Road users at the following viewpoints would experience temporary, direct short-term slight adverse (not significant) residual effects: Users of the A1: Section 1 (VP-21, VP-19, VP-9) 	There are no residual effects driver stress after the implem measures as outlined within and Human Health Part A [

There is the potential for a combined effect of no worse than slight adverse (not significant) significance on watercourses including the River Coguet and River Coguet and Coguet Valley	A would be no worse than minor adverse (not significant) during operation.
			 The following ecological receptors would experience a slight adverse (not significant) effect from nitrogen deposition: Coquet River Felton Park LWS Wansbeck and Hartburn Woods LWS Cawledge Burn LWS 		
			 The following ecological receptors experience slight beneficial (not significant) residual effects from decrease in nitrogen deposition: Ulgham Meadows LWS 		
	Noise and Vibration		There would be no residual effects after mitigation		
	and Visual art (e. exp sur cor		There would be a slight adverse (not significant) effect on high and medium value retained arboricultural features including Duke's Bank Wood.		
			There would be a slight beneficial (not significant) effect on low and very low features as the replacement planting matures.		
	Biodiversity	Direct loss of habitats and/or pollution and habitat degradation	 The following ecological receptors experience slight adverse (not significant) residual effects after mitigation: Bats Aquatic invertebrates Fish River Coquet Watercourse (HPI) River Coquet and Coquet Valley Woodlands SSSI 		

Common receptor group	Relevant technical topic	Potential impact	Significance of residual effects	Potential combined effects	Overall combined effect on common receptor group
	Road Drainage and the Water Environment	Localised permanent changes to morphology from proposed scour protection	There would be localised geomorphological impacts to the River Coquet and River Coquet and Coquet Valley Woodlands SSSI from the proposed Southern Access Works [REP4-064] and Stabilisation works [REP4-063] of slight (not significant).		
Community Facilities Refer to Figure 12.2: Commercial Properties and Community Receptors Part A [APP-121] for receptor locations	Air Quality	Exposure to increased pollution (NO ₂ and PM ₁₀) from changes to traffic flow, mix and speed	There would be no residual effects after mitigation	from air quality after the implementation of mitigation measures as outlined within air quality reassessment [REP3-012]. A Some community facilities have the potential for combined effects from Noise and Vibration, Landscape and Visual and Population and Human Health effects. Tritlington Church of England Aided First School would experience a combined effect from changes to noise, views and access and journey amenity of no worse than moderate and major beneficial (significant) to neutral residual effects during operation. The combined effect is therefore no greater than the individual effect. Si www. mm and box (si si due to the term of term of the term of	Overall, the combined effect of Part A would be no worse
	Noise and Vibration	Both an experienced increase and reduction in noise across Part A	There would be no residual effects on community facilities (including Northumbria Woodland Burials) from changes to noise levels with the exception of Tritlington Church of England Aided First School which would experience permanent, long-term major and moderate decrease (significant) in noise levels during operation.		than minor adverse (not significant) for community facilities with the exception of Tritlington Church of England Aided First School which would experience a combined effect of no worse than moderate and major beneficial (significant) significance during operation.
	Landscape and Visual	Effects on views	There would be no residual effects on community facilities from effects on views with the exception of Tritlington Church of England Aided First School which would experience slight adverse (not significant) residual effects in Year 1 reducing to Neutral in Year 15.		
	and Human ameni	Effects on access, amenity and private property	 Users of the following community facilities experience slight adverse (not significant) residual effects after mitigation for access and amenity: Felton Park 		
			 Users of the following community facilities experience slight beneficial (not significant) residual effects after mitigation for access and amenity: Tritlington Church of England Aided First School Northumbria Woodland Burials 		

3. SCREENING FOR CROSS TOPIC COMBINED EFFECTS PART B

3.1. INTRODUCTION

- 1.3.15. **Table 3-1** and **Table 3-2** identify the common sensitive receptors from **Part B Technical Chapters 5** to **13** of the ES [**APP-040 to APP-057**] that are exposed to residual effects with a significance of 'minor' or above and sensitive receptors that have the potential for cross topic combined effects. The significance of residual effect for each individual receptor has been reviewed to present the potential combined effects for each individual receptor. The overall combined effect for that receptor group is then provided.
- 1.3.16. The screening matrix for common sensitive receptors and residual effects during construction and operation of Part B is provided in Appendix B of this Technical Note.

