There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of Av. delay per arriving vehicle.

#### File summary

#### **File Description**

| Title       |            |
|-------------|------------|
| Location    |            |
| Site number |            |
| Date        | 02/08/2022 |
| Version     |            |
| Status      | (new file) |
| Identifier  |            |
| Client      |            |
| Jobnumber   |            |
| Enumerator  | DTA\arcady |
| Description |            |

#### Units

| Distance units | Speed units | Traffic units input | Traffic units results | Flow units | Av. delay units | Total delay units | Rate of delay units |
|----------------|-------------|---------------------|-----------------------|------------|-----------------|-------------------|---------------------|
| m              | kph         | PCU                 | PCU                   | perHour    | s               | -Min              | perMin              |

#### **Analysis Options**

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of Av. delay per arriving vehicle.

# **Annex L**

Technical Note 5 – Slip Road Assessments (Annex L)

### 1.0 Introduction

- 1.1 This Technical Note has been produced by DTA to summarise the results of the merge diverge assessments carried out as part of the Transport Assessment.
- Merge / diverge assessments on the A180/ A1173 Interchange and the A160/ A180 Interchange (Brocklesby Interchange) have been undertaken in accordance with the guidance within Design Manual for Roads and Bridges (DMRB) CD122 'Geometric design of grade separated junctions'. This considers the configuration of the slip road merge and diverge arrangements for a given combination of mainline and slip road flows against a number of different standard layouts.
- 1.3 For context, the development flows for the slip roads are provided at Figure 5 and Figure 7 of the TA. The numbers have been recreated in **Table 1** below. The mainline flows are at point within the junction downstream of the diverge and upstream of the merge. To put these flows into context the practical capacity of a single lane of an all-purpose road is taken (in CD122) as 1600 vehicles per hour and the equivalent single lane on a connector road as 1350 vehicles per hour.

Technical Note 5 – Slip Road Assessments (Annex L)

- 1.4 As can be seen above, the total number of vehicles in any one direction of movement are low. The only links were flows exceed 30 movements per hour are the A1173/ A180 west facing slips and the A180 mainline under the A160/ A180 interchange.
- 1.5 At present, all the slip roads at both junctions are Layout A with two lanes up and downstream on the mainline. The A180/ A1173 Stallingborough Interchange has two lanes on the connector road. The eastbound merge and westbound diverge on the A160/ A180 Interchange (Brocklesby Interchange) have one lane connector roads with the eastbound diverge and westbound merge having two lane connector roads.

Technical Note 5 – Slip Road Assessments (Annex L)

- 1.6 The Department for Transport (DfT) Circular 02/2013 states that "Where the overall forecast demand at the time of opening of the development can be accommodated by the existing infrastructure, further capacity mitigation will not be sought. [...] The overall forecast demand should be compared to the ability of the existing network to accommodate traffic over a period up to ten years after the date of registration of planning application." For this reason, the A180/A1173 Interchange and the A160/A180 Interchange (Brocklesby Interchange) slip roads have been assessed for the 2025 opening year and 2032 future year. The scenarios tested are 'Base + Committed' and 'Base + Committed + Development' in the AM (07:00-08:00) and PM (16:00-17:00) peak periods.
- 1.7 All the merge/ diverge plots for the A180/ A1173 Stallingborough Interchange are attached in **Annex TN5 A** with the plots for the A160/ A180 Brocklesby Interchange attached in **Annex TN5 B**.

# 2.0 A180 / A1173 Stallingborough Interchange

Diverge Slip Roads

- 2.1 To calculate the lane requirements at the diverges the demand flows summarised in Table 1 have been divided by the practical lane capacities (para. 1.3). The larger ratio of demand to capacity from the two peak periods has been rounded up to the nearest whole number to give the worst lane requirement and this is compared to the existing provision. These are summarised in Table 2.
- 2.2 All scenarios for both the eastbound and westbound diverges require 1 lane downstream, 2 lanes upstream and 1 lane on the slip road. In practice two lanes are carried through the junction, i.e., there are two downstream lanes also.

Technical Note 5 – Slip Road Assessments (Annex L)

- 2.3 All the demand flows fall into the bottom left quadrant of the CD122 graph. At this level of traffic, the no specific layout required given the very low levels of demand.
- 2.4 This demand would therefore allow for a lane drop as the downstream demand is well within the capacity of a single lane. In practice, two lanes are carried all the way through the junction in both directions and there are no benefits from dropping a lane.
- 2.5 Both diverges are Layout A arrangements i.e., a direct taper. This is appropriate for the forecast level of mainline and diverging demand. In both cases the development related demand is not a material consideration.

