

I do not support building of this new runway for the following reasons:

- 1) It is not needed
- 2) Does not meet carbon reduction targets which should be based on absolute measure reduction from today's position including scope 3 emissions
- 3) Does not comply with noise reduction targets, again should be an absolute measure of reduction from status today
- 4) Can not make sense to progress this application until the airspace modernisation is concluded. There should be more dispersal to regional airports rather than concentration of even more at Gatwick
- 5) There is no plan to improve air quality only a commitment to monitor, again should be mandatory target improvements based on the position now
- 6) It will have a detrimental impact on the local labour market, unemployment is already very low, so where are these new workers going to live/travel from?
- 7) Traffic is already horrendous around the area and there are insufficient public transport facilities to meet the demand from increased traffic that would be generated. All of this should be factored into the environmental considerations (carbon emissions, noise, air quality etc).
