### 1 Introduction

- 1.1.1 This Statement of Common Ground (SoCG) has been prepared in support of the examination phase for the proposed Gatwick Northern Runway Project (NRP). The Application was made by Gatwick Airport Limited (the Applicant) to the Secretary of State for the Department for Transport (the Secretary of State) pursuant to Section 37 of the Planning Act 2008 (PA 2008).
- 1.1.2 The Application comprises alterations to the existing northern runway which, together with the lifting of the current restrictions on its use, would enable dual runway operations. It also includes the development of a range of infrastructure and facilities which, with the alterations to the northern runway, would enable an increase in the airport's passenger throughput capacity. This includes substantial upgrade works to certain surface access routes which lead to the airport. A full description of the Proposed Development is included in **ES Chapter 5: Project Description** (Doc Ref. 5.1).
- 1.1.3 SoCGs are an established means in the planning process of allowing all parties to identify and focus on specific issues that may need to be considered during the Examination. The purpose and possible content of SoCG is detailed in the Department for Communities and Local Government's guidance entitled 'Planning Act 2008: examination of applications for development consent' (2015), stating:

"A statement of common ground is a written statement prepared jointly by the applicant and another party or parties, setting out any matters on which they agree. As well as identifying matters which are not in real dispute, it is also useful if a statement identifies those areas where agreement has not been reached. The statement should include references to show where those matters are dealt with in the written representations or other documentary evidence."

- 1.1.4 The SoCGs between the Applicant and the local authorities comprises several documents, to which this document is one. The Statement of Commonality provides details of the structure and status of the SoCG between all the relevant Interested Parties, including the local authorities. Naturally, the level of detail across the suite of SoCG varies to reflect the nature and complexity of the matter, as well as the position between the parties.
- 1.1.5 This document solely relates to matters between the Applicant and Kent County Council. A summary of the meetings and correspondence that has taken place between the parties is detailed in **Appendix 1** of this document.
- 1.1.6 The engagement between the parties across the breadth of matters is ongoing. Therefore, the SoCG is an evolving document and the detailed wording within it is still being discussed in detail between the parties. Future iterations will be submitted at each deadline; and both parties reserve the right to supplement the matters identified as discussions progress, to ensure it is comprehensive and up to date.
- 1.1.7 This SoCG has been produced to confirm to the Examining Authority (ExA) where agreement has been reached between the parties, and where agreement has not (yet) been reached, and is presented in a tabular form. This SoCG does not seek to replicate information that is available elsewhere, either within the Application and/or Examination documents, referring out where

appropriate. The terminology used within the SoCG to reflect the status between the parties is either:

- "Agreed" to indicate where a matter has been resolved to the satisfaction of the parties.
- "Not Agreed" to indicate a final position where parties cannot agree.
- "Under discussion" to indicate where matters are subject of on-going discussion with the aim to either resolve or refine the extent of disagreement between the parties.
- 1.1.8 It can be assumed that any matters not specifically referred to in Section 2 of this SoCG are not of material interest or relevance to Kent County Council; and therefore, have not been the subject of any discussions between the parties or have been previously discussed and addressed through the DCO process. As such, those matters should be assumed to be agreed, unless otherwise raised in due course by any of the parties.