3.2. ASSESSMENT METHODOLOGY

1.3.17. The assessment methodology and legislative and policy framework is in accordance with the methodology set out in **Chapter 15: Assessment of Combined Effects Part B** of the ES [**APP-061**].

3.3. UPDATED DMRB GUIDANCE

- 1.3.18. Some DMRB guidance documents were updated in 2019 and 2020 (and associated IANs replaced), by which time the EIA for the Scheme was largely complete. However, a sensitivity test was undertaken in April / May 2020 by the Applicant either to demonstrate that the assessments reported in this ES are already compliant with the updated guidance, or to identify any changes to the conclusions of the assessments as a result of the updated guidance (determined through further assessment). A sensitivity appraisal was undertaken for the Part B cross topic combined effects assessment.
- 1.3.19. As outlined in Section 15.8, paragraphs 15.8.2 and 15.8.3 of Chapter 15: Assessment of Combined Effects Part B of the ES [APP-061], a number of environmental effects that arose from Part B increased in significance as a result of the application of the updated DMRB guidance (refer to Appendix 4.5: DMRB Sensitivity Test [APP-197]. Section 15.8, paragraph 15.8.2 and 15.8.3 of Chapter 15: Assessment of Combined Effects Part B of the ES [APP-061] considers whether the changes to these significant effects would change the outcome of the combined effects assessment.
- 1.3.20. As set out in Section 15.8, paragraph 15.8.2 of Chapter 15: Assessment of Combined Effects Part B [APP-061], with the application of the updated DMRB guidance, the effect on Grade 3b agricultural land would increase from a slight adverse effect to a moderate adverse effect.
- 1.3.21. As set out in Section 15.8, paragraph 15.8.3 of Chapter 15: Assessment of Combined Effects Part B of the ES [APP-061], an existing beneficial significant effect for noise would increase from moderate beneficial to major beneficial as a result of application of the updated DMRB guidance. Following the reassessment of operational noise [REP1-019 to

022], the screening matrix for Part B has been reviewed and updated to include the changes in operational noise effects as a result of the application of the updated DMRB guidance. These additional effects have been included within the screening matrix in **Table 3-2**.

3.4. MITIGATION AND MONITORING

- 1.3.22. As outlined in Section 15.9 of Chapter 15: Assessment of Combined Effects Part B [APP-061], following the best practice and mitigation measures outlined in the Outline Construction Environmental Management Plan (CEMP) [REP6-025 and 026], no further combined significant residual effects have been identified above the level of significance of those residual effects reported in Part B Technical Chapters 5 to 13 [APP-040 to APP-057]. Therefore, no further mitigation or monitoring is required above that already presented in Part B Technical Chapter 5 to 13 [APP-040 to APP-057] and the Outline CEMP [REP6-025 and 026].
- 1.3.23. Appendix GEN.4 Justification for Significant Residual Effects WQ GEN.1.35 [REP1-036] provides a justification for the residual significant effects reported in Technical Chapter 5 to Chapter 17 [APP-040 to 062] of the ES and why no further mitigation is proposed to be implemented. As set out in Table 1 of Appendix GEN.4 Justification for Significant Residual Effects WQ GEN.1.35 [REP1-036], no further mitigation measures are feasible to reduce the residual significant, cross topic combined effects anticipated as a result of Part B and significant effects would remain for combined effects.

Common receptor group	Relevant technical topic	Potential impact	Significance of residual effects	Potential combined effects
Residents Refer to Figure 7.2: Visual Receptors Plan Part B [APP-136]	Air Quality	Changes to air quality within 200 m of construction activities	Residents within 200m of Part B would experience no residual effects after mitigation	There are no residual effects from air quality and noise an the implementation of mitiga

Overall combined effect on common receptor group

Overall, Part B would have a combined, temporary residual effect of no worse than **large adverse** (significant) significance on residents during construction.