Merge Slip Roads

- 2.6 The merges similarly indicate that there is inherently more capacity within the current layout than the demand necessarily warrants. As such the summary of demand scenarios in **Table 3** shows that the upstream mainline demand could be accommodated within a single lane but that with existing and proposed slip road demands there is a case for the second mainline lane downstream. This would require a lane gain if there were only a single upstream lane but there are currently two lanes upstream and downstream of the junction in both directions. There are no benefits from adding a further lane.
- 2.7 Both merges are Layout A arrangements i.e., a direct taper without auxiliary lane. This is appropriate for the forecast level of mainline and merging demand. In both cases the development related demand is not a material consideration.

Technical Note 5 – Slip Road Assessments (Annex L)

# 3.0 A160 / A180 Brocklesby Interchange

Diverge Slip Roads

- 3.1 As summarised in **Table 4**, all scenarios for both the eastbound and westbound diverges require 2 lanes downstream, 2 lanes upstream and 1 lane on the slip road.
- 3.2 Both diverges are Layout A arrangements i.e., a direct taper. This is appropriate for the forecast level of mainline and diverging demand. In both cases the development related demand is not a material consideration.

Merge Slip Roads

- 3.3 The merges indicate that there is inherently more capacity within the current layout than the demand necessarily warrants. A summary of demand scenarios is set out in **Table 5**.
- 3.4 Both merges are Layout A arrangements i.e., a direct taper without auxiliary lane. This is appropriate for the forecast level of mainline and merging demand. In both cases the development related demand is not a material consideration.

Technical Note 5 – Slip Road Assessments (Annex L)

# 4.0 Conclusions

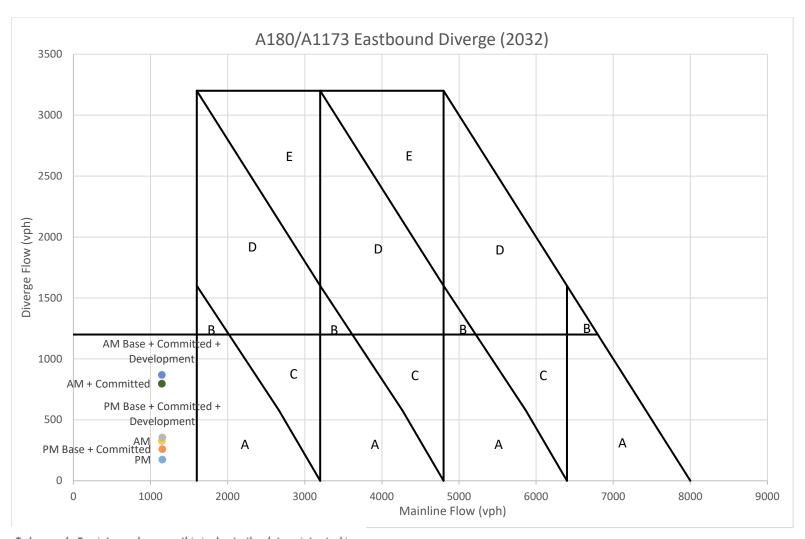

4.1 Therefore, it can be concluded that the current merge and diverge layouts are appropriate (or over provision) for the existing and forecast level of demand. The demand from the development is not material in the context of the overall follows and no alterations are required at the A180/ A1173 Interchange or the A160/ A180 Interchange (Brocklesby Interchange) because of the proposals.

## Annex M

Technical Note 4 – Internal Junction Capacity Assessments (Annex M)

- 1.1 This Technical Note has been produced by DTA to summarise the results of the Internal Junction Capacity Assessments carried out for the Transport Assessment.
- 1.2 The details of the internal junction improvements can be found in Schedule 1 of the DCO application and are shown in Annex A of the TA.
- 1.3 Turning counts were undertaken on Wednesday 20<sup>th</sup> April 2022 at the following internal junctions:
  - Robinson Road/Crescent Access Road Junction
  - East Riverside/ East Dock Road
  - Robinson Road/East Dock Road
  - Robinson Road/Gresley Way
  - Robinson Road/East Riverside
  - Robinson Road/IOT Access Road
- 1.4 A plan of the internal road names can be seen attached at **Annex TN4 A**.
- 1.5 The development traffic is derived as is described in Section 5 of the Transport Assessment. The same assumptions about the distribution have also been used in this assessment (85% of traffic using East Gate and 15% using West Gate).
- 1.6 Assumptions have been made about traffic which will be diverted following the closure of the section of East Riverside to the East of the East Riverside/ East Dock Road junction. These are as follows:
  - All East Riverside East to East Dock Road movements will be diverted to the Robinson Road/East Riverside junction;
  - All East Riverside East to East Riverside West movements will be diverted

through all the junctions listed above to make the East Dock Road to East Riverside West movement;