#### **Current Position** 2

#### 2.1. Agricultural Land Use and Recreation

2.1.1 Table 2.1 sets out the position of both parties in relation to agricultural land use and recreation matters.

| Assessment   |                             |   |   |
| 2.11.3.1     | Climate Change -            | The northern runway project would have a significant material impact on         | The Jet Zero strategy sets out a range of these potential rates of  |
|              | Emissions                   | the Government's ability to meet carbon reduction targets. By 2050,             | trend (on efficiency, SAF, and novel aircraft technologies) and thes  |
|              |                             | routinely operating the Northern Runway would see Gatwick being                 | rates (based on the High Ambition scenario forming the basis of UI  |
|              |                             | responsible for 20% of the overall UK aviation carbon budget. KCC is            | Government strategy and commitments) have been used to model  |
|              |                             | concerned that this expansion cannot be justified in the wider context of       | the future emissions from aircraft as set out in Section 3.1 of ES  |
|              |                             | the global requirement to reduce CO2 emissions.                                 | Appendix 16.9.4.  |
|              |                             | Updated position (Deadline 1): The Applicant's proposals refer to the           | It is not for the applicant or for the examination to assess risks on   |
|              |                             | Government's Jet Zero Strategy. However, the Climate Change                     | the basis that government policy will fail.   |
|              |                             | Committee (CCC) has several concerns around the Jet Zero Strategy and           |   |
|              |                             | states that the strategy carries considerable risks in relation to the aviation | It is apparent that government is committed to its net zero target  |
|              |                             | sectors' contribution to emission abatement to the Sixth Carbon Budget.         | and to closely monitoring aviation and other trajectories to ensure compliance.   |
|              |                             | Jet Zero's reliance on new technologies is high risk and the Applicant          |   |
|              |                             | should assess all risks that may occur, particularly in this current scenario   | Updated position (April 2024)   |
|              |                             | where the CCC raise real issues with the current strategy.                      | The Government responded directly to the 2022 recommendation i  |
|              |                             |   | its Government Response of March 2023. CCC Annual Progress  |
|              |                             | It is currently unclear within the Applicant's proposals how they are           | Report March 2023   |
|              |                             | complying with the Climate Change Committee's recommendations. As               | • "197. We remain committed to growth in the aviation sector  |
|              |                             | such, KCC remains concerned that this expansion cannot be justified in          | where it is justified. Our analysis in the Jet Zero Strategy  |
|              |                             | the wider context of the global requirement to reduce CO2 emissions.            | shows that the sector can achieve net zero carbon   |
|              |                             |   | emissions from aviation without the government needing to   |
|              |                             | Updated position (Deadline 5): Unchanged Negative Impact.                       | intervene directly to limit aviation growth. Our scenarios  |
|              |                             | Further clarification is required from the Applicant that the Jet Zero 'high    | show that we can achieve our targets by focusing on new fuels, technology, and carbon markets and removals with                                   |
|              |                             | ambition' scenario has been assessed and deemed viable by the Climate           | knock-on economic and social benefits. Our 'high ambition   |
|              |                             | Change Commission.  | scenario has residual emissions of 19 MtCO2e in 2050.   |
|              |                             |   | compared to 23 MtCO2e residual emissions in the CCC's   |
|              |                             | Further clarification is required that GAL's economic argument has              | Balanced Pathway.   |
|              |                             | incorporated the potential costs arising from climate risks if policy           | Datanood Fallmay.   |
|              |                             | frameworks fail. A weakening of the economic argument could undermine           | Airport growth has a key role to play in boosting our global  |

|          |           |  | our strict environmental criteria. We do not, therefore,<br>consider restrictions on airport growth to be a necessary   |                  |
|----------|-----------|--|---|------------------|
|          |           |  | measure."   |                  |
| 2.11.3.2 | Emissions | <ul> <li>KCC's concern previously outlined is maintained. It is currently unclear how the proposals are complying with the Climate Change Committee's recommendations as detailed further in KCC's written representation.</li> <li>Clarification must be provided by Gatwick Airport Limited as to whether the impact on society of extra emissions generated from the Project has been calculated. KCC also require further detail regarding how the proposals comply with the Climate Change Committee's recommendations.</li> <li>Updated position (Deadline 5): Unchanged Inconclusive Impact.</li> <li>As stated above, further clarification is required from the Applicant that the Jet Zero 'high ambition' scenario has been assessed and deemed viable by the Climate Change Commission.</li> </ul> | <ul> <li>The CCC was established under the Climate Change Act 2008 to provide an advisory role to Government on emissions targets and to report to Parliament on progress made in reducing greenhouse gas emissions in the context of those targets. The CCC recommends 5-year national Carbon Budgets to achieve the Government's target of net zero by 2050. The CCC publishes annual progress reports which contain recommendations to Government. Government publishes a formal response each year to the Progress Reports and recommendations. The Government's most recent response responded to the Progress Report 2022.</li> <li>The Government responded directly to the 2022 recommendation in its Government Response of March 2023, stating:         <ul> <li><i>"We remain committed to growth in the aviation sector where it is justified. Our analysis in the Jet Zero Strategy</i></li> </ul> </li> </ul> | Under discussion |
|          |           | Further clarification is required that the impact of extra emissions from the<br>Project on society has been considered. The cost of one tonne of carbon<br>on society, according to the Government's Green Book, ranges from £276<br>per tonne in 2029 to £378 per tonne in 2050. When calculating the extra<br>cost to society due to the emissions from this project (using the<br>Government's carbon values), the annual cost ranges from £185 million to<br>£343 million. From 2029 to 2050, the cumulative social impact cost of the<br>extra carbon emissions released from this project totals £5.93 billion.   | <ul> <li>shows that the sector can achieve net zero carbon emissions from aviation without the government needing to intervene directly to limit aviation growth. Our scenarios show that we can achieve our targets by focusing on new fuels, technology, and carbon markets and removals with knock-on economic and social benefits. Our 'high ambition' scenario has residual emissions of 19 MtCO2e in 2050, compared to 23 MtCO2e residual emissions in the CCC's Balanced Pathway.</li> <li>Airport growth has a key role to play in boosting our global connectivity and levelling up in the UK. Our existing policy frameworks for airport planning provide a robust and balanced framework for airports to grow sustainably within our strict environmental criteria. We do not, therefore, consider restrictions on airport growth to be a necessary measure."</li> </ul>   |                  |
|          |           |  | <ul> <li>Furthermore, the UK Government in October 2023 responded to the CCC confirming its position that:</li> <li>"We will monitor progress against our emissions reduction trajectory on an annual basis from 2025, with a major review of the Strategy and delivery plan every five years. The first major review will be in 2027, five years after publication of the Strategy in 2022.</li> <li>The Jet Zero Strategy sets out details on how the aviation sector can achieve net zero without government intervening</li> </ul>  |                  |

