

With reference to DCO hearing TR020005. Please take into urgent consideration the following issues as they have NOT been addressed:

1. It is NOT POLICY. This is a new runway, so does not comply with 'Beyond the Horizons – Making Best Use of Existing Runways'.
2. There is no carbon cap which there should be. Scope 3 emissions must also be included.
3. Aircraft Noise – there must be, for the health of the residents, a 0.5 decibel reduction every year as proposed by PINS. There must also be a night ban.
4. Areas of outstanding natural beauty and of historic importance are not being considered
5. Air quality – air standards must be legally binding in the DCO.
6. Waste water flooding – The DCO must include a mandatory onsite wastewater sewerage treatment plant, to prevent local homes being flooded with sewerage due to lack of provision by Thames Water.
7. Significant increase in waste – there MUST be accountability in how much waste will be transported on our roads, and to where.
8. The Community Fund – focuses solely on media opportunity events and charities, so does not reflect the impact the airport currently has on communities.
9. Odours – there is a significant lack of detail on what odours will be generated by alternative fuels to meet decarbonising requirements.

Thank you
