Subject: TRO 20002 Hazard from firefighting foam is also an airborne hazard
Date: 01 June 2019 09:23:24

Dear PINS

Riveroak have dodged cumulative impact and precautionary principle in the application phase

Now they have submitted a construction phase plan leaving out that firefighting foam chemical contaminants also create airborne hazard to population and construction workers.

I asked you to liaise with your local plan inspector colleague. There should in addition to the call for report on water supply quality be a call for report on air quality taking account of firefighting foam initial toxic load.

Kind regards Richard