|                |                                  |   | <ul> <li>directly to limit aviation growth. DfT analysis shows that in all modelled scenarios we can achieve our net zero targets by focusing on new fuels and technology, rather than capping demand, with knock-on economic and social benefits.</li> <li>If we find that the sector is not meeting the emissions reductions trajectory, we will consider what further measures may be needed to ensure that the sector maximises in-sector reductions to meet the UK's overall 2050 net zero target."</li> </ul> |  |                  |
|----------------|----------------------------------|---|---|--|------------------|
| 2.11.3.3       | Aviation Emissions               | <ul> <li>KCC are concerned about the proposed aviation emissions associated with this proposal. KCC seeks clarification from the Applicant on how they propose to align with the Paris Agreement given the large volume of extra emissions from this Project and the unrealistic prospect of sequestering these. Furthermore, it would be helpful to understand if the impact of the Northern Runway proposals on the Sixth Carbon Budget has been calculated.</li> <li>Updated position (Deadline 5): Unchanged Inconclusive Impact.</li> <li>KCC notes the impact of the Project, with regard to Greenhouse Gases, as set out in Table 16.9.13 of DCO document 5.1 Environmental Statement Chapter 16: Greenhouse Gases [REP4-005]. We note the significant loading factor caused by the inclusion of emissions from international aviation which have been included – for the first time - within the Sixth Carbon Budget period. The omission of international aviation data in earlier budget periods does not equate with an absence of realworld emissions from this source. What impact would the inclusion of international data in earlier Budgets have on GAL's analysis?</li> </ul> | The assessment has considered the impact of aviation emissions<br>within the context of the UK carbon budgets. The extent to which<br>these relate to requirements under the Paris Agreement will be<br>provided at Deadline 4.<br>The impact of the Project, with regard to Greenhouse Gases, is set<br>out in Table 16.9.13 of Chapter 16 within the Environmental<br>Statement.  | ES Chapter 16<br>Greenhouse Gases<br>[APP-041] | Under discussion |