Common receptor group	Relevant technical topic	Potential impact	Significance of residual effects	Potential combined effects	Overall combined effect on common receptor group
	Population and Human Health	Effects on human health	During construction there would be works within the vicinity of residential properties which would experience temporary, short- term slight adverse (not significant) residual effects for human health. These residents with the potential for combined effects are as follows: Broom House (1) Loaning Head (2) Heckley House and Heckley Cottage (3) Heckley Fence (4) Heiferlaw Bank (5) Rock Lodge (6) Rock Nab (7) Holywell Cottage (8) Broxfield and Surrounding Properties (9) West Linkhall Farmhouse and surrounding properties (10) Rock Midstead Cottages and Farmhouse (11) Rock South Farm (12) Drythropple (13) Rock Moor House (14) West Lodge (15) Properties at East Linkhall (16) Properties at South Charlton (17) Properties at South Charlton (18) Brockley Hall Cottages and Brockley Hall (20) Silvermoor (22) Goldenmoor (23) Properties at Denwick (24)	The following residents have the potential to experience combined effects of no worse than large adverse (significant) from change to views, human health, private assets, community severance and reduced access to PRoW: • Heckley House and Heckley Cottage (3) • Heckley Fence (4) • Heiferlaw Bank (5) • Rock Lodge (6) • Rock Nab (7) • Holywell Cottage (8) • West Linkhall Farmhouse and surrounding properties (including Patterson Cottage) (10) • Drythropple (13) All residents have the potential for minor beneficial effects (not significant) from socio-economic benefits during construction of the Part B.	
		Effects on community severance and reduced access to PRoW	 Residents at the following properties would experience temporary, direct short-term slight to moderate adverse (significant) residual effects for community severance and reduced access to PRoW: Broom House (1) 		

Common receptor group	Relevant technical topic	Potential impact	Significance of residual effects	Potential combined effects	Overall combined effect on common receptor group
			 Loaning Head (2) Heckley House and Heckley Cottage (3) Heckley Fence (4) Heiferlaw Bank (5) Rock Lodge (6) Rock Nab (7) Holywell Cottage (8) Broxfield and Surrounding Properties (9) West Linkhall Farmhouse and surrounding properties (10) Rock Midstead Cottages and Farmhouse (11) Rock South Farm (12) Drythropple (13) Rock Moor House (14) West Lodge (15) Properties at East Linkhall (16) Properties at South Charlton (17) Properties at South Charlton (18) Brockley Hall Cottages and Brockley Hall (20) Silvermoor (22) Goldenmoor (23) Properties at Denwick (24) 		

Common receptor group	Relevant technical topic	Potential impact	Significance of residual effects	Potential combined effects
			 Residents at the following properties would experience temporary, direct short- term minor beneficial (not significant) residual effects for socio-economic: Broom House (1) Loaning Head (2) Heckley House and Heckley Cottage (3) Heckley House and Heckley Cottage (3) Heckley Fence (4) Heiferlaw Bank (5) Rock Lodge (6) Rock Nab (7) Holywell Cottage (8) Broxfield and Surrounding Properties (9) West Linkhall Farmhouse and surrounding properties (10) Rock Midstead Cottages and Farmhouse (11) Rock South Farm (12) Drythropple (13) Rock Moor House (14) West Lodge (15) Properties at East Linkhall (16) Properties at North Charlton (17) Properties at South Charlton (18) Brockley Hall Cottages and Brockley Hall (20) Silvermoor (22) Goldenmoor (23) Properties at Denwick (24) 	
		Change in access to the A1 and proximity to construction activities	 Residents at the following properties would experience temporary, direct short- term slight adverse (not significant) residual effects from change in access: Heckley Fence (4) Rock Nab (7) West Linkhall Farmhouse and surrounding properties (10) Rock South Farm (12) West Lodge (15) 	

ts	Overall combined effect on common receptor group

Common receptor group	Relevant technical topic	Potential impact	Significance of residual effects	Potential combined effects	Overall combined effect on common receptor group
			 Properties at East Linkhall (16) Properties at South Charlton (18) 		
		Loss of private property	Residents at the following properties would experience permanent, direct large adverse (not significant) residual effects for private assets and land use as these properties will be demolished during construction to facilitate the Scheme: Charlton Mires Farm East Cottage		
		Socio-Economic benefits during construction	The construction stage would see a beneficial, temporary effect on the local economy through enhancing local labour and supporting local business through expenditure from direct spend on materials for Part B. There may also be beneficial effects from any construction labour employed from outside the region who would need to use local hotels and/or restaurants. Therefore, there is likely to be a direct, temporary effect on local (Northumberland) receptors including local residents of minor beneficial significance (not significant).		
Road Users Refer to Figure 7.2: Visual Receptors Plan Part B [APP-136] and Figure 12: Assessment Area	Landscape and Visual	Effects on views	There would be no residual effects on road users from change in views with the exception of Users of the A1 which would experience temporary, short-term moderate adverse (significant) residual effects during construction.	There are no residual effects from change in views on road users with the exception of users of the A1. As such, users of the A1 have the potential to experience combined effects from change to views and increased	Overall, Part B would have a combined temporary effect of no worse than moderate adverse (significant) significance

