

TR020005 Gatwick Airport Northern Runway Project

Interested Party Reference number: 20044448

Overview of Global Airlines

Global Airlines, officially launched in 2023, is headquartered in London, United Kingdom. The airline is led by CEO James Asquith and backed by aviation experts and investors around the world. The airline has commenced a fleet development programme with one A380 fully acquired and more to follow in 2025. The inaugural passenger flight will take place in 2025. Global Airlines is bold, with a vision to provide the *best way to fly*, inspired by the golden age of travel. Its core proposition is to deliver unparalleled customer experience across all cabins and services using the A380 aircraft, the favourite aircraft to fly by travellers.

Core Feedback:

1. Global Airlines shares the applicants' ambition to develop an additional Northern runway.
2. The airline is an on the record supporter of increasing airport capacity in the South-East and believes this to be an important pre-requisite for creating a more competitive marketplace that benefits passengers and meets future demand.
3. We support increased facilities at LGW to improve operators on-time performance, reduced delays and disruptions and increase overall customer satisfaction.
4. We recognise the additional runway would enhance much needed capacity and remove the risks associated with operating a single runway at such a busy, important and growing airport.
5. We support the move to make London and the South-East more accessible for tourism and trade.
6. We support the notion for growth in the Gatwick area bringing more jobs and resources.
7. Whilst we fully endorse the proposal for an additional runway at LGW, we also recognise the need to develop further infrastructure to support this increased capacity – namely new departure gates capable of supporting A380 movements.
8. Global Airlines would like to base future operations from LGW and therefore additional runway capacity is essential, along with the infrastructure required to support such an operation.