|             |                                    |  | ES Appendix 14.9.2 Air Noise Modelling [APP-172] gives the                     | [APP-065]            |              |
|             |                                    | The Applicant's discussion on overflights is lacking any kind of information   | methodology used in the overflight modelling. Paragraph notes:                 |                      |              |
|             |                                    | on how communities would be affected by the proposed expansion. Figure         |  | ES Landscape,        |              |
|             |                                    | 14.9.31 [APP-065] shows analysis where areas would experience                  | The largest effect of the Project in terms of increasing flight                | Townscape and        |              |
|             |                                    | overflights from both the Main and Northern Runway in 2032. Compared to        | numbers in the busy summer period is forecast to be in 2032                    | Visual Resources     |              |
|             |                                    | Figure 14.6.7 [APP-063], which illustrates the 2019 Baseline overflight        | when there would be increases of approximately 10% at night and                | Figures – Part 2     |              |
|             |                                    | levels, it is clear that areas within west Kent would experience a worsening   | 19% in the day compared to the 2032 baseline. As a conservative                | [REP2-007]           |              |
|             |                                    | of overflight and be negatively impacted. This is particularly the case where  | approximation the 24 hour flight numbers were increased by 20%.                |                      |              |
|             |                                    | aircraft turn over areas such as Tunbridge Wells.                              |  |                      |              |
|             |                                    |  | Given that there is no change in the routing of aircraft in the                |                      |              |
|             |                                    | However, GAL's submission does not contain any detailed information            | Tunbridge Wells area, these are the expected increases in the                  |                      |              |
|             |                                    | about aircraft noise at Tunbridge Wells as it is outside any of the contours   | number of overflights.   |                      |              |
|             |                                    | that have been produced. The maps produced by the Applicant to show            |  |                      |              |
|             |                                    | 'overflights' from 2019 (Figure 14.6.7 to 14.6.8 of APP-063) and 2032          | In addition to the noise contours provided in the ES, the Applicant            |                      |              |
|             |                                    | (Figure 14.9.31 of APP-065) are of such coarse resolution that it is hard to   | has published the noise modelling results on an online air noise               |                      |              |
|             |                                    | draw any meaningful information from them. Additionally, the figure from       | viewer as referred to in paragraph 14.9.80 of the ES. Using this               |                      |              |
|             |                                    | 2032 does not just cover Gatwick Airport but covers all aircraft activity      | viewer it can be seen that in areas to the West of Tunbridge Wells             |                      |              |
|             |                                    |  | Leq 16 hour noise levels will be below 51 dB and Leq hour night                |                      |              |

# G LONDON GATWICK

below 7,000 feet around Gatwick, which dilutes the impact from the increased movements as a result of the proposed expansion.

Furthermore, apart from the landscape assessment locations identified, no further details on the number of overflights are provided. Therefore, it is not possible to determine the extent to which the number of overflights are anticipated to increase within the set categories. For example, an area might currently experience 101 overflights a day but with the Northern Runway in place this would increase to 199, the location would be represented the same on the two maps, but communities on the ground would experience an additional 98 overflights per day.

The Applicant is requested to update the overflights assessment so meaningful information can be obtained regarding how communities would be affected by increased aircraft movements.

It must also be noted that the proposals focus mainly on aircraft departing the airport, but little information is provided regarding aircraft arriving at Gatwick. The Applicant makes clear their proposals are for departing aircraft only to utilise the Northern Runway, however little consideration has been given to the fact the Project could create extra capacity on the existing main runway and allow GAL the opportunity to increase the number of larger aircraft arriving and departing from the main runway.

**Updated Position (Deadline 3):** KCC's previous position is maintained. Further clarification is required from the Applicant as to whether the increase at Hever Castle includes any additional arrivals that may use the main runway when the Northern Runway is being routinely used for departures. Furthermore, consideration needs to be given to the impact this project will have on the tranquillity of National Landscapes and how the Applicant will "seek to further the purposes" of the National Landscape.

**Updated Position (Deadline 5)**: KCC notes the Applicant's acknowledgement that the Northern Runway Project would result in an increase in arrivals, however clarification has not been provided regarding the ratio of the number of arrivals and departures with the project in place.

Furthermore, The Applicant has not made it possible to draw a direct comparison between 2019 Baseline Gatwick Overflights and 2032 Gatwick Overflights with the Northern Runway. The only overflight mapping provided for 2032 is a combination of all airports and this masks the extent to which the northern runway proposals contribute to the number of overflights. noise levels will be below 45 dB. The number of noise events on an average summer day above LMax 65dB will be less than 20 and number of events at night above LMax 60 dB will be less tha 10, so the noise effects of the Project will not be significant.

A tranquillity study has been undertaken within ES Chapter 8: Landscape, Townscape and Visual Resources [APP-033] in accordance with an appropriate methodology (to accommodate specific criteria in CAA CAP1616 Appendix B, para B30 and B56 Frequency of aircraft movements and general orientation of flight are illustrated using heat maps in ES Landscape, Townscape and Visual Resources Figures – Part 2 [REP2-007] Figures 8.6.3 to 8.6.7 together with nationally designated landscapes. Th assessment is based on the increase in overflying aircraft up to 7000 ft above local ground level as a result of the Project, compared to the future baseline scenario in 2032 (See Table 8.9) for summary of representative assessment locations and overflig numbers including Knole Park). It is considered that the increase in overflights will be barely perceptible to some people and imperceptible to others. The magnitude of change is considered range from No Change to Negligible and the level of effect would range from No Change to Minor adverse. Whilst an adverse effect on the perception of tranquillity has been identified it is not considered to constitute significant harm to this perceptual quality

# G LONDON GATWICK

what constitutes "reasonable financial support". KCC ask the Applicant to provide further information on what they deem "reasonable financial support" and to work with KCC to develop the proposals for coach services to and from Kent to ensure they are successful.