Common receptor group	Relevant technical topic	Potential impact	Significance of residual effects	Potential combined effects	Overall combined effect on common receptor group
for Driver Stress Part B [APP- 181] for receptor locations	Population and Human Health	Effects on road users from increased driver stress	Road users travelling on the following roads would experience temporary adverse effects (not significant) for driver stress: Users of the A1 (37)	driver stress of no worse than moderate adverse significance during construction.	on road users during construction
			 Users of the B6347 (38) Users of the B6341 (39) Users of the B1340 (40) Alnmouth Road between the A1, B1340, A1069 and Denwick The unnamed road to the east between the A1 at Charlton Mires to Rock Moor Farm 		
Users of PRoW (WCH) Air (Refer to Figure 7.2: Visual Receptors Plan Part B [APP-136]	Air Quality	Changes to air quality within 200 m of construction activities	WCH using PRoW within 200m of Part B would experience no residual effects after mitigation (not significant)	There are no residual effects on users of PRoW from air quality and noise and vibration after the implementation of	Overall, Part B would have a combined effect of no worse than large adverse (significant) significance on PRoW users during construction
for receptor locations	Noise and Vibration	Increased noise and vibration levels within 300 m of construction activities	WCH using PRoW within 300m of Part B would experience no residual effects after mitigation (not significant)	 mitigation measures as outlined within Chapter 5: Air Quality Part B [APP-041] and Chapter 6: Noise and Vibration Part B [APP-043]. Users of the following PRoW have the potential to experience a combined effect of no worse than moderate adverse (significant) from changes in views, effects on community severance, access, human health and journey amenity: PRoW 110/013 (33) PRoW 110/004 (34) 	
	Landscape and Visual		 WCH at the following PRoW would experience temporary, direct short-term slight adverse (significant) residual effects: PRoW 110/004 (34)

4. SCREENING FOR CROSS TOPIC COMBINED EFFECT INTERACTIONS THE SCHEME

4.1. INTRODUCTION

- 1.3.24. **Table 4-1** identifies the common sensitive receptors from **Technical Chapters 5** to **13** of the Scheme [**APP-040 to APP-057**] that are exposed to residual effects with a significance of 'minor' or above and sensitive receptors that have the potential for cross topic combined effects. The significance of residual effect for each individual receptor has been reviewed to present the cross topic combined effects for each individual receptor. The overall combined effect for that receptor group is then provided.
- 1.3.25. As outlined in Section 16.4, paragraph 16.4.44 and 16.4.45 of Chapter 16: Assessment of Cumulative Effects [APP-062], the cross topic combined effects assessment was undertaken individually for Part A (refer to Chapter 15: Assessment of Combined Effects Part A [APP-060] and Part B (refer to Chapter 15: Assessment of Combined Effects Part A [APP-061]), therefore the cross topic combined effects assessment considered within Chapter 16: Assessment of Cumulative Effects [APP-062] considered only sensitive receptors that are common between Part A and Part B (i.e. sensitive receptors that would be affected by both Part A and Part B when considered together).
- 1.3.26. This identified common sensitive receptors as residents within the vicinity of the Main Compound only due to the shared use of the compound for Part A and Part B and construction traffic traveling between the Main Compound and Part B.
- 1.3.27. The screening matrix for residual effects on residents during construction of The Scheme is provided in Appendix C of this Technical Note.

4.2. ASSESSMENT METHODOLOGY

1.3.28. The assessment methodology and legislative and policy framework is in accordance with the methodology set out in **Chapter 16: Assessment of Cumulative Effects** of the ES [APP-062].

