

I do not support the building of a new runway. I support the 0.5 decibel reduction every year, as proposed by PINS. Night flights must be banned. A carbon cap is essential, Scope 3 emissions must be included. Insulation compensation for all affected residents. Air quality standards are rising, DCO must have stringent mandatory targets. Must have on site waste water/ sewerage treatment plant. Air space is not big enough modernisation should have been included in this application. construction workers will put strain on housing stock & roads.