- All East Dock Road to East Riverside East movements will be diverted to make the East Dock Road to Robinson Road S movement and then move straight through the other junctions to exit the Port; and
- All East Riverside West to East Riverside East movements will be diverted down East Dock Road and then move straight through the other junctions to exit the Port.
- 1.7 The assessments have taken into account growth (TN 1) and operation of the individual junctions has been tested using the industry standard modelling tool of TRL Junctions. The junctions have been assessed for the opening year of 2025 and future year of 2032. The junctions have been assessed as they are at present as the change in geometry at relevant junctions will increase the capacity of the junction.
- 1.8 The junction model considers the performance of priority junctions and roundabouts in isolation from other junctions within the network. The arrival pattern is normally profiled using the ODTAB to replicate unconstrained demand although in practice where the individual junctions are within an urban network external constraints may make this unrealistic.
- 1.9 There are three key performance metrics which are outputs from the modelling. These are the forecast queue length (in vehicles), the average delay (in seconds) and the ratio of flow to capacity (RFC). Convention is that the modelled period is sub-divided into 15-minute time segments and the highest (worst) results during the modelled period are reported.
- 1.10 A junction is considered to be operating at capacity when the Ratio of Flow to Capacity (RFC) is 1. However, generally once the RFC is above 0.85 the junction operational results become less stable due to an exponential relationship within the modelling formula inherent in the modelling software.

Technical Note 4 – Internal Junction Capacity Assessments (Annex M)

Therefore, if an RFC above 0.85 is forecast closer scrutiny and consideration is required.

#### Robinson Road/ Crescent Access Road Priority Junction

1.11 The Robinson Road/ Crescent Access Road Priority Junction has been assessed using the PICADY module of Junctions 10. A summary of the results can be seen in **Table 1** below with the full output attached in **Annex TN4 B**.

Table 1 - Robinson Road/Crescent Access Road Junction Assessment Summary

| NB: A – Robin           | son Road E | ;B-Cresce | ent Access | Road; C – F | Robinson Ro | oad N |  |

1.12 As can be seen above, the maximum RFC of 0.14 is reached during the 2032 Base + Development in the PM peak period for traffic movements from Crescent Access Road to Robinson Road. This indicates that the development traffic will not have a severe impact on the Robinson Road/ Crescent Access Road Priority Junction.

Technical Note 4 – Internal Junction Capacity Assessments (Annex M)

#### East Riverside/ East Dock Road

1.13 The East Riverside/ East Dock Road Priority Junction has been assessed using the PICADY module of Junctions 10. A summary of the results can be seen in Table 2 below with the full output attached in Annex TN4 C.

 Table 2 - Robinson Road/ Crescent Access Road Junction Assessment Summary

| NB: A – Robin           | son Road N | ;B – East D | ock Road; | C - Robins | on Road S |      |  |

1.16 As can be seen above, the maximum RFC of 0.04 is reached during the 2032 Base + Development in the AM peak period for traffic movements from Robinson Road S to Robinson Road N and East Dock Road and in the PM peak period for traffic movements from East Dock Road to Robinson Road S. This indicates that the development traffic will not have a severe impact on the Robinson Road/East Dock Road Priority Junction.

Technical Note 4 – Internal Junction Capacity Assessments (Annex M)

#### Robinson Road/ East Riverside Priority Junction

1.17 The Robinson Road/ East Riverside Priority Junction has been assessed using the PICADY module of Junctions 10. A summary of the results can be seen in Table 4 below with the full output attached in Annex TN4 E.

**Table 4** - Robinson Road/East Riverside Junction Assessment Summary

#### **Data Errors and Warnings**

No errors or warnings

## **Junction Network**

#### **Junctions**

|   | Junction | Name     | Junction type | Arm A Direction | Arm B Direction | Arm C Direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|---|----------|----------|---------------|-----------------|-----------------|-----------------|-----------------------|--------------------|--------------|
| ſ | 1        | untitled | T-Junction    | Two-way         | Two-way         | Two-way         |                       | 0.59               | Α            |

#### **Junction Network**

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 0.59              | Α           |

#### **Arms**

#### **Arms**

| Arm | Name                 | Description | Arm type |
|-----|----------------------|-------------|----------|
| Α   | Robinson Road E      |             | Major    |
| В   | Crescent Access Road |             | Minor    |
| С   | Robinson Road N      |             | Major    |

#### **Major Arm Geometry**

| Arm             | Width of carriageway (m) | Has kerbed central reserve | Has right+turn<br>storage | Visibility for right turn<br>(m) | Blocks? | Blocking queue<br>(PCU) |
|-----------------|--------------------------|----------------------------|---------------------------|----------------------------------|---------|-------------------------|
| Robinson Road N | 8.95                     |                            |                           | 230.4                            | ✓       | 0.00                    |