4.3. UPDATED DMRB GUIDANCE

- 1.3.29. Some DMRB guidance documents were updated in 2019 and 2020 (and associated IANs replaced), by which time the EIA for the Scheme was largely complete. However, a sensitivity test was undertaken in April / May 2020 by the Applicant either to demonstrate that the assessments reported in this Environmental Statement (ES) are already compliant with the updated guidance, or to identify any changes to the conclusions of the assessments as a result of the updated guidance (determined through further assessment). A sensitivity appraisal was undertaken for the Scheme cross topic combined effects assessment.
- 1.3.30. As outlined in **paragraph 16.8.66** of **Chapter 16: Assessment of Cumulative Effects** of the ES [**APP-062**], the updated DMRB guidance does not affect the assessment outcomes

for construction dust, construction noise, community severance and human health receptors. For visual amenity, the updated DMRB guidance assigns scattered residential receptors and small settlements a reduced sensitivity, meaning the assessment in **Table 4-1** presents a worst case scenario. The assessment on the economy and employment is not required under the updated DMRB. Although not required under DMRB, the assessment of economy and employment has been undertaken making reference to overall significance criteria. It is considered that the assessment of economy and employment is robust and with the application of the updated guidance the conclusions of the assessment would remain unchanged. Therefore, the assessment presented in **Table 4-1** would remain unchanged as a result of the updated DMRB guidance.

4.4. MITIGATION AND MONITORING

- 1.3.31. As outlined in Section 16.10 of Chapter 16: Assessment of Cumulative Effects [APP-062], no further likely combined significant residual effects have been identified above the level of significance of those reported for the Scheme alone. Therefore, no further mitigation or monitoring is required other than that set out in Part A Technical Chapters 5 to 13 [APP-040 to APP-056] and Part B Technical Chapters 5 to 13 [APP-040 to APP-056] and Outline CEMP [REP6-025 and 026].
- 1.3.32. Appendix GEN.4 Justification for Significant Residual Effects WQ GEN.1.35 [REP1-036] provides a justification for the residual significant effects reported in Technical Chapter 5 to Chapter 17 [APP-040 to 063] of the ES and why no further mitigation is proposed to be implemented. As set out in Table 3 of Appendix GEN.4 Justification for Significant Residual Effects WQ GEN.1.35 [REP1-036], no further mitigation measures are feasible to reduce the residual significant, cross topic combined effects anticipated as a result of the Scheme and significant effects would remain for cross topic combined effects.

Table 4-1 - Screening of Receptor Group for Cross Topic Combined Effects during Construction (The Scheme)

Common receptor group	Relevant technical topic	Potential impact	Significance of residual effects	Potential combined effects
			 Residents at the following properties would experience temporary, direct short-term moderate adverse (significant) residual effects: Thirston New House (R34) 	
	Landscape and Visual (Part B)	Changes to Views	Residents located within the vicinity of the Main Compound would experience no residual effects after mitigation for changes to views from construction of Part B.	
	Population and Human Health (Part A)	Effects on community severance, human health and socio-economic benefits	Residents at the following properties would experience temporary, direct short-term slight adverse (not significant) residual effects for community severance: B6345 (The Boarding House) (R26) Hemelspeth (R27) Glenshotton (R28) Cahone Cottage (R31) Tithemans Cottage (R32) Thirston New Houses (R33) Thirston New Houses (R33) Thirston New House (R34) Residents at the following properties would experience temporary, direct short-term slight adverse (not significant) residual effects for private property: B6345 (The Boarding House) (R26) Hemelspeth (R27)	
			 Glenshotton (R28) Cahone Cottage (R31) Tithemans Cottage (R32) Thirston New Houses (R33) Thirston New House (R34) 	

Overall combined effect on common receptor group

Common receptor group	Relevant technical topic	Potential impact	Significance of residual effects	Potential combined effects
			Residents at the following properties would experience temporary, direct short-term slight adverse (not significant) residual effects for human health: B6345 (The Boarding House) (R26) Hemelspeth (R27) Glenshotton (R28) Cahone Cottage (R31) Tithemans Cottage (R32) Thirston New Houses (R33) Thirston New Houses (R33) Thirston New House (R34) The construction stage would see a beneficial, temporary effect on the local economy through enhancing local labour and supporting local business through expenditure from direct spend on materials for Part A. There may also be beneficial effects from any construction labour employed from outside the region who would need to use local hotels and/or restaurants. Therefore, there is likely to be a direct, temporary effect on local (Northumberland) receptors including local residents of minor beneficial significance (not significant).	
	Population and Human Health (Part B)	Effects on community severance, human health and socio-economic:	Residents located within the vicinity of the Main Compound would experience negligible (not significant) residual effects for human health as a result of Part B using the Main Compound during construction. Residents located within the vicinity of the Main Compound would experience no residual effects after mitigation for community severance from construction of Part B.	
			The construction stage would see a beneficial, temporary effect on the local	

Overall combined effect on common receptor group
