

Submission ID: 13139

Sites 6/12 A & D - located north of existing Junction 21 Witham.

To look at the size and need of the borrow pit; the need for permanent land take vs temporary land take and how the land could be restored and the affect on farming neighbouring land.

Also the need for such a large site compound and the effects of using the concrete track from the field to the station.

The land can be viewed from public rights of way, but more extensive inspection would only be available on private land. This has been proposed due to the scale of land take and the effect of the land take on the farming activities of the owner and tenant.