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

#### **Minor Arm Geometry**

| Arm                  | Minor arm type | Lane width (m) | Visibility to left (m) | Visibility to right (m) |
|----------------------|----------------|----------------|------------------------|-------------------------|
| Crescent Access Road | One lane       | 5.00           | 250                    | 194                     |

#### Slope / Intercept / Capacity

#### **Priority Intersection Slopes and Intercepts**

| Stream | Intercept<br>(PCU/hr) | Slope<br>for<br>A-B | Slope<br>for<br>A-C | Slope<br>for<br>C-A | Slope<br>for<br>C-B |  |
|--------|-----------------------|---------------------|---------------------|---------------------|---------------------|--|
| B-A    | 799                   | 0.128               | 0.324               | 0.204               | 0.464               |  |
| B-C    | 895                   | 0.118               | 0.299               | -                   | -                   |  |
| С-В    | 707                   | 0.239               | 0.239               | -                   | -                   |  |

The slopes and intercepts shown above include custom intercept adjustments only.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

## **Traffic Demand**

#### **Demand Set Details**

| ID | Scenario name | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |
|----|---------------|------------------|----------------------|--------------------|---------------------|---------------------------|-------------------|
| D1 | 2022 Base     | AM               | ONE HOUR             | 06:45              | 08:15               | 15                        | ✓                 |

| Vehicle mix varies over turn | Vehicle mix varies over entry | Vehicle mix source | PCU Factor for a HV (PCU) |

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of Av. delay per arriving vehicle.

### File summary

### **File Description**

| Title       |            |
|-------------|------------|
| Location    |            |
| Site number |            |
| Date        | 18/05/2022 |
| Version     |            |
| Status      | (new file) |
| Identifier  |            |
| Client      |            |
| Jobnumber   |            |
| Enumerator  | DTA\arcady |
| Description |            |
|             |            |

### Units

| Distance units | Speed units | Traffic units input | Traffic units results | Flow units | Av. delay units | Total delay units | Rate of delay units |
|----------------|-------------|---------------------|-----------------------|------------|-----------------|-------------------|---------------------|
| m              | kph         | PCU                 | PCU                   | perHour    | s               | -Min              | perMin              |

### **Analysis Set Details**

| ID        | Include in report | Network flow scaling factor (%) | Network capacity scaling factor (%) |  |  |
|-----------|-------------------|---------------------------------|-------------------------------------|--|--|
| <b>A1</b> | ✓                 | 100.000                         | 100.000                             |  |  |

# **2022** Base, AM

#### **Data Errors and Warnings**

| Severity | Area            | Item | Description   |
|----------|-----------------|------|---|
| Warning  | Minor arm flare |      | Is flare very short? Estimated flare length is zero but has been increased to 1 because a zero flare length is not allowed. |
| Warning  | Major arm width |      | For two-way major roads, please interpret results with caution if the total major carriageway width is less than 6m.        |

# **Junction Network**

#### **Junctions**

| Junction | Name     | Junction type | Arm A Direction | Arm B Direction | Arm C Direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|----------|----------|---------------|-----------------|-----------------|-----------------|-----------------------|--------------------|--------------|
| 1        | untitled | T-Junction    | Two-way         | Two-way         | Two-way         |                       | 0.00               | Α            |

#### **Junction Network**

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 0.00              | Α           |

# Arms

#### **Arms**

| Arm | Name             | Description | Arm type |
|-----|------------------|-------------|----------|
| Α   | East Riverside E |             | Major    |
| В   | East Dock Road   |             | Minor    |
| С   | East Riverside W |             | Major    |

#### **Major Arm Geometry**

|     | Arm            | Width of carriageway (m) | Has kerbed central reserve | Has right-turn storage | Visibility for right turn (m) | Blocks? | Blocking queue (PCU) |
|-----|----------------|--------------------------|----------------------------|------------------------|-------------------------------|---------|----------------------|
| Eas | st Riverside W | 5.87                     |                            |                        | 130.7                         | ✓       | 0.00                 |

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

#### **Minor Arm Geometry**

| Arm            | Minor arm<br>type   | Width at give-way (m) | Width at<br>5m (m) | Width at<br>10m (m) | Width at<br>15m (m) | Width at<br>20m (m) | Estimate flare length | Flare length<br>(PCU) | Visibility to<br>left (m) | Visibility to right (m) |
|----------------|---------------------|-----------------------|--------------------|---------------------|---------------------|---------------------|-----------------------|-----------------------|---------------------------|-------------------------|
| East Dock Road | One lane plus flare | 10.00                 | 3.91               | 2.83                | 2.69                | 2.68                | ✓                     | 1.00                  | 250                       | 71                      |

