

ISH5 Action Point 5 - Most Challenging Day Scenario Post-Construction

The ExA has asked the Applicant to produce a graphic to explain how the river would handle traffic on 'the most challenging day' and directed the Applicant to work with other IP's to decide upon on what the traffic movements might look like on such a day.

Given the challenges relate to the integration of future IERRT traffic into the Immingham area we are only considering the periods 0500-0800/1800-2100 and limiting the geographic range from Sunk Spit to HST.

Given the lack of detail surrounding the movements associated with the Construction phase we do not feel suitably equipped to suggest movements connected to this and therefore ask the Applicant to propose a list of movements we could agree to.

Tidal Conditions: Peak Spring Tide