We request a sensitivity test on public transport mode share forecasts. We request a model sensitivity test on the implications of a continuation of the flat public transport mode share of "around 45%" for air passengers prior to the pandemic, which Diagram 6.2.4 of the Transport Assessment [AS-079] indicates has been fairly consistent since 2012. KCC would appreciate receiving model results in the form of shape files for such an assessment, including traffic speeds and volume / capacity ratios, so we can better appreciate the effects on the road network.

**Updated Position (Deadline 5):** KCC's previous concerns are maintained, although as stated in our Deadline 4 Submission [REP4-055], we have revised our position on the planning and provision of coach services to <u>neutral</u> following the Applicant's confirmation on page 256 of document 10.15 Applicant's Response to the Local Impact Reports [REP3-078] that the final routings for the coach services to be supported under the Surface Access Commitments [REP3-028] will be subject to engagement with "operators and with local authorities, including in respect of final service pattern, route and calling points". KCC also notes that on page 8 of control document Surface Access Commitments [REP3-028] Commitment 5 states the Applicant "recognises that agreement with operators and/or local authorities will be needed on the detail of each route".

Our position on the issue of kerb space provision has now been downgraded to negative following the Applicant's confirmation that "Detailed assessment of the forecourt performance using the VISSIM models has not been undertaken as part of the DCO assessment" on page 255 of document 10.15 Applicant's Response to the Local Impact Reports [REP3-078]. The Applicant's 55% public transport mode share targets assume a nearly three-fold increase in total air passenger coach services between 2016 and 2047 with Project, supported by a fifteen-fold increase in air passenger coach services for Kent. KCC is concerned that the significant dwell times associated with coaches catering to air passengers (boarding & alighting with luggage) will limit the capacity of the finite kerb space available, in turn causing congestion on airport service roads, which may affect all roadside access. The Applicant's response notes the availability of "a coach park close to South Terminal", but this appears to involve a walk of over 200m, unprotected from the weather - including the crossing of a busy access road.

confidence in the forecasting process, assumptions and outputs. an example, through discussions with National Highways, a test which explored a 10% increase in airport traffic was undertaken to understand the sensitivity of the model in terms of performance of the network, particularly at M23 Junction 9, and the resilience of t proposed highway works to traffic flows greater than those foreca through the core modelling process.

The Applicant has also undertaken sensitivity testing for post-Cov travel behaviour, following guidance issued by the DfT in an updated version of TAG Unit M4. These sensitivity tests for the strategic model are reported in Accounting for Covid-19 in Transport Modelling [AS-121]. Post-Covid sensitivity tests have a been undertaken using the VISSIM model, to address requests from National Highways, which are reported in Post-Covid VISSIM Sensitivity Tests for 2032 and 2047 [REP3-108] submitted at Deadline 3.