### Slope / Intercept / Capacity

### **Priority Intersection Slopes and Intercepts**

| Stream | Intercept<br>(PCU/hr) | Slope<br>for<br>A-B | Slope<br>for<br>A-C | Slope<br>for<br>C-A | Slope<br>for<br>C-B |
|--------|-----------------------|---------------------|---------------------|---------------------|---------------------|
| B-A    | 622                   | 0.114               | 0.288               | 0.181               | 0.411               |
| B-C    | 802                   | 0.124               | 0.313               | -                   | -                   |
| С-В    | 650                   | 0.253               | 0.253               | -                   | -                   |

The slopes and intercepts shown above include custom intercept adjustments only.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

# **Traffic Demand**

### **Demand Set Details**

| ID | Scenario name | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |
|----|---------------|------------------|----------------------|--------------------|---------------------|---------------------------|-------------------|
| D1 | 2022 Base     | AM               | ONE HOUR             | 06:45              | 08:15               | 15                        | ✓                 |

| Vehicle mix varies over turn | Vehicle mix varies over entry | Vehicle mix source | PCU Factor for a HV (PCU) |
|------------------------------|-------------------------------|--------------------|---------------------------|
| ✓                            | ✓                             | HV Percentages     | 2.00                      |

### **Demand overview (Traffic)**

| Arm              | Linked arm | Profile type | Use O-D data | Av. Demand (PCU/hr) | Scaling Factor (%) |
|------------------|------------|--------------|--------------|---------------------|--------------------|
| East Riverside E |            | ONE HOUR     | ✓            | 8                   | 100.000            |
| East Dock Road   |            | ONE HOUR     | ✓            | 2                   | 100.000            |
| East Riverside W |            | ONE HOUR     | ✓            | 3                   | 100.000            |

# **2022 Base, PM**

#### **Data Errors and Warnings**

| Severity | Area Item       |  | Description   |
|----------|-----------------|--|---|
| Warning  | Minor arm flare |  | Is flare very short? Estimated flare length is zero but has been increased to 1 because a zero flare length is not allowed. |
| Warning  | Major arm width |  | For two-way major roads, please interpret results with caution if the total major carriageway width is less than 6m.        |

# **Junction Network**

#### **Junctions**

| Junction | Name     | Junction type | Arm A Direction | Arm B Direction | Arm C Direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|----------|----------|---------------|-----------------|-----------------|-----------------|-----------------------|--------------------|--------------|
| 1        | untitled | T-Junction    | Two-way         | Two-way         | Two-way         |                       | 9.53               | Α            |

#### **Junction Network**

| Driving side | Lighting       | Network delay (s) | Network LOS |  |
|--------------|----------------|-------------------|-------------|--|
| Left         | Normal/unknown | 9.53              | Α           |  |

# **Traffic Demand**

#### **Demand Set Details**

| ID | Scenario name | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |
|----|---------------|------------------|----------------------|--------------------|---------------------|---------------------------|-------------------|
| D2 | 2022 Base     | PM               | ONE HOUR             | 15:45              | 17:15               | 15                        | ✓                 |

| Vehicle mix varies over turn | Vehicle mix varies over entry | Vehicle mix source | PCU Factor for a HV (PCU) |  |
|------------------------------|-------------------------------|--------------------|---------------------------|--|
| ✓                            | ✓                             | HV Percentages     | 2.00                      |  |

#### **Demand overview (Traffic)**

| Arm              | Linked arm | Profile type | Use O-D data | Av. Demand (PCU/hr) | Scaling Factor (%) |
|------------------|------------|--------------|--------------|---------------------|--------------------|
| East Riverside E |            | ONE HOUR     | ✓            | 4                   | 100.000            |
| East Dock Road   |            | ONE HOUR     | ✓            | 7                   | 100.000            |
| East Riverside W |            | ONE HOUR     | ✓            | 3                   | 100.000            |

#### **Data Errors and Warnings**

| Severity | Area            | Item                                     | Description   |
|----------|-----------------|--|---|
| Warning  | Minor arm flare | East Dock Road -<br>Minor arm geometry   | Is flare very short? Estimated flare length is zero but has been increased to 1 because a zero flare length is not allowed. |
| Warning  | Major arm width | East Riverside W -<br>Major arm geometry | For two-way major roads, please interpret results with caution if the total major carriageway width is less than 6m.        |

# **Junction Network**

#### **Junctions**

|   | Junction | Name     | Junction type | Arm A Direction | Arm B Direction | Arm C Direction | Use circulating lanes | Junction Delay (s) | Junction LOS |

