ANNEX 12

12.1 COMMERCIAL FISHERIES

- 12.1.1 Results of the fisheries assessment conducted at the proposed reclamation area are shown in *Table 10.1 Intertidal Assessment* and *Table 10.2 Subtidal Assessment*. The intertidal samples were collected with fyke (eel) nets with 15 mm mesh and a 6 m central net wall. The nets were deployed between Mean Sea Level and Mean High Water Neap over two consecutive tides resulting in approximately 7.5 hours of actual sampling time. The subtidal samples were collected with a 2 m beam trawl fitted with a 5 mm codend mesh.
- 12.1.2 The species are ranked in order of averaged abundance according to effort ($\text{fyke}^{-1} \text{ day}^{-1}$) or area (1000 m^2) for the intertidal and subtidal assessment, respectively. Coefficients of variation (CV %) are given.