KCC acknowledges that the Applicant has undertaken some forms of sensitivity testing – but not those that address KCC concerns over the ambitious fifteen-fold increase in air passenger coach services for Kent that support the 55% public transport mode share target of the Surface Access Commitments [REP3-028]. In our Deadline 4 Submission [REP4-055], we reiterate our request for the "first sensitivity test" – on the implications of a continuation of the flat public transport mode share of around 45% for air passengers prior to the pandemic, which Diagram 6.2.4 of the updated Transport Assessment [REP3-058] indicates has been fairly consistent since 2012. This test represents an "adverse case" for travel between Kent and Gatwick by car; for which we would like to understand the implications on the highway network and particularly M25 Junction 7 (M23), where the merges & diverges of the relevant turning movements are modelled at or around capacity in the Core Scenario. KCC acknowledges the Applicant's referral to the Section 106 (S106) agreement [REP2-004] with regard to the provision of "reasonable financial support" to new coach services to Gatwick. However, neither KCC nor the coach operators will be signatory to the S106 and must therefore rely on the wording of the Surface Access Commitments (SAC) [REP3-028] which is a control document. We appreciate the efforts of National Highways towards strengthening the text of the SAC and have the following additional comments: • KCC would prefer to see the Commitment 5 text of paragraphs (1) and (2) state that the Applicant will engage with "operators and local authorities" rather than "and/or". KCC public transport team would like to be made aware of all Kent-Gatwick coach planning initiatives, so they can consider and advise on any wider strategic impacts and hopefully contribute positively to the route planning process. • KCC would prefer to see the text of Commitment 5 paragraph (2) state that the Applicant "must use best endeavours" rather than "reasonable endeavours", as KCC has had problems with the latter in past planning agreements and feels the former puts more onus on the developer to deliver. KCC does not feel that S106 Section 5, Investment in Bus and Coach Services, currently contains enough information for us to conclude the Applicant is providing "reasonable financial support". We are not aware that the stated minimum £10m budget (covering a nine-year Monitoring Period) has been agreed in consultation with local authorities and coach operators who are not signatories to the S106. At this stage, KCC would like to see a high-level assessment of the costs required for the Kent services and how (combined with other proposed services) these can be provided within that stated budget.

| 2.20.4.2 | Surface Access - Rail | Improving transport connections to Gatwick from Kent has not been   | A comprehensive assessment of the rail network has been   |
|----------|-----------------------|---|---|
|          | Connections           | sufficiently addressed, particularly to bring forward initiatives to serve<br>passengers & staff accessing the airport from areas in Kent by rail. There<br>is a need for Gatwick Airport Limited (GAL) to actively support the need to<br>extend the rail service to Canterbury West via Redhill, Tonbridge, and<br>Ashford, with a possible link to the existing service between Gatwick &<br>Reading. This would help widen the economic benefits of the airport to<br>Kent.   | undertaken in Chapter 9 of the Transport Assessment. The full se<br>of rail data is included in ES Appendix 12.9.2 Rail Passenger<br>Flows. The assessment for the Project shows that there is no<br>significant adverse impact on rail services which requires mitigation<br>GAL will continue to work with Network Rail and Train Operators<br>potential future improvements. |
|          |                       | <b>Updated position (Deadline 1):</b> KCC acknowledges the significant volume of services and their theoretical capacity on the rail network to support the forecast demand from the Project, as outlined in the Transport Assessment [AS-079].   | <b>Updated position (April 2024):</b> Please see above updated position row 2.20.4.1 on sensitivity tests.  |
|          |                       | However, KCC has concerns about potential pressure on the two London<br>transfer stations that support Kent trips to Gatwick, given there are no<br>direct rail services (although Network Rail has concluded that service<br>operations would be feasible via Redhill station).  |   |
|          |                       | In view of this, together with our concern over the ambitious fifteen-fold<br>increase in air passenger coach services for Kent to support the 55%<br>public transport mode share target, we anticipate the Northern Runway<br>Project will have a negative impact on current rail network capacity. A<br>request for a second model sensitivity test on public transport mode share<br>forecasts has been made in our Written Representation.  |   |
|          |                       | <b>Updated Position (Deadline 3):</b> KCC's previous request is maintained. A second model sensitivity test on public transport mode share forecasts is requested. The second model sensitivity test should maintain the public transport mode share for air passenger coaches at the same levels as those prior to the pandemic but covers the achievement of 55% public transport mode share by increases in rail patronage.  |   |
|          |                       | <b>Updated Position (Deadline 5):</b> KCC's previous concerns are maintained<br>and as stated in our Deadline 4 Submission [REP4-055], our position<br>remains <u>negative</u> on Surface Transport Impact C (Rail Network Capacity),<br>as published in our Local Impact Report [REP1-079] and Written<br>Representation [REP1-080]. We acknowledge that the Applicant has<br>undertaken some forms of sensitivity testing – but not those that address<br>KCC concerns over the ambitious fifteen-fold increase in air passenger<br>coach services for Kent that support the 55% public transport mode share<br>target of the Surface Access Commitments [REP3-028]. We therefore<br>reiterate our request for the "second sensitivity test" – that maintains the |   |
|          |                       | public transport mode share for air passenger coaches at the same levels<br>as those prior to the pandemic but covers the achievement of 55% public   |   |