# 2025 + Development, AM

#### **Data Errors and Warnings**

| Severity | Area  | Item | Description   |
|----------|---|------|---|
| Warning  | Warning Minor arm flare East Dock Road - Minor arm geometry |      | Is flare very short? Estimated flare length is zero but has been increased to 1 because a zero flare length is not allowed. |
| Warning  | Major arm width   |      | For two-way major roads, please interpret results with caution if the total major carriageway width is less than 6m.        |

# **Junction Network**

#### **Junctions**

|   | Junction | Name     | Junction type | Arm A Direction | Arm B Direction | Arm C Direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|---|----------|----------|---------------|-----------------|-----------------|-----------------|-----------------------|--------------------|--------------|

# 2025 + Development, PM

#### **Data Errors and Warnings**

| Severity | Warning Minor arm flare East Dock Road - Minor arm geometry  Warning Major arm width East Riverside W - |  | Description   |  |  |  |
|----------|---|--|---|--|--|--|
| Warning  |   |  | Is flare very short? Estimated flare length is zero but has been increased to 1 because a zero flare length is not allowed. |  |  |  |
| Warning  |   |  | For two-way major roads, please interpret results with caution if the total major carriageway width is less than 6m.        |  |  |  |

# **Junction Network**

# **2032** Base, AM

#### **Data Errors and Warnings**

| Severity | Area            | Item | Description   |
|----------|-----------------|------|---|
| Warning  | Minor arm flare |      | Is flare very short? Estimated flare length is zero but has been increased to 1 because a zero flare length is not allowed. |
| Warning  | Major arm width |      | For two-way major roads, please interpret results with caution if the total major carriageway width is less than 6m.        |

# **Junction Network**

#### **Junctions**

| Junction | Name     | Junction type | Arm A Direction | Arm B Direction | Arm C Direction | Use circulating lanes | Junction Delay (s) | Junction LOS |

# **2032 Base, PM**

#### **Data Errors and Warnings**

| Severity | Area Item       |  | Description   |
|----------|-----------------|--|---|
| Warning  | Minor arm flare |  | Is flare very short? Estimated flare length is zero but has been increased to 1 because a zero flare length is not allowed. |
| Warning  | Major arm width |  | For two-way major roads, please interpret results with caution if the total major carriageway width is less than 6m.        |

# **Junction Network**

#### **Junctions**

| Junction | Name     | Junction type | Arm A Direction | Arm B Direction | Arm C Direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|----------|----------|---------------|-----------------|-----------------|-----------------|-----------------------|--------------------|--------------|
| 1        | untitled | T-Junction    | Two-way         | Two-way         | Two-way         |                       | 9.53               | Α            |

#### **Junction Network**

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 9.53              | Α           |

# **Traffic Demand**

#### **Demand Set Details**

| ID | Scenario name | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |
|----|---------------|------------------|----------------------|--------------------|---------------------|---------------------------|-------------------|
| D8 | 2032 Base     | PM               | ONE HOUR             | 15:45              | 17:15               | 15                        | ✓                 |

| Vehicle mix varies over turn | Vehicle mix varies over entry | Vehicle mix source | PCU Factor for a HV (PCU) |
|------------------------------|-------------------------------|--------------------|---------------------------|
| ✓                            | ✓                             | HV Percentages     | 2.00                      |

## **Demand overview (Traffic)**

| Arm              | Linked arm | Profile type | Use O-D data | Av. Demand (PCU/hr) | Scaling Factor (%) |
|------------------|------------|--------------|--------------|---------------------|--------------------|
| East Riverside E |            | ONE HOUR     | ✓            | 4                   | 100.000            |
| East Dock Road   |            | ONE HOUR     | ✓            | 7                   | 100.000            |
| East Riverside W |            | ONE HOUR     | ✓            | 3                   | 100.000            |

# 2032 + Development, AM

#### **Data Errors and Warnings**

| Severity | ty Area Item    |  | Description   |
|----------|-----------------|--|---|
| Warning  | Minor arm flare |  | Is flare very short? Estimated flare length is zero but has been increased to 1 because a zero flare length is not allowed. |
| Warning  | Major arm width |  | For two-way major roads, please interpret results with caution if the total major carriageway width is less than 6m.        |

# **Junction Network**

#### **Junctions**

| Junction | Name     | Junction type | Arm A Direction | Arm B Direction | Arm C Direction | Use circulating lanes | Junction Delay (s) | Junction LOS |

#### **Data Errors and Warnings**

| Severity                    | everity Area Item   |  | Description  |  |  |  |
|-----------------------------|---|--|--|--|--|--|
| I Warning I Minor arm flare |   | East Dock Road -<br>Minor arm geometry | Is flare very short? Estimated flare length is zero but has been increased to 1 because a zero flare length not allowed. |  |  |  |
| Warning                     | Warning Major arm width East Riverside W - Major arm geometry |  | For two-way major roads, please interpret results with caution if the total major carriageway width is less than 6m.     |  |  |  |

# **Junction Network**

#### **Junctions**

| Junction | Name     | Junction type | Arm A Direction | Arm B Direction | Arm C Direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|----------|----------|---------------|-----------------|-----------------|-----------------|-----------------------|--------------------|--------------|
| 1        | untitled | T-Junction    | Two-way         | Two-way         | Two-way         |                       | 9.85               | Α            |

#### **Junction Network**

| Driving side Lighting |                | Network delay (s) | Network LOS |

Values shown are the highest values encountered over all time segments. Delay is the maximum value of Av. delay per arriving vehicle.

## File summary

#### **File Description**

| Title       |            |
|-------------|------------|
| Location    |            |
| Site number |            |
| Date        | 18/05/2022 |
| Version     |            |
| Status      | (new file) |
| Identifier  |            |
| Client      |            |
| Jobnumber   |            |
| Enumerator  | DTA\arcady |
| Description |            |

#### Units

| Distance units | Speed units | Traffic units input | Traffic units results | Flow units | Av. delay units | Total delay units | Rate of delay units |
|----------------|-------------|---------------------|-----------------------|------------|-----------------|-------------------|---------------------|
| m              | kph         | PCU                 | PCU                   | perHour    | s               | -Min              | perMin              |

#### **Data Errors and Warnings**

No errors or warnings

## **Junction Network**

#### **Junctions**

| Junction | Name     | Junction type | Arm A Direction | Arm B Direction | Arm C Direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|----------|----------|---------------|-----------------|-----------------|-----------------|-----------------------|--------------------|--------------|
| 1        | untitled | T-Junction    | Two-way         | Two-way         | Two-way         |                       | 1.02               | А            |

#### **Junction Network**

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 1.02              | Α           |

#### **Arms**

#### **Arms**

| Arm | Name            | Description | Arm type |
|-----|-----------------|-------------|----------|
| Α   | Robinson Road W |             | Major    |
| В   | East Riverside  |             | Minor    |
| С   | Robinson Road E |             | Major    |

#### **Major Arm Geometry**

| Arm             | Width of carriageway (m) | Has kerbed central reserve | Has right-turn<br>storage | Visibility for right turn<br>(m) | Blocks? | Blocking queue<br>(PCU) |
|-----------------|--------------------------|----------------------------|---------------------------|----------------------------------|---------|-------------------------|
| Robinson Road E | 9.29                     |                            |                           | 250.0                            | ✓       | 0.00                    |

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

#### **Minor Arm Geometry**

| Arm            | Minor arm<br>type      | Width at give-way (m) | Width at<br>5m (m) | Width at<br>10m (m) | Width at<br>15m (m) | Width at<br>20m (m) | Estimate flare length | Flare length<br>(PCU) | Visibility to left (m) | Visibility to right (m) |
|----------------|------------------------|-----------------------|--------------------|---------------------|---------------------|---------------------|-----------------------|-----------------------|------------------------|-------------------------|
| East Riverside | One lane<br>plus flare | 10.00                 | 6.19               | 3.52                | 3.23                | 3.04                | <b>√</b>              | 1.00                  | 96                     | 242                     |

## Slope / Intercept / Capacity

#### **Priority Intersection Slopes and Intercepts**

| Stream | Intercept<br>(PCU/hr) | Slope<br>for<br>A-B | Slope<br>for<br>A-C | Slope<br>for<br>C-A | Slope<br>for<br>C-B |
|--------|-----------------------|---------------------|---------------------|---------------------|---------------------|
| B-A    | 676                   | 0.105               | 0.265               | 0.166               | 0.378               |
| B-C    | 835                   | 0.111               | 0.280               | -                   | -                   |
| С-В    | 719                   | 0.239               | 0.239               | -                   | -                   |

The slopes and intercepts shown above include custom intercept adjustments only.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

## **Traffic Demand**

#### **Demand Set Details**

| ID | Scenario name | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |

### **Data Errors and Warnings**

No errors or warnings

## **Junction Network**

#### **Junctions**

| Junction | Name     | Junction type | Arm A Direction | Arm B Direction | Arm C Direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|----------|----------|---------------|-----------------|-----------------|-----------------|-----------------------|--------------------|--------------|
| 1        | untitled | T-Junction    | Two-way         | Two-way         | Two-way         |                       | 0.49               | А            |

#### **Junction Network**

| Driving side Lighting |                | Network delay (s) | Network LOS |
|-----------------------|----------------|-------------------|-------------|
| Left                  | Normal/unknown | 0.49              | Α           |

### **Arms**

#### **Arms**

| Arm | Name            | Description | Arm type |
|-----|-----------------|-------------|----------|
| Α   | Robinson Road S |             | Major    |
| В   | Gresley Way     |             | Minor    |
| С   | Robinson Road N |             | Major    |

### **Major Arm Geometry**

| Arm             | Width of carriageway (m) | Has kerbed central reserve | Has right+turn<br>storage | Visibility for right turn<br>(m) | Blocks? | Blocking queue<br>(PCU) |
|-----------------|--------------------------|----------------------------|---------------------------|----------------------------------|---------|-------------------------|
| Robinson Road N | 8.26                     |                            |                           | 88.6                             | ✓       | 0.00                    |

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

### **Minor Arm Geometry**

|             |                        | <u> </u>                  |                    |                     |                     |                     |                       |                       |                        |                         |

| Gresley Way | One lane<br>plus flare | 10.00                     | 5.99               | 5.29                | 5.28                | 5.27                | <b>√</b>              | 3.00                  | 214                    | 108                     |

### Slope / Intercept / Capacity

#### **Priority Intersection Slopes and Intercepts**

| •      |                       |                     |                     |                     |                     |
|--------|-----------------------|---------------------|---------------------|---------------------|---------------------|
| Stream | Intercept<br>(PCU/hr) | Slope<br>for<br>A-B | Slope<br>for<br>A-C | Slope<br>for<br>C-A | Slope<br>for<br>C-B |
| B-A    | 649                   | 0.108               | 0.273               | 0.172               | 0.390               |
| B-C    | 667                   | 0.091               | 0.230               | -                   | -                   |
| С-В    | 625                   | 0.218               | 0.218               | -                   | -                   |

The slopes and intercepts shown above include custom intercept adjustments only.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

# **Traffic Demand**

### **Demand Set Details**

| ID | Scenario name | Time Period name | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) | Run automatically |

## **Data Errors and Warnings**

No errors or warnings

## **Junction Network**

#### **Junctions**

| Junction | Name     | Junction type | Arm A Direction | Arm B Direction | Arm C Direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|----------|----------|---------------|-----------------|-----------------|-----------------|-----------------------|--------------------|--------------|
| 1        | untitled | T-Junction    | Two-way         | Two-way         | Two-way         |                       | 1.22               | А            |

#### **Junction Network**

| Driving side | Lighting       | Network delay (s) | Network LOS |  |
|--------------|----------------|-------------------|-------------|--|
| Left         | Normal/unknown | 1.22              | Α           |  |

## **Arms**

## **Arms**

| Arm | Name            | Description | Arm type |
|-----|-----------------|-------------|----------|
| Α   | Robinson Road N |             | Major    |
| В   | IOT Access Road |             | Minor    |
| С   | Robinson Road S |             | Major    |

## **Major Arm Geometry**

| Arm             | Width of carriageway Has kerbed central (m) reserve |  | Has right-turn<br>storage | Visibility for right turn<br>(m) | Blocks? | Blocking queue<br>(PCU) |
|-----------------|---|--|---------------------------|----------------------------------|---------|-------------------------|
| Robinson Road S | 11.65   |  |                           | 98.6                             | ✓       | 0.00                    |

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

## **Minor Arm Geometry**

| Arm             | Minor arm<br>type   | Width at give-way (m) | Width at<br>5m (m) | Width at<br>10m (m) | Width at<br>15m (m) | Width at<br>20m (m) | Estimate flare length | Flare length<br>(PCU) | Visibility to left (m) | Visibility to right (m) |
|-----------------|---------------------|-----------------------|--------------------|---------------------|---------------------|---------------------|-----------------------|-----------------------|------------------------|-------------------------|
| IOT Access Road | One lane plus flare | 10.00                 | 7.04               | 5.75                | 5.74                | 5.27                | <b>✓</b>              | 3.00                  | 250                    | 160                     |

## Slope / Intercept / Capacity

#### **Priority Intersection Slopes and Intercepts**

| Stream | Intercept<br>(PCU/hr) |       |       | Slope<br>for<br>C-A | Slope<br>for<br>C-B |
|--------|-----------------------|-------|-------|---------------------|---------------------|
| B-A    | 575                   | 0.079 | 0.200 | 0.126               | 0.285               |
| B-C    | 861                   | 0.100 | 0.252 | -                   | -                   |
| С-В    | 631                   | 0.184 | 0.184 | -                   | -                   |

The slopes and intercepts shown above include custom intercept adjustments only.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

## **Traffic Demand**

## **Demand Set Details**

| ID | Scenario name   Time Period name   Traffic profile type |    | Start time (HH:mm) Finish time (HH:mm) |       | Time segment length (min) | Run automatically |   |
